justanother Q: is Apex special Falcon-related SW? (Using the DSP).
To put it slightly different: does it run on a TT030?

Nu use fetching it when it won't work on my machine :-)

1874. Damage by switching printer connection?

Newsgroup: comp.sys.atari.st
Date: 1998-04-26 00:00:00 UTC
From: john@JCordes.Phys.Dal.Ca
Message-ID: <6hvume$34g$1@News.Dal.Ca>
Source record: 102248
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I remember hearing many years ago that 'hot plugging' a printer to
an Atari computer could cause serious damage. In particular, one person's sad
tale remains etched in my memory: he reported that by plugging his printer in
while the computer was on had caused fatal damage to at least one chip in the
computer. Needless to say, I've been careful not to do that myself.

My situation now is this: I've got a printer (HP DeskJet 600) connected via
a switchbox (A/B) to both my MSTE and a Pentium. And the question of course
is: is it safe to toggle from one computer to the other using the switchbox
without powering off the Atari. People seem to do this all the time with PC's,
but I'm worried about the ST.

Any comments?

Thanks,
John

True, it's an ugly technique. It's a variation
on the time-worn method of testing the drive
to see if there's an existing file with the same
name before opening a new file for writing output
data.

Fortunately, the system works even in systems
that don't support cookies.

Until some 5 months ago I was using a TTM195 connected to the TT's
monitor port and a 17 inch color screen connected to the RGB Video
port of a Creazy Dots II graphic card without any problem. I only had
to choose between two different setups at boottime. One for the
monochrome screen and one for the color screen. It's so that the first
part of the booting (memory test, scanning for connected hardware,
xboot) was done on the TTM195 but after this the rest was shown on the
color screen.

I really don't see the need why a hobbyist must be able to run Calamus with
more then 256 colors. The dithering is so good that one can hardly see
the differents between 256 color mode and true color mode.
Furthermore running in true color things will slown down seriously.
Also true color mode eats lots of memory.

Hi Steve,

The only place I know of that sells what you're looking for is Wizztronics, in USA. They make 3 versions of a "cartridge extender". Check out their web page... www.wizztronics.com ... The connector on the Atari is a rather odd size - I went to many stores in search of one, even a place called "Connector World" (!), and no luck. It's much easier to just buy one already assembled with the proper connector on each end of a 1 foot ribbon cable.

Bonsoir,

Dans l'article <354cbcf2.7533550@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :
??Hey! curis@news.ens.fr (Emmanuel Curis) wasn't it 24 Apr 1998 23:26:48
??GMT that you wrote:
??
??
??> Let's be serious : if one needs that programm, that means one handle a
??>huge Web site, no ? Don't you think these machines are really more suited for
??>that than ST & Mega ST?? So why not support them?? I can't see any reason, for
??
??Sorry but thats total rubish, we are talking about a collection of
??ASCII files, thats all..

Images are ASCII files for you ? Great news !

? any machine capable of ascii output and
??storage is capable of maintaining a large web site for on or offline
??usage, thats fact...

Web site for offline ? Is that really interesting ?

? Also falcons and TT are not normally classed as
??lesser machines, and I already stated they will definatly be
??supported..

I didn't say anything about TT/Falcon support, I just said it's rather
strange to support ST and not Hades.

??At the end of the day..ANY machine capable of the resolution set, will
??be able to run the program,

That means no Hades and no Milan, no graphic card,... To preview web
sites with images [didn't you spoke of ways to change the background for many
files at the same time ?], don't you think 640?400?2 is a little poor?? And
that the user that has even a Falcon woth 640?400?256 will be a little
desappointed ? Same thing for the TT owner ?

??> What is the reason to avoid GEM??
??
??I dont like GEM...I hate GEM... I think GEM SUX big time!,

And is that a reason to make things that don't run on other things
than 640?200?4 ?

>> In another way : first bug report, ��doesn't work on hades��.
>>
>>ok... but then again it wasn't targeted at hades, its not in the spec,
>>so hardly a bug :)

It definitly is, as there's no serious reason to do that. The only
understandable reason for which a programm should not run on the hades is the
lack of dsp. I don't think you need a dsp for you soft...

>> I may seem angry... I'm a little : i don't like when a programm
>>doesn't work on my computer, but I really HATE when a programm is made to NOT
>>work on it for some strange, unjustified reasons.
>>
>>To put this as plain and simple as I can....If I had a Hades then I
>>would make lots of software for it.. I don't have access to a Falcon
>>or TT but have learnt enough over the years to be able to support
>>them... Hades Milan?.... I don't even know what one looks like... If
>>you see my meaning..

It's not hard at all to make your soft usable on Hades/Milan : you just
have to allow something else than 640200 4... Even ST-high would work - but
not very comfortable...

Hello,

Dans l'article <35430e50.28367073@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :
??Hey! louis@holleman.demon.nl (Louis Holleman) wasn't it Sat, 25 Apr
??1998 16:18:17 GMT that you wrote:
??
???>I simply agree. As far as I'm concerned, I'd say: make it MagiC-compatible.
??
??If you read the whole thread before posting then you may understand
??that MagiC is not an option and is a non debatable point, it isnt a
??matter of making choices, if it was then these would be included
??without even thinking about it of course..... but its not a choice.

What do you mean exactly by ??not a choice?? ? Does it mean you don't
know how to make the programm MagiC, hades,... compatible ?

Well, two rules?:
- always use VDI calls, especially for getting resolution?;
- use GEM as much as possible.

The first one is the most important : I think, if you makes it
seriously, you're own interface should work on any resolution, if you makes the
proper resizment according to the values given by VDI calls.

For the second one : many GEM libs exists - it depends of which
langage you're using, of course - to make its usage simplier. And, as
suggested by other messages, one can help you to make the GEM part. I mean,
just separate clearly what's the main programm and what's your own interface,
then allow someone to make the GEM equivalent of the interface part, and
everything is OK... You'll be able to use your programm with your own
interface, ST-Falcon users will have choice and hades/milan/multitasking users
will still be able to run the programm.

If you use C, I can even provide a GEM/X library what would allow to
compile the prog for both GEM or X-Windows without any changes... [not
actually finished, but should be in about one month - cross fingers :-)]

Hi,

I just found a load of old ST disks under the bed..

Don't know if they're any good to anyone, but I'd rather give 'em to
one of you guys than throw them out.

So, if anyone's interested let me know & I'll put them in the post for
ya (UK only).

I can't guarantee that they work, but since they're free you can't
really complain! :o)

ST User
=======

28 disks between August 1990 - December 1993

ST Format
=========

54 disks ranging from issue 8 to issue 54

ST Review
=========

19 Disks hmmm.. most of these don't have a number or date on!

There's some games too, but none have boxes or instructions & some
might need passwords which I've lost years ago :-(

SimCity
Hard Drivin'
Starglider2
Strider2
New Zealand Story
Hyperpaint
Kickoff2
International Soccer Challenge
Sleepwalker (STE)
Populous
Ozone
Chaos Strikes Back
joe Blade
Xenon2
Vaxine (definitely needs codewheel to run)
Gods
Powermonger.

There's also a couple of books:

Atari ST Machine Language by Abacus Software (Bit Techy ;)

Introducing Atari ST Machine code by Roger Pearson (zzSoft) + Disk of examples. (Brilliant for beginners)

So there ya go..!

I'd rather send the disks off all together, but I'll send the books seperately.

> driver.

The hard drive installs easily enough, but when clicked, it claims that
the drive does not exist, and suggests that I check/change the identifier.
Does this mean I need to load a driver? To further confuse matters, I did
manage once to get the ST to detect the hard drive *automatically* upon
startup (completely by accident), but when clicked, it showed no files or
bytes used and wouldn't let me save the desktop configuration. I haven't
been able to repeat this; but I thought it might shed some light.

Unfortunately, the floppy drives are equally useless regardless of the
state of the hard drive, so even getting a driver on floppy won't help
much until I can load it. :(

Thanks again to all!

peace,
-Kev-

Bonsoir,

Dans l'article <3546b254.43059438@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a crit :

>>>matter of making choices, if it was then these would be included
>>>without even thinking about it of course..... but its not a choice.
>>
>> What do you mean exactly by not a choice ? Does it mean you don't
>>know how to make the programm MagiC, hades,... compatible ?
>>
Not it means I am limited by my working enviroment,

??? It's perfectly possible to make programmes that runs on
magic/milan/hades/whatever atari you want by using a simple 520 ST, no HD,
colour screen. You just have to follow the standard programmation rules. Of
course you can't test yourself that they really work, but if you don't make
things that makes them clearly impossible to work (like hardcoding some screen
parameters), there's no reason that makes them crash on hades.

>> - always use VDI calls, especially for getting resolution;
>> - use GEM as much as possible.
>>
Ho dear....read the thread,, I dont use GEM, I dont like GEM, I think
GEM SUX big time, would you like me to draw you a picture or do you
think the penny might drop some time soon ?
>>
PLEASE READ THE THREAD BEFORE YOU POST!

I perfectly read. Did YOU read the end of my post ? Do you hate GEM so
much that you don't event want to allow someone else to make a GEM interface
for users that won't be able to use the programm without that, in addition to
your own interface ? Are you so attached to the medium rez that you don't even
want to try to make your own interface adapting to other resolutions ?

>
>tesl-l::0:0:Ross macIver:f:\o\home\josdb:sh

This is exactly the situation - I end up with several .txt files.
I'll try out your suggestion. It occured to me to try something like
this, but the docs seemed to say that each line in the passwd file
would be for a different user, and therefore I'd have to log in
seperately to view each mailbox.

Sometimes the mail arrives addressed to specific person (not me)
rather than to the list name. In this case I'd still have to import
the mail using -u in OIMPORT.

Thanks for the info.

Source record: 102269

Encore bonsoir,

Dans l'article <3544adee.41932814@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :

??>??Sorry but thats total rubish, we are talking about a collection of
??>??ASCII files, thats all..
??>
??> Images are ASCII files for you ? Great news !
??
??Don't be so dammned cheeky
??We are talking about a program for managing HTML files, a HTML file is
??ASCII, we are not talking about a HTML editor or viewer so graphics or
??screen size of the HTML file have nothing to do with the project and
??childish comments like that do nothing for your argument ,

So I reread.
You want to allow the user to insert an image in all selected files,
for instance, no ? What about let the user see the image before inserting ?
Two ways for that :
- allow multitasking -> he can use another programm to choose visually the
image he wants to add
- add yourself a ??view image?? button.
Same thing for background, same thing for...

In other words : it's interesting to allow editing of many HTML files
at one time, but it's more with at least a preview of what it's done - or a
way to test easily the result.
The second way can be easily achieved in a multitasking environnement.
The second one is much more comfortable with a good resolution.

I've understood that you're project is to make an interface to set
many common parameters to a family of HTML files, then edit theses files so
they suit these parameters. Right ?
As soon as some graphical paramaters such as images (for background,
for instance) are involved, I personnally think that a good interface must
allow the user to preview these graphical parameters - not only their
??names??.
Now, suppose I use your programm on my falcon (as on hades it won't
work :-(). I want to edit something -> I go in medium res. I want to check the
result -> I quit, I go to normal res, I test. Not so good -> re-back to
med. res -> ... -> ...
Why change res ? Because if I set a background on my pages, I think
most people will see it in at least 256 colors, not in 4 colors...
Not so friendly, no ? So either a part of these graphical elements can

be seen in your programm -> my remarks are correct I think, either you allow
multitasking to use at the same time other programms to do that.

Now, let's say image is a particular case, added in your programm for
completeness, but not the main aim of it. It's just made to edit HTML texts
(for instance, change the header of all of them).
I'm a atari user, I own a powerful atari clone. I maintain a huge
collection of HTML files, for any reason.
I'm interested by your programm. Recent, so I'm confident : it should
work. I test -> crash. Not sympathical at all.
So, more generally : many programms won't run on hades just because
programmers don't wan't to make the _little_ effort of using standard
coding. I don't think it helps for atari's computers future... And that also
explains why I'm so angry when I heard people insist to make not compatible
programms. There's NO good reason to do that, except taking advantage of a
specific powerful chip specific of one of the computer. The examples are
- using DSP on falcon only;
- using 68040 or 68060 specificities on machines with it;
- using DMA for special things.
Is you're programm in one of that 3 cases? I really don't think so.

Last thing, the people interested by your programm.
As pointed out in other messages, it's nearly certain that a big part
of people using atari for _creating_ web pages or HTML docs are using enhanced
atari computers. Especially multitasking OS like magic or N.AES. So make your
programm usable with them is important.
By the way, the job for that is exactly the same that for make it
compatible with newer atari computers.

>>storage is capable of maintaining a large web site for on or offline
>>usage, thats fact...
>>
>> Web site for offline ? Is that really interesting ?
>>
>>Another childish remark..what gives?
>>Good grief man.. Look around you, HTML is a Hyper Text Markup
>>Lamguage, show me a better Multimedia authoring package for the ATARI
>>?. Have you not heard of HTML Diskmagazine, Catalogues or Multimedia
>>presentations,

Ok, I forgot these ones - I don't use them myself has I never found
any pleasant to read (I prefer real paper), I recognize I was wrong here.

>>At the end of the day..ANY machine capable of the resolution set, will
>>be able to run the program,
>>
>> That means no Hades and no Milan, no graphic card,... To preview web
>>sites with images [didn't you spoke of ways to change the background for many
>>
>>It would seem you have not even grasped the basic concept of the

��project, you seem very eager to voice opinions of what you think is
��wrong with the program, yet you don't understand what it is for?.. It
��is NOT for viewing web pages.. ... Read the original message and try
��again :(

See above.
And anyway, preview or not preview, that will make it not run on hades
or any newer atari clone which is clearly unacceptable for a recent programme!
That is the main point, and you'll never convince me that there are good
reasons for that. All other things I say are examples for which another
resolution than 640�200�4 may be better - but the main fact is that�: why not
allow your programm to run on _all_ TOS computers�?

��>files at the same time ?], don't you think 640�400�2 is a little poor�? And
��
��As stated.. I think your grasp of the project is poor, please try to
��understand what you are talking about... before pressing the send
��button...

It's possible we don't imagine a ��good interface for that�� the same
way...
In addition to the examples I gave above :

AN INTERFACE THAT CAUSES A PROGRAMM TO CRASH ON A SPECIFIC COMPUTER OR A
SPECIFIC OS (especially on the one existing when it was created) CAN'T BE A
GOOD INTERFACE.

��>that the user that has even a Falcon woth 640�400�256 will be a little
��>desappointed ? Same thing for the TT owner ?
��
��No they will not because the program is for managing large sets of
��HTML files, not for viewing web pages... deary me!

��>��ok... but then again it wasn't targeted at hades, its not in the spec,
��>��so hardly a bug :)
��>
��> It definitly is, as there's no serious reason to do that. The only
��>understandable reason for which a programm should not run on the hades is the
��>lack of dsp. I don't think you need a dsp for you soft...
��
��Again you have no idea what you are talking about and to be quite
��frank you dissapoint me, you at first seemed to have a valid point,
��now your talkin rubish, there are many other reasons, just because YOU
��only know one, does not mean that there are no more does it ?

What other hardware reason do you see for a programm not to run on
Hades ? Hardware reasons are the only good reasons - I mean, really hardware
like a chip missing, not matters of screen size or things like that.
DMA ? Why would you need the DMA for that programm ?
DSP ? It then would run only on a falcon
ACSI bus ? Same as for DMA, and won't run on a falcon
So what ?

Oh yes, Line-A, may be... it's not a good idea to use it, as VDI does
the same thing and as Line-A is officialy not working on TT & falcon (so it
works ��by mistake�� :-), 'cause not supported by 68030 chips (nor by any
graphic card I think...)

��> It's not hard at all to make your soft usable on Hades/Milan : you just
��
��It isn't ?..... you sure about that ?...

Yes am I, except if you choose from the beginning to make not
compatible soft.
The major rule : check resolutions with VDI, not Xbios. That's the main
source of easy-to-avoid problems.
The second major rule : only use documented system addresses.

� then why not stop for a
��second and ask yourself....why I havent ?.. I already stated it wasn't
��from choice... think about it ?

What reason did you gave ?
Material reason - you don't have hades access ? I answered it's not a
matter : if you respect standard rules, no reason it doesn't work. Even if
wrote in GFA basic. And beta-testers are here to check it work, and eventually
to help you for correcting and adapting.
Knowledge reason, for GEM interface : some people proposed you to
allow the use in ttp, and develop a separate shell, so that other people could
also develop the GEM part.
Other knowledge reason : ask here or on comp.sys.atari.programmers (I
think it's the good name ?) and one will help you.
You hate GEM... Sorry, this reason is as stupid for me as you find
stupid mines. And the same arguments as above apply.

��>have to allow something else than 640�200�4... Even ST-high would work - but
��>not very comfortable...
��
��Less than comfortably on my STe and colour monitor...

Hey, is that so difficult to test resolution, so that
-> medium rez ok
-> high rez -> all vertical size * 2, no more color use ?
That's the only thing to do to make it work on ST-high, no ? Even if,
in that case, that won't always be very nice, but at least it then
works. Better than nothing, no ?
Any beta-tester with high res can then check and say ��Hey, in that
box you forgot to make the *2 multiplication�� or things like that.

� ��Try to add a little thought, brains and reasoning to your next post :)

Are you more satisfied with this one ? I'm afraid you won't...

I wrote the following, but could not get thru email --
Some info please -- does it allow you to "cross over" --can I use
Atariprg's
and use the Windows printer drivers? What about speed -- is it faster
than my
ST or just a slow? What aboout Atari prg's that have to be booted?
I have about 1000 Spect5rum Graphics I want to translate fro
Spectrum to
JPEG. On my Atari it takes about 2 1/2 minutes each. Maddening.
What is/ was the original price of the thing -- I remember the maker
was
giving them away as trade for old ST's.
I am interested, but a bit vague about how and how well they work.
Can a
duffer install the thing?

My personnal thought is that the dithering of Calamus is not quite as
good as the Chagall dithering for exemple ... and what about the
printing quality of Calamus ? A shame when you compare it to the
excellent Image Copy ...

>that one can hardly see
>the differents between 256 color mode and true color mode.

I can not accept this assertion ... it's totally wrong Martin ...
except if you don't care personnaly, this is absolutely not true !

>Furthermore running in true color things will slown down seriously.
>Also true color mode eats lots of memory.

Of course my eyes always use the realtime vision mode and my amount
pf memory is quite great compared to the memory of my TT ...
the computer is sometimes useless ... when looking at phenomenons ...

But Martin, put your binoculars on your nose and let's look at mother
nature ... she is in more than 16 millions colors ;)

Your high colored Jo

Hi Hallvard

My set up is exactly the same - Okami and Everest. I've been experimenting with this post, and I don't get the same problem.

In "Paremeters" "Formatting" I have *.* = word wrap (checked), line length (70), automatic indention (checked).

>Anyway... the problem is defining the "format" parameters in the
>"Parameters" -> "Formatting" menu.
>I want text to auto-wrap at around 75 characters per line. This is fine
>at first, since my messages get saved temporarily (while I work on a
>message) as "00000000.tmp" (or similar).
>But if I go back later and edit the message before sending it gets
>another name like "2601181". The problem now is that the "*.*" wildcard
>doesn't seem to incorporate filenames without extensions, thus I get no
>wordwrap!

To edit the message later, I view the message with Okami, select "File" "Edit File" from Okami and the message I am now editing is D:\NOS\SPOOL\ARTICLES_O_OUTB\2520291.

No problems....

I have a question for you now....I subscribe to a couple of listserv groups, which I receive via email. The problem is that these usually come addressed to TESL-L@.... rather than my email address which is rosco@....

Is there a way that I can automatically import these non-rosco emails? At the moment I'm using the -u option of the O-IMPORT to view these "foreign" emails, but I sometimes have 4 or 5 emails that are not addressed to rosco and the importing process becomes a bit of a chore.

Well, just to fling some more minor info into this confusion, some time ago (back when we had several newsstand magazines *counts grey hairs*), at least one of them made great play of the problems of STs not recognising disk swaps, and supplied an auto folder program on a cover disk called Force Media Change (FMC.PRG). This purports to get round the problem by making TOS assume the disk has changed and re-reading the directory structure, if I understood the problem properly. Supposedly stopped it mangling a changed disk by assuming it was the one it last looked at in that drive.

I've had the program in my auto folder since whenever it was and have had no problems. OTOH, I never had any problems before installing the thing so for all I know it's doing nothing worth writing home about.

My point: if it is a myth, it certainly had whichever magazine it was believing it.

In addition, I *have* heard of *major* problems with PCs ignoring floppy swaps with the two main WP packages at least (Word and Word Perfect). Certain outdated areas of our network at work have workstations with no hard drive: they boot off the network and punters are encouraged to save their files to floppies. If you work directly with the floppy (as opposed to copying your files to a network drive while working and then copying the updated files back onto floppy at the end of a session), neither package will recognise a disk change, so if you swap disks they will write to the new disk as if it had the data structure the old one had, mangling it horribly in the process. Apparently the technicians spend half their lives trying to recover students' mangled essays/theses from corrupted disks.

I have quite a load of Atari computer stuff I'd like to sell. I'm in Los Angeles California... willing to ship if you cover the cost ;)

Falcon has 4megs, Internal HD, mouse, system disks
MegaSTE has internal HD, keyboard, mouse, system disks
1040ST has external HD, external floppy (as well as the stock internal) and mouse
I have two monitors, the 1224 and the 1435
Everything is in excellent condition!!!

LMK if you're interested! Maybe send me an initial offer and we'll go from there...
Thanks!
Roagie

Careful!

Look closely at the original poster's request:

> Having only recently acquired a 520ST,
> I hope that someone in this group can
> help me with some (seemingly) simple problems
> that are taking the fun out of owning an Atari. :(

> I've plugged it into the 19(?)-pin HD slot
> in back, and the drive powers up, the fan whirrs,
> but no icon comes on the screen. Do I need to get
> a floppy boot disk, or should the ST detect the
> HD anyway?

Since he's coming from the background of another computer system ... most likely MS-DOS which always demands a boot disk or it cannot start ... it was important to point out that the operating system was internal to the hardware, not external on some drive somewhere.

Note the key point of the request: he was expecting the icon to automatically appear on the screen, a reasonable assumption for a new user. This was the question that I was responding to -- how to access the drive from the desktop.

The whole idea of a "bootstrap loader" (from which the concept of "boot disk" arises) is that the operating system loads itself from some external peripheral before the computer can operate. There is no "boot disk" for Atari computers because the OS is built-in.

If the poster had not indicated they were new to Atari, it would not have been necessary to note the distinction.

By the way, the information you provided is important as far as getting access to the drive once he's got the icon installed and still can't get access. Your information is appreciated!

-- George Crissman
-- strads@tmisnet.com

Maybe the original poster will followup and let
us know which solution worked.

1909. Your Input Needed: How Would YOU Improve TOS/GEM?

Newsgroup: comp.sys.atari.st
Date: 1998-04-26 00:00:00 UTC
From: strads@tmisnet.com
Message-ID: <35428c06.2097728@news.tmisnet.com>
Source record: 102298

I've been having problems posting this ... if you've
seen it twice already, please accept my apologies!
!@#$%^&* Free Agent, someday I'll get my Falcon on-line!

For quite awhile now, Wizztronics
(http://www.wizztronics.com) has been asking
for comments and requests about what we would like
to see in their forthcoming TOS/GEM clone computer.

I've sent in a bunch of email suggestions, and recently
asked when the promised survey would be posted to their
web page. Part of the reply from Steve Cohen read:

>> After reading Email, almost daily I find many users
>> come up with brilliant suggestions. I'm sorry we do
>> not reply to each message sent, it would simply
>> take too much time away from developement.

I asked him if it would be okay to publish this comment
to the Usenet, and he said:

>Yes I have no objections to your request. We want
>users and prospective users to know what's going
>on. We do not want people to think we forgot
>about, or that we do not read their mail. All
>responses received from customers, and users of
>the TOS platform are important to us.

Now is the time to get that suggestion in writing and
emailed off to toscompinfo@wizztronics.com !! You
don't have to be a computer scientist to make a
suggestion, either -- if you've ever said to yourself
"I wish my computer would..." or "I wish I could do
this with my machine...", write it down and send it in!

On other computer platforms, you only get what they
have to offer. On our platform, you get a chance to
directly influence the features and capability of the
next update to the operating system & hardware.

Now's your chance!

1910. Re: Detecting long filenames

Newsgroup: comp.sys.atari.st
Date: 1998-04-26 00:00:00 UTC
From: strads@tmisnet.com
Message-ID: <354295a4.345265@news.tmisnet.com>
Source record: 102299

Hmmm ... haring off into an irrelevant direction,
a quick check of Microsoft Windows shows that
filenames longer than 8.3 use an encoding scheme:

longfilename.html

... becomes something like ...

longfi~1.htm

which probably points at a translation file somewhere
that holds the entire file name.

To test GEM/MagiC/Geneva/etc. for long filenames,
an easy method would be to pick a long filename
such as TESTFILE1.TXT, use it to open a file on
disk, save some information (such as "TESTFILE1.TXT",
then close the file.

Next, reopen the file as "TESTFILE1.TXT". If you get
an error message ("file not found"), you know that long
file names are not supported and that the file you wrote
was saved as (I'm guessing here):
TESTFILE.1TX
or TESTFILE.TXT

At least, that's what I'd try.

-- George Crissman
-- strads@tmisnet.com

BTW: You might direct this idea to Wizztronics, since
they're updating the GEM operating system. A system
inquiry for long file name support should be easy to
implement. Check their web page at http://www.wizztronics.com .

I really can't imagine to use a Nova card, first of all the card is
put itself in an external very big box and if you have to put a second
box added to this "spaghetti system" ... ;)

I can perhaps understand why the Crazy Dots allows the presence of a
second monitor (even an ECL one ...) without the need to unplug any
other monitor: you see Nova cards were really not made to run with atari
VME ports, exactly the Crazy Dots reverse situation, this is perhaps
why my card don't bother if a second monitor is connected ... even
the TTM195 ...
But I'm not a technician :)

>Maybe Jo can tell us more about as he has two monitors connected on
>his TT030. Hï¿½ Jo, c'est a vous maintenant.

Oh Martin, as you know my three screens set-up is quite different ;)
I'm using currently three monitors connected to my TT and they are
always connected without the need to unplug one of them:

On my Crazy Dots card output is connected a Macintosh 15' SVGA and
together on the genuine TT video output are connected a PTC1426 and a
TTM195 ... together yes ... but with a switch box ...

Every thing works perfectly and allows to use any program in its own
required configuration, so it's possible without too much hassle to
switch from my graphic card to the genuine TT video output to play old
games in ST low resolution ...

I have often noticed that it's possible to have sometimes two
screens working together even while you are in the desktop ... but it
don't stay a long time: when running a compatible ST high resolution
on the SVGA 15' and having switched on the PTC1426 it happens that
both screens continue to show the boot operation but also they come
together to the 640*400 desktop ... and it's possible during a few
seconds to see both screens showing the same picture with mouse
pointer moving on both screen !!!
I also know that some programs like Da's Vector were also able to
allow to use two screens together ... But I never went involved
further in this schematic ...

So, for sure it's possible to run two working screens together at the
same time and for what I have heard a long time before it was even
possible to take a graphic object from one screen and cross it to the
other ... but it was another time when I was unable to pay such amount
of money to buy a TT, a graphic card and two monitors ... you must be
aware that I use all in second hand except the SVGA 15' ...

I'm sure some people could be able to answer to these questions on the
maus.de ... but I really can't speak nor write german language ...
only read it sometimes when I need to translate some user manuals or
RSC files ...

I really hope somebody will find which configuration and how to
proceed to obtain two screens working together ... But I really think
until now that you need to work with Calamus or Da's vector programs
with their own "driver module" ...

And while we are busy to talk about graphic cards and so ... I have an essential question which stays without answer for me:
"A lot of people are able to use Calamus under high color resolutions using NOVALCAL.PRG with their Nova graphic card ... it is useless for me with my Crazy Dots ... so, for the moment I'm unable to use Calamus in highcolor resolutions ... where is the same driver program for the Crazy Dots ... I'm sure it exists but WHERE ??????????

Well I have this problem that other ppl have been addressing also. I could not dcc so I downloaded the new modules and replaced all. And then it worked (DCC & FTP send), but after that I realized that my data transfer rate has dramaticly decreased. I have narrowed it down to the tcp module... I know this is the problem.... I know I am not the only one with the problem..... I just hope some ppl get together and this problem can get fixed..... I have addressed the author of the program twice with no results. Sorry Peter, but we need results....

What if you plugged your TTM195 directly into the TT's monitor port,
leaving the PTC1426 and switchbox 'out of the picture'? This would
simulate my situation. It could be that the NOVA knows another RGB
monitor _isn't_ attached to the TT because the TTM195's connector only
has 7 pins instead of 15. Could you try this, Jo?

It ain't pretty but it runs Calamus in high- and true-color modes ;-). I just hang the NOVA box behind the TT -- it can't even be seen unless one looks for it. If I do end up needing a switchbox, connecting it won't have anything to do with the NOVA box anyway.

BTW, within the next day or so I'll search through GEnie's message archives for any references to running Crazy Dots and Calamus with more than 256 colors. Perhaps there's something there.

Well, the message was aimed to be private I think, but Stephane selected
the wrong switch. He says he have the same problem than Steve's ones and
was not aware of the v 0.88 release.

Bye,
/Pascal/

Source record: 102309

George Crissman (strads@tmisnet.com) wrote:
: Hmmm ... haring off into an irrelevant direction,
: a quick check of Microsoft Windows shows that
: filenames longer than 8.3 use an encoding scheme:
:
: longfilename.html
:
: ... becomes something like ...
:
: longfi~1.htm
:
: which probably points at a translation file somewhere
: that holds the entire file name.

Beware, this is only partly true ! W'95 creates those "~1" files on
ordinary FAT systems, but does not use a "translation file". Instead,
it uses an extremely dirty trick : it uses (root) directory entries with
special attributes (System,Volume etc.) to encode the additional info.

Some Atari programs (e.g. Selectric) don't like this it all (obviously,
because they are "illegal" entries). If you encounter problems whilst using
W'95 disks on an Atari, check out :

http://bewoner.dma.be/Septimus/download.htm

(It holds a small program to remove those entries from your A: root dir)

:
: Sorry but thats total rubish, we are talking about a collection of
: ASCII files, thats all.. any machine capable of ascii output and
: storage is capable of maintaining a large web site for on or offline

That is true. But what if I want to use it on my Mint box (with Webserver) ?
Are you going to write an X interface as well ? (don't think so).
Also for the Linux or NetBSD people, it would be nice to have a CLI
version. If you say your program (which sounds terrific) will work on
batches etc., then it would be very nice to be able to use it in a
shell script (e.g. Korn shell).

: usage, thats fact... Also falcons and TT are not normally classed as
: lesser machines, and I already stated they will definatly be
: supported..

Good ! Something just comes to my mind : in what language do you
intend to write it ?

: At the end of the day..ANY machine capable of the resolution set, will
: be able to run the program,

That would be nice, but will it be possible ? I have seen kazillions of
programs for the Atari which work only on a few machines because they
use their "own" interfaces. Of course it all depends on how "dirty" you
code your interface. (I just thought : why don't make a Java application
and make Java VM as well ? <evil laughter> Yes I know : I'm wicked ; must
be that coffee ;-)

: To put this as plain and simple as I can....If I had a Hades then I
: would make lots of software for it.. I don't have access to a Falcon
: or TT but have learnt enough over the years to be able to support
: them... Hades Milan?.... I don't even know what one looks like... If
: you see my meaning..

That's a very important consideration on your side : it its very hard
to develop for "future platforms" or platforms to which you don't have

access for testing. But if you would code it as a TTP, then it should
run on any Atari and even other machine (but that would reduce the
"competitive edge" of our beloved Atari...)

PS: I'm sorry if I played a bit too hard the devil's advocate. I still
think you have I great idea, and I visited your pages several times
and they already have a nice "look-and-feel", so I trust you will
do a great job developing this program.

Sorry, this has to be UK & possibly Europe only.

I am trying to track down the following:

ST Format cover disks: 1, 2, 3, 4, 5, 7 & 13
Atari User cover disks: any March 1988 - April 1990

I don't know how the copyright stands in regards to copies as most of
the stuff on cover disks of these ages are public domain?

ST Review Magazines: Issue 6, Issue 7 & Issue 26.

Octaliser (registered version)
Zero-X

If you have any Dizzy games let me know what you have as I can't
remember which ones have been obtained. Thanks.

Cheers! for now
Steve

>
I've had this- Newsie puts up a forms box with all the optional paths
in. It seems to occur if it can't find one of the files it's looking for
on the path specified- in my case, the .SIG file had vanished without
trace. Presumably it assumes that you have moved a file somewhere else,
and wants to know where you have put it. It doesn't tell you what it's
missing, though. I usually just restore the relevant folders from the
backup which I make -every time- I use Newsie. Keep an eye on the files
which Newsie changes, though (check the date & time stamp)- if you
overwrite e.g. DEFAULT.GRP with an older version, you will force Newsie
to reload a pile of posts you have seen before.

AFAIK, it doesn't matter what is written there as far as a PC is
concerned. I suppose it might check to make sure it is valid ASCII, but
I doubt it. The point is, all the disks with the same name will appear
to an ST to have the same serial number, which is potentially dangerous.

Personally, I wouldn't use it on my HDD- the manual is written in terms
of its use on floppies. It doesn't actually say it won't work on HDD,
but it -does- say make a backup before messing about. I've used it quite
successfully to retrieve data from 720KB 5.25" floppies (80-track)
formatted on a BBC, and some rather unusual formats written by an
Olympus(?), a notetaker for peole with visual disability- it's quite
versatile.

>Also, there must be a more "user friendly" way of making disks work on both

ISTR some of the third-party formatters on the Atari can handle
compatible formats. The formatter in KnifeST claims to, though I haven't
tested it.

1931. New Software! Pretty Midplay now supported in Sweden!

Newsgroup: comp.sys.atari.st
Date: 1998-04-26 00:00:00 UTC
From: kock@kockens.pp.se
Message-ID: <35430fa6.874900@nntpserver.swip.net>
Source record: 102320

Yet another good software from Soft JEE is now supported and sold in Sweden.

Pretty Midplay is a Midifile player for your external devices.
You can play one midifile, a directory of midifiles or make your own playlist.
You can mix/mute all the channels.

There is also a "plug in" record module availible for Pretty Midplay.

Please go to http://home1.swipnet.se/~w-12411 or come.to/kockensbbs
for more info and screenshots, or to make your order. Press the Onlineshop button.

Oh, the price for Pretty Midplay is 200SEK and the record module is 220SEK.

The last statement is true, - but the users are not.
As long as there is new machines coming out (by 3 party), I stay with this modern OS.

At least I don`t have to click 4 times on a menu, and start a program, (I think they call it "Stifinder" or something) just to wiev a text file from the Desktop.

I don`t have to start a program just to se whats on a disk or a directory on my hd.

The list goes on and on.

cheers Joergen

>How do I define this in Everest?

I had similar problems, until I defined the required values to an
entry for *.*. If you save this to your regular everest.inf it might
mess up some of the other things you use it for, though. I get round
this by having the settings for Okami in an everest.inf in the O
folder with O.PRG: Everest looks for an inf file in the current
directory first, before checking its own directory. Handy if there are
other parameters you want to differ between uses. I have .bak creation
turned off for Okami but on for everything else, for example.

Looking at your header, you're using NEWSwatch with Okami so you'll be
using NOS format downloads. Are the mailing list mails being saved to
a separate NOS mailbox file to your normal ones? ie your normal mails
are in a file called rosco.txt and the others are in tesl-l.txt?
If so, just add a tesl-l line to the passwd file. It should come out
something like:

```
tesl-l::0:0:Ross macIver:f:\o\home\josdb:sh
^^^^^^^^^^^^^^^^^^
This has to be there but is ignored so you
don't have to change it (see the docs)
```

Okami will only import NOS maildrops for users in this file, AIUI. In
this context, tesl-l will be a user.

Hi Peter,

Yup, right again... let me explain:
I got this first Sting package, unarced it and looked into the whole structure. It had all the modules in a folder in the stingfolder, like C:\STING\MODULES\, the dialler was in C:\STING\DIALER\ etc. Next I checked the STING.INF and DIAL.INF and they both were C:\STING\ ! So what I did was move the STX-es from \MODULES\ to C:\STING\ and also moved the dialer stuff straight into C:\STING\... and thus everything worked fine (except for some MINOR problems I encountered :-)))))))))

I never changed STING.INF or DIAL.INF...

1937. Wanted where to get cartridge hardware components?

Newsgroup: comp.sys.atari.st
Date: 1998-04-26 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <893592223.5201.0.nnrp-06.c1ed1184@news.demon.co.uk>

HI

What I am after is an extender for the cartridge port. What I would
like is a plug to plug into the cartridge port and having a cable
so that I can use the port in a more convenient place.

Does anyone know where I can get the female socket (where you plug the
cartridge into) or other bits and pieces concerning the production of
cartridge thing bits.

If possible within UK & Europe.

Thanks
Cheers! for now
Steve

Titan Titans don't actual make the AB040.
The RC040 (with built in FPU) version is no longer available. The
LC040 version is currently 399ukp.

E-mail Titan Designs for details on the Afterburner.

This work perfectly as before, you are not aware of each configuration
I have tried ... about anything possible ... no problem :)
Before I found the second hand PTC1426 I only had the TTM195, so ...
It worked perfectly in combination with my graphic card.

Then why does the fact that you put the same old crap up every week &
obviously don't sell anything give you a clue that the suggestion I gave
about the bin is your best line of action.. That or stick them in the
attic for 50 years or so.. At the least just put one posting - 'Atari
crap for sale' instead of 7 or 8 wasting bandwidth..

BTW - I was the once an ST fan when the machine was better than the PC..
Then came the nineties & Atari lost it.. So should you Danny boy - Bin
the lot..

From: gokmase@usa.net
Message-ID: <6hvq55vav1@nnrp1.dejanews.com>
Source record: 102340

Greetings Atarians! 8)

I&#65533;ve been experiencing some problems after adding another 2Mb of ram to my old STe (now 4Mb). I have checked the SIMMS and all 4 megs seem to be recognized by TOS. The problem is that when I try to run CPX modules from COPS 1.07, cops throws a couple of bombs at me. (COPS running as *.ACC)

COPS starts up just fine, but when I try to run any of the CPX's the system hangs. Any ideas what might be wrong?

Thanks in advance!
Regards/

Joakim

Fair enough - WDialog is installed now -

I did find that I didn't get a problem with "Edit nicknames" if I'd already
got another Newsie window open BTW.

>That said, I can get a MagiC exception error if I click that peculiar
>'Register' button in the Newsie Info dialog. No wonder I can't enter
I had no problem with that, pre-WDialog days, and I assume that my post got
out OK.

Yes, due to popular demand, NEWSie does check the Preferences Paths to
be certain they really do exist, and it one or more does not exist, it
opens the Path Options dialog to show you what is there. As for more
explanation of why this is happening at the time, I could spend a lot
of time generating step-by-step debugging that would be used very
infrequently. This was the best I could do for the situation which I
believed would happen to very few users, and only if they moved files,
or deleted them.

>but I'm worried about the ST.

In early years with the ST i do that exactly in the same way.
That works fine, but do not use the switch while the printer is working.

In this moment i had a HP 660 connected to one of my ataris..
The second machine (Falcon) had access to the same printer via MidiCOM.

Saves one cable and that switch, not the fastest way, but realy
easy to use. Works also fine for papyrus, CoMa and also..

I'm not sure that newer MidiCom releases can handle serial transfers..
Ask Harald Blees.. (ST <-> PC)

>

No, the ability to run several CPX is not very important for my either. I just found that COPS offers a *much* better overview over the CPX-modules. It's a shame if there are so many bugs in it, that it won't be reliable with anything but MagiC. (I believe it is written with that in mind)

I recently heard someone in the programmer newsgroup saying something about writing for TOS<-->MagiC. He thought that people really should write applications for TOS, and not for compatible OS. I agree! ...writing for the original Atari-OS, should guarantee that as many as possible could run the program without to much trouble. I don't know whether or not this is why COPS behaves nasty, but if it is, at least I think it's a shame cause otherwise I think COPS is a great program!

I still find it *very* strange that COPS runs more unstable with more memory to play with. Is it possible that it is a memoryhandling bug in TOS that causes this?

Ops... :-) A 'naked' machine :)

Place the falcon on your table as you had an original:

psu connectors dsp-port

floppy
rom internal ide
port

memory board

paddle keyboard-connector
ports

NVRAM

You found the NVRAM in front of your hands..
That's the bigest black block

I hope that helps!
DOITF030 contains the hole stuff about the NVRAM.

Source record: 101948

Hi,

I've used KnifeST extensively on hard disks without problems in the
past, and learnt a lot about rebuilding HDD structures from it's manual,
but if I remember correctly I ran into problems with KnifeST as the size
of partitions rose.

IIRC above 15MB? it started to report a difference between FAT1 and FAT2
when doing a FAT compare (there was no difference).
A new (final?) version was released which did not report a false FAT
difference... however, it didn't report a FAT difference even when there
was one.

It is also not very friendly for enhanced screen resolutions.

I now use DADE.PRG.

As far as floppy compatability issues go, I currently use Kobold (2.5?)
to format 'PC' floppies which are mainly used to exchange data with Macs
and Solaris machines.
In the past I think I found that some PCs didn't read Atari formatted
disks which did not have a particular 3 entries at the start of the FAT.
From memory that was F9 FF FF

I wasn't until I found it by accident! 'Twas a case of archiving 3
partitions at once, under Magic, when I noticed. It's a pity the GEM shell
doesn't.

BTW, the command-line I use/used is:

a -S -5 -r archive path

This results in LH5 compression, recursive checking and case-sensitive
filenames (which could be what enables LFN support)

Not under Magic. It possibly depends on which filesystem you're using.
magic, and the VFAT system, will create a "foo.dat" directory entry, if
the file isn't there, and you want a lower-case name. It also creates the
8+3 entry, which would be "FOO.DAT", so the file is accessible on the 8+3
filesystem. In the example you've given, the filename would still be
"FOO.DAT" as there is an entry that matches it. Other LFN systems may, or
may not, do the same.

No. If "FOO.DAT" exists and you open "foo.dat", Magic will open "FOO.DAT"
as when it creates the "foo.dat" directory entry, the 8+3 filename is
"FOO.DAT". In other words, as far as Magic is concerned, "FOO.DAT"="foo.dat"

I've an interesting question here then. As I have most of the discs
listed, what about zipping the contents and passing that on? Or what
about collecting the same files, or those that can be found, from other
sources and doing the same? The thing here is that as most of the programs,
commercial demos excluded, are free/shareware, then they should be freely
available? If it's just a case of copying the disc, zipping the contents
gets round that as you've not copied the disc, just the contents.

If you don't mind usinfg .TTPs, LHARC v1.13 will. It even handles files/
directories with spaces in the name. I use it with the following command-
line:

a -S -5 -r archive *.*

This adds the files, looks inside folders, compresses using lh5-format and
keeps the case of the file/folder names.

I've LHARC set up, with 'install application' to use the 'active window' as
the default path and NOT single-task. This means I can archive 2 places at
once.

One thing to note is, if you want to compress only one folder or file, and
it contains a space in the name, you'll need to copy it to a temporary
folder. If you don't, and you specify the name on the command-line, it gets
parsed and then doesn't match.

After re-reading it, it's is quite probable that that is the case. Must
learn to read things again, just to make sure what I think I read is what
I read.

That was the reason for the 'boot' disc response. A floppy with the driver
and no desktop.inf file should display the C: icon. Unless the driver
doesn't think the drives there. If that's the case, there's probably some
hardware fault.

1967. Faxing from Papyrus?

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: thopman@uoguelph.ca
Message-ID: <6i2pi9$7vb$1@testinfo.uoguelph.ca>
Source record: 101956

My version of Papyrus (4.25 GOLD) appears to be missing some necessary support files for faxing from within the program. The "Tele Office Driver" requires the module OFFICEDR.MOD, while the "QFax-Driver" requires QFAX_DRV.MOD. Neither of these modules appear to me on my distribution disks. Where can I get them? Do they exist? Are they part of separate packages? Or am I going to be stuck with the clumsy method of printing to IMG, and then importing into Jr Office?

I think the problem is within Popwatch. It seems that Popwatch simply takes the first e-mail address in the To: field to form the name of the "import file". This is all good as long as the field only contains one address or if yours happen to be the first in the list.

I have a feeling that Gary Priest's own ISP has some sort of "psuedo multi user mail boxes" that filters the To: field so only the valid name is left or inserted if missing. Else he should have the same problems himself.

A (sort of) solution could be to have two different modes within Popwatch: single and multi user and with a possibility to add a "postmaster" file name.

In single user mode all recieved mail goes to the postmaster file (in my case KENNETHM.TXT) and in multi user mode it works like the present Popwatch does.

A more complete solution would be to also add a user list file with all valid usernames in multi user mode. If Popwatch finds one or more valid usernames within the entire To: field, it copies the mail to each(!) receipient's import file. If no valid username found the mail goes to the postmaster import file.

>
>What am I doing wrong?

Well, *I'm guessing here*, but it might pay to check the path set in
o.inf to the password file - it's a variable called etcpasswd. If the
path is wrong then oimport won't find it. Have you set up a logname
and realname in o.inf? *I'm not clear how this works*, but AIUI you
leave those clear in real multiuser setups so they can be set by
environment variables at login. If you haven't set them in the
environment I *think* you need to set them in o.inf.

I have all those set and see all mailboxes for the users in the
password file and can use the login function in the write message
dialog to change identities (eg I login as news for usenet so I can
kill all spam sent to that address).

If you still can't get it to work, there is another trick you could
try with POPwatch: set up a NOS alias file. This sits in your NOS
directory and is called (surprise, surprise) ALIAS (no extender in
the file name).

It's structured like this:

default deliver
postmaster john
webmaster john
orphanage john

ie the first line says "default deliver" and the rest of the lines consist of the username in the message and the username for the post box you want the messages to go into. So if anyone sends mail to webmaster@ my site it gets put in john.txt by POPwatch. Likewise postmaster@ and orphanage@ both end up in john.txt. Then you could use sorting into mail folds by Okami (see Hallvard's post: I haven't got round to trying this out) to keep list messages separate.

Your alias file would be something like:

default deliver
tesl-l rosco

Now, this might not work: it depends on your setup and Gary Priest put support for this in POPwatch because us Demonites have specific needs in this area: for instance Demon's standard setup diverts messages to postmaster to the main user. Everyone who used the NOS startup package or Oasis 1 had this in their setup so POPWatch reads it for compatibility with NOS.

Demon's POP3 implementation has extensions (which they have offered up for standards approval, I believe) which POPwatch uses to sort incoming mail. Without those it uses the To: field which may be the cause of your problems with the list messages being scattered across different files. From the POPwatch docs:

>Demon users will find the email is allocated to the correct user.
>NON Demon users may not be so lucky because POPwatch has to rely on
>the 'To' address in the header field (which could be anything).
>In this case, it may be necessary to set up the relevant user in
>Oasis1, before being able to view the email.

One avenue worth investigating is whether you can use wildcards in the alias file. *I don't know if this would work* and have no idea of the implications of trying a line like

* rosco

in it, but someone with more knowledge might be able to say. If it were to work I'd expect it to put all incoming messages into rosco.txt. If you decide to experiment, *make backups of everything before you start* in case serious nasties ensue. I'd make sure POPwatch is set to leave mail on the server while testing too.

No problem there, but how would you USE the hex code? I'm guessing that
"echo <hex code>" would simply echo the code itself.

m>
m> eg: rename .new file.old

Ah, okay.

m> Try 'echo 'ALT 07' ' where ALT 07 you need to press ALT and 07.

I tried that from the command line. If I use the numeric keypad all it does is print the characters "07". If I use the alphanumeric keyboard, it simply rings the bell for all numeric characters (and maybe alpha characters), because it's an illegal keypress (with Alt held down).

It really wouldn't help me anyway, because I want to add a line to my batch files that rings the bell. (It didn't work from QED, either.)

Thanks.

Enter "Help" on the command line and it gives a list of commands. You can enter "Help Rename" and it's more specific, but since it's not in English, I don't understand it.

free and good are possible in atari. But unfortunately not for a
fileselector supporting long filename.

The thing is< if you are serious enough about your computer
environment to use MiNT, you probably already got Naes, which is
commercial, which comes with a fileselector.
OR you are playing around, and don't feel like spending any money on
atari software.

So choices are so far, Naes fileselector, freedom. Any other one?

here is my guess:
1) d:\nos\spool\mail, the : is seen as a passwd separator, and NOT
part of the PATH.
so something like "d:\nos\spool\mail" would do the trick.
OR (from unix), use /d/nos/spool/mail
Understand the prob here?
2) might as well put the full path for the shell sh at the end.
I don't think the PATH is correctly defined at the passwd login.

>My passwd file now looks like this:

Nigel does have a point Danny! It is a stupid waste
of bandwidth which wastes the money of each and every one
of us every time we download from this newsgroup.

What will happen if you don't stop is that many people will
get fed up and will add your Email address to their Kill File.
That way they will NEVER see ANYTHING you post in the future.

Consequently you will be advertising to an ever decreasing
audience. Now that is kind of COUNTERPRODUCTIVE, is it not???

Getting up the noses of the people you are trying to sell
to is not very sensible! Nigel may not have couched his
complaint in the most diplomatic of terms but the content
was none the less valid.

I suggest that you think about it before posting again.

1983. Re: Problems With GEM

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: Katherine L Ellis <kellis@primenet.com>
Message-ID: <Pine.BSI.3.96.980427195905.6428A-100000@usr02.primenet.com>
Source record: 101972

hi, well it is getting bloody here ;)
Few thoughts reading this whole thread.
1) several million ST sold, when only MUCH less hades/tt/falcon were. What I can see is, you can count 75% of these ST are in the closet, attic, whatever/wherever. So you make software for ACTIVE machines, machine that people use everyday. I have yet to find here any ST user. Sure a lot of people DO HAVE an ST, but heh in the closet, while the pc is used. (or falcon, TT in other case)

2) I agree that TOS 1.0 GEM really sucks, especially on a color monitor. Tonny, no wonder you have a pc now.
3) It's YOUR program, so you basically do whatever you want to do, ESPECIALLY when you want to do it freeware.
However, don't cry or be upset if you get LOW feedback from your programs, (coz you'll know where it comes from).
9 emails feedback from a game you did earlier, I remember that one. YOu were upset that people didn't care much.
4) in a way, you are still thinking 1985 atari. You don't want to make an effort for the atari users, No wide support (because of your GEM hating and lack of knowledge), On the other hand, you make free tools for them, and seems like you are active and do care about atari.
Question: Why if GEM sucks, are you still with atari? Why have you ever been with atari? Other system might have been better for you, what do you think about coding for W95 only or OS/2 or Macos, are they nicer? better looking? You think you could cope these OS? when you can't program for GEM (as simple it is)(I say "can't" in the way that it is either personal knowledge of a GUI, or the tools you are using not allowing an easy control of GEM).
I really can't understand why someone (game maker here) stick with atari. I really can't. An ST, no harddrive, no g.card, low ram, is not that all exiting. And I (once again) understand why you got a pc. (all flashy).
You say you can't have a nice GEM, or don't have a mono screen etc to test. Well for your information, there ARE st emulators for PC, that will even emulate the kind of resolution that an HADES, Falcon, TT can do. Why not using that to code your games/tools? I don't follow you here.
What the people (emmanuel curris and other) complain about is that a program coded in 1998, really with all the knowledge we have, with all the tools, the new hardware etc , Really shouldn't limit a program to run on ST med only. That's against every concept of programing, even atari corp made it clear that it should be avoided, that GEM/AES should be used instead of direct calls to the screen. Backward compatibility is good, but upward is needed also, especially when it

is EASILY doable. (because it is here in this case).
Games NOT using the AES/VDI, I 100% understand, speed limitation, playability are main factor in games. Hades or TT users know from the start that their machine is NOT for playing games, so that's not a big deal. But TOOL!, html related! They might be upset a little, I understand them.
Once again, I say it: It's YOUR program, FREEWARE moreover, so you do what the heck you want to do. However, don't expect the impossible. (like enormeous feedback from atari community, and IF you DO!, please let me know, because I will then revise my 1) point made earlier)

Thanks anyway for coding, and enjoying it doing it :)

1990. Atari STBook laptop brouchure

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: marknewtonjohn@webtv.net
Message-ID: <6i3n8racr1@newsd-199.bryant.webtv.net>
Source record: 101979

Here's some information from the STBook brouchure I managed to snag from a dealer...

ATARI STBOOK☐, POWERFUL, PORTABLE, EXPANDABLE. Here is a portable 68000-based system with over 2,000 business and creative software titles. So you can do everything from publishing and business applications to music and graphic arts.
POWER TO SPARE. There's no confusing STBOOK with portables of less power and potential. This state-of-the-art portable is a high porformance system incorporating Atari's proprietary chip set, which enables battery power to last an incredibly long time. So now you will actually be able to finish that new budget, or that new music score, before the batteries have gone dead on you.
But when STBOOK's batteries do start to run low, an indicator light will let you know, by changing from green to amber. You can take advantage of another intelligent Atari feature. It's called "suspend and resume". Just turn your STBOOK off in the middle of your application and you won't lose anything while you replace the batteries. "Suspend and resume" enables you to maintain data in memory for months.
Of course, you could always recharge the battery - in less than two hours.
ERGONOMICS. You will like the way this machine feels and works. For example, it has an extremely easy-to-read scree,. even in very low light levels. And speaking of light, STBOOK weighs in at under 2kg (just over 4 lbs). It's small, too. Even with its full-size, very firendly keyboard, STBOOK is about the size of an 8½ x 11" sheet of paper and less than 1½" thick.
You'll especially like our new VectorPad☐☐. This proprietary pointing device will revolutionalize the way you use a computer. Touch sensitive, with no moving parts, VectorPad is fast and accurate, delivering full mouse capability without requiring the extra space.

Of course, STBOOK is delivered with the features you've come to expect from Atari. TOS☐ operating system. MIDI In and Out as standard. Standard file transfer and organizer software. Built-in hard disk drive - 40/80/120 Mbytes. Up to 4 Mbyttes RAM. And much more.
ROOM TO GROW. STBOOK is equipped for expandability: An optional fax modem or MIDI expander will help assure that your computing power can keep up with your creative power. ANd we're developing other expansion devices. You can interface your STBOOK to direct-to-disk audio recording systems, such as a Digital Master☐. Of course, you can also connect STBOOK with any Atari desktop or IBM PC compatible. So there's no reason not to take STBOOK with you everywhere you work, or play.

Visit your favorite Atari retailer to pick one up today.

(end of brouchure)

This was typed in verbatim, with the capitalization and the □ marks for trademarked items.

A photo inside the brouchure shows an open STBOOK on the passenger seat of a Porsche 911, with the keys next to it. The screen has four open windows on top of the desktop- it has programs on the desktop, so it isn't the old TOS 1.2. The windows are; Calender/Appointment Book, ProCalc□, Control Panel (General settings, Power management, FSM fonts, Modem settings), C:/*.* window showing 542456 bytes used in 30 folders.

1991. Atari STBOOK brouchure specifications

From the Atari STBOOK brouchure:

FEATURES
☐ 8½" x 11.4" footprint, 1.4" thick
☐ Weight 4.2 lbs
☐ Up to 10 hours battery life
☐ Atari TOS☐ graphics operating system in ROM
☐ File transfer and organizer software
☐ Built-in VectorPad☐ pressure sensitive pointing device
☐ Optional internal fax-modem
☐ Internal 2.5" FDD

SPECIFICATIONS

CPU
Motorola☐ 68000 running at 8 Mhz

RAM
1 Mbyte or 4 Mbyte of low power psuedo-static RAM

ROM
512 Kbytes internal. Includes TOS, file transfer and hard disk utilities

Graphics coprocessor
8 MHz, 16-bit BLiTTER☐ coprocessor

Keyboard
84 keys. Full-size Atari keyboard can be connected.

LCD
640x400 reflective Super-Twist Nematic (STN)

Sound
Programmable sound generator with 3 voices.

Expansion
120-pin full-function expansion connector, allows full access to the
main CPU bus.

I/O
MIDI in
MIDI out
RS232
Parallel port
Floppy disk drive/DMA port (connects to external FDD, CD-ROM, laser
printer, hard disk drives, etc.)

Batteries
7 Alkaline 'AA' battery pack provided
Optional rechargeable NiCad battery pack, with AC adaptor.

AC adaptor
- delta V algorithm extends battery life. (optional) Recharges in less than 2 hours, while computer is running.

Pointing device
Atari pressure-sensitive VectorPad□, using built-in Force Sensing Resistor technology.
External electro-mechanical mouse can be connected.

Hard disk
19 ms average access time. 40/80/120 Mbytes capacity.

Mechanical
Footprint 8.5" (215mm) x 1.4" (37mm) Weight 4.2 lbs (1.9 kg) with NiCad batteries.

Software
TOS□ operating system entirely in ROM, with graphical user interface.
Fast File-transfer software (cable supplied), between STBOOK and any other Atari TOS-based computers.
Diary/Alarm/Scheduler/Calculator organizer software.

Optional Peripherals Available Soon
Internal fax-modem. 2400-baud data, 9600-baud fax.
3.5" small size, battery powered floppy disk drive
MIDI/SMPTE adaptor

l> now...

And with what Modem is this? You should be able to get 38k4 connects with a
14k4 modem. Is that what you've asked for in your DIAL.SCR?

Hang on a minute... I think I've sussed this now...

DIAL.SCR for use with STiK asks for the BAUD_RATE

====DIAL.SCR for STiK====
BAUD_RATE = 38400
..[cut]
========END==============

Where's the equivalent in STinG's DIAL.SCR? Is the SERIAL.CPX supposed to
handle it - because it doesn't...

l> I've got the new CAB.OVL from Dan's page as well and now CAB runs
l> better... those time-out's have gone here too...!

I haven't had a chance to grab it yet...

If you want to go beyound drive P: with MagiC or Big-DOS HDDRIVER
supports this. Without MagiC or Big-DOS drives beyond P: are simply not
available, i. e. TOS doesn't see them.

If you have a SCSI ZIP you can simply connect to your ST with a SCSI
hostadapter like the LINK96/97. For transferring data between the ST and
PC you should have a look at HDDRIVER:

http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html

: Does any body know where I can get netscape or asome sort of web browser for
: the ST

The sources of Netscape is freely available from mozilla.org. They have been partially potrted over to the Ot libqary under the Name Qtscape. Qtscape is freely available from troll.no. There is also the source (AFAIK) of the non comercial version of QT available. If you have enough RAM , energy and time you can try to port it. It takes 64M Ram and 256M Swap on a Linux Machine to compile Netscape. These are minimum figures.

I think it is easier to use an Atari Browser like CAB...

Christof

I think you just spotted the problem. I'm almost 100% sure that little Tony
is going to write this in STOS, so it's not that easy for him to support
any res or GEM or VDI or make it work on 99% of all TOS boxes.

Anyway, that library GEM/X sounds interresting. So now it would just be to compile
Netscape as it is and it will work first try. :-)

Wheee.. there are plenty of programs which could be compiled with such
library.... :-)))

2008. Atari mouse port 3rd button query

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <OZAXC6K@tos.pl.net>
Source record: 102158
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st,comp.sys.atari.programmer

I noticed after looking at the Atari mouse port pinout in my TT030 user's manual that on pin 5 there is room for a third (middle) mouse button.

While I don't know of any software that makes use of the third button, I wonder if the facility is there for a third button on pin 5, or is pin 5 simply not connected or ignored by the keyboard? If pin 5 is not ignored by the keyboard, does TOS support the third button? Is there any GEM software that uses the middle mouse button?

I ask as I am working on an adaptor to allow a serial mouse to be connected to the Atari ST mouse port. I would like to make the third button do something useful, but if pin 5 is disconnected or ignored it would not be sensible for me to use it. The other option is to make the third button act as a double click or as a simultanious left and right click, but I would not want to exclude users of perhaps X Windows or something that does make use of the third button on pin 5.

Another question - I observe that when the mouse is moved too quickly on my TT the mouse cursor moves in the reverse direction for a moment. I have noticed the same behaviour on other Atari ST series machines. (The effect is more noticable with third-party mice as they are faster than the Atari mouse.) I guessed that this must be caused by a movement count in the keyboard processor overflowing when the mouse is moved too quickly, and causing the sign to change. Is this really the reason? Is there anything I can do about that?

And finally, would there be any interest in such an adaptor? There is a serial mouse driver available allowing a serial mouse to be used on a serial port, but then you have the mouse port doing nothing while on the ST, with only one serial port, you have no serial ports left. Wouldn't it be better to be able to connect a serial mouse to the mouse port, leaving your serial port free for a modem? What do you think?

I look forward to your comments.

Effectivly, if so, that makes thing more difficult. As I don't want
to start another war between langages, I'll make no comment...

>>Anyway, that library GEM/X sounds interresting. So now it would just be to compile
>>Netscape as it is and it will work first try. :-)
>>
>>Wheee.. there are plenty of programs which could be compiled with such
>>library.... :-)))

Errr... No.
The first aim (which may begin to be reached in one month) is to make
a lib of functions so that somebody that use them can compile his program on
GEM or X-Window without change. That's achieved partly by allow loading an
usage of RSC files on X.
The second aim (no date, as I don't need it urgently :-) is to
provide, based on the X-version of this lib., a way to recompile gem-program
on X-window.

The aim is not to recompile X-window programms on GEM... Which is
difficult (not impossible I think, but...) to do because:
- X-Window is much more powerful than GEM (but much more low level also...)
- many programms (like netscape) use "toolkits" libs that have to be also
emulated and so on. Especially, for programms using motif...

Hi,
.cpx files are no good for this. The possible problem is due Mighty Sonic's
FastRam. It seems like it, or something else is causing the problems, when
I login to MiNT console. Mint reports the memory thing and sets the terminal
to vt52. After that the cursor color changes to white (as the background is).
I've got some similiar problems under SingleTos, if the Blitter is enabled
when FastRam is active.

Regards.

Miika

Well on my AB040 it's about as fast compressing as uncompressing with STZip. :-)

Dennis,

I tried for two weeks to edit the STing config file, and could get
no-where. I finally deleted the whole thing and re-extracted all the
files to C:\. In the config file, I used no logon script, I just
plugged in the numbers, names and passwords that Bellsouth gave me. I
pressed connect and I was online. You may not need the logon script.
delete all the info from the logon script. I think in the dialer
config it's called the dial script. All that response, wait etc stuff
may not be necessary.

When I load my dial.scr file into everest it looks like chinese
writing. I know this is supposed to be a plain ascii file, but mine
works good.

The big problem that I also had and got the "could not resolve host"
was that in the dialer's config, under 'ADDRESSING' I forgot to put in

the 'fully qualified domain name. In my case it was bellsouth.net.
Your problem is probably a lot easier to solve than you think. start
from the beggining and put in only the basic stuff. Set your baud
rate, etc. type in the DNS's, your name, and password. Start adding
things from their. I spent two weeks editing a dial script(logon
script) that I didn't need. If all else fails, use flash to dial up
the ISP, and if your lucky, you will be able to see what the prompts
are if you even need them.

Hope this helps, and good luck!!

2014. New TOS architecture

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: K�re Hampf <k_hampf@yahoo.com>
Message-ID: <35445f4b.0@d2o29.telia.com>
Source record: 102164

Dear Sirs!

The idea of making a TOS clone seems like a wonderful thing, and what needs to be done is to develop a new architecture that is compatible with the old TOS computers available.
Running on a Motorola 68060 is currently the furthest anyone has gotten the TOS architecture, and with the Falcon's TOS and all its compatible replacements like MagiC, MiNT and n.AES it is useful and fast ... but not enough powerful to compete with other platforms on the market. What would need to be done is to get a totally new architecture not based on and limited by the Motorola 68K processor. My and others suggestion is to take a good look at other processors as the PowerPC G-chips and the Exponential X-chip and if possible, the extremely powerful Digital Alpha chip.
Furthermore there's a need of using the technology of today also in the rest of the architecture, which I beleive already has been done; EDO-memory and PCI-cards. These are available on the market and would increase any platforms popularity.
In my beleif a killer-machine like a PowerPC Atari TOS-clone would run MiNT with a nice frontend at speeds competitive with most other platforms on the market, and MiNT has the advantage of being Unix-compatible aswell as TOS-compatible. To really get into the market with an Atari system I think it's needed to aim at being compatible, Unix, Mac and PC compability could be something making the Atari architecture atractive.

I would very much appreciate receiving response to this letter, I have posted it in comp.sys.atari.st as well as mailed it to Wizztronics. If there is intrest in this matter I will do what I can to get everyone going, and I would like to get others with me. Alone I can only make wishes and ask questions. Together we could accomplish anything.

Best Regards,
K. Hampf

Bonjour,

Dans l'article <354bca23.49154999@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :

??> So I reread.
??> You want to allow the user to insert an image in all selected files,
??>for instance, no ? What about let the user see the image before inserting ?
??
??No that is most certainly not going to be a feature or the object of
??the program,

Ok. That's your choice. I personnaly prefer to see what I do - and
buttons everywhere is not the only thing for that - but that's a programmer's
choice that can be respected, this one.

??>Two ways for that :
??
??No way for that!
??
??If you want this program then you already own a web site or a
??selection of html pages, you already make them,
??
??The idea is that you work in your normal enviroment, you make the
??changes to one page just the same way as you normally would,,,Then
??when you are happy you run my program and make these changes to all
??the other pages....

And if my normal environment is not 640?200?4, no way ? As you say, if
this way round, the program is just editing ASCII files without even trying to
understand them. Isn't it silly to make it rely on a special resolution for
that ?

??I realy don't want to get into web editing...just a tool...
??
??> - allow multitasking -> he can use another programm to choose visually the
??>image he wants to add
??
??But then we are getting into web editing and thats not what this is
??about..OK your idea may be valid.. but so is adding a WYSIWYG web
??editor or why not add a function to upload... we have to draw the line
??somewhere, I am making a web management tool, not an editor...you see
??:)
??> In other words : it's interesting to allow editing of many HTML files
??

��Not an editor..

You modify them, no ?
So let's say you simply load HTML files, add HTML code in them and
save them - is that wrong ?
Your buttons are just here to help selecting which code is made,
that's it ?
For instance, I want to make all my backgrounds blue. So you say I
test it in normal environment, it's ok then i change to med-res (if I can...),
I enter the parameters in your program and it makes the adaptation of other
files. Am I wrong ?

Ok, for doing only that it's not necessary to have a special screen
resolution and so on. Is that a reason to forbid all resolutions you don't
have ?

��>at one time, but it's more with at least a preview of what it's done - or a
��>way to test easily the result.
��
��But you do that under your normal working enviroment ?

Of course I do ! Why not ?

��> The second way can be easily achieved in a multitasking environnement.
��
��So the penny hasnt dropped then.. I CAN NOT SUPPORT MULTITASKING..
��there I shouted it if that helps? :)

I didn't say ��support multitasking��, I give you examples to show you
why it may be interesting.

��> As soon as some graphical paramaters such as images (for background,
��>for instance) are involved, I personnally think that a good interface must
��>allow the user to preview these graphical parameters - not only their
��
��NO!..most definatly no.. you really have got the wrong end of the
��stick here...You are talking about this tool being used for editing or
��viewing html.. thats not what it is for...

Not viewing, previewing.
Anyway, that means we don't have the same idea of interface - which
will make the talk difficult...

��> I'm a atari user, I own a powerful atari clone. I maintain a huge
��>collection of HTML files, for any reason.
��> I'm interested by your programm. Recent, so I'm confident : it should
��>work. I test -> crash. Not sympathical at all.
��
��Now you are starting to get on my wick!..my programs do not crash and
��you insult me..

Didn't you say ��it won't work on hades, just because it can't handle
a so poor 640�200�4 res�� ? Isn't that a crash�?

Of course, that's won't make appear bombs or so - you said, I believe
you, in fact I don't mind at all - but it won't work just because it's too
powerful. For me, it is definitly a crash.

��My program will check and display a message.. thats if the user is so
��stupid he did not read all the advertisement and read mes that say up
��to falcon and tt....my programs do not crash...they check for os and
��act accordingly... you insult me.. why do you write in a public
��newsgroup that my programs will crash :((((
�
��> So, more generally : many programms won't run on hades just because
��>programmers don't wan't to make the _little_ effort of using standard
��
��Ho dear..little effort ?.... get real :(

��>coding. I don't think it helps for atari's computers future... And that also
��>explains why I'm so angry when I heard people insist to make not compatible
��>programms. There's NO good reason to do that, except taking advantage of a
��
��Ther is no good rason you know of... I already explained that i am
��limited and cannot... why do you insist to argue this point... you
��bought a hades and you knew not many people have one.. and even less
��people are making software for them..

You said I can't, I can't, no choice, no choice�� but you never gave
any reason, except ��I hate GEM�� (not good reason) and ��I don't know how to
do , which I already answer ��One (I) can help you .
What are your reasons ?

��You are blaming me who has a ste, with med res and a colour monitor..
��you blame me that it does not work on hades..... have a think ?

No, I blame you that you don't even want to try to let it work.
I mean, you decided to choose med-res, you may perfectly ignore that
it doesn't exist on newest computers. I answered ��please no limitation to
this resolution, or it won't work��, so now you know it won't work as is.
But all your answer is ��I don't care, I don't even want to make
anything againts that��, whatever suggestion we make to allow it running.

��> As pointed out in other messages, it's nearly certain that a big part
��>of people using atari for _creating_ web pages or HTML docs are using enhanced
��>atari computers. Especially multitasking OS like magic or N.AES. So make your
��
��eh?.. no..you suggested that..

No i didn't - it was not in my messages but in other answers.

 I proved to you that this was not the
��case...

You didn't proved anything. You said I don't believe the AC sondage,
I'm sure many basic 520/1040 owner are now connected��. That's not a proof.

In most signature I read, I notice a better computer than that...

> how can you now say it is... it isnt.. its simple ascci so you
>>dont need big powerfull computers... this is just opinion.....

That's not a reason to forbid the program running on powerful
computers! I never asked to forget owners of 520/1040, I just ask to think of
owners of hades - and other peoples asked for magic & n.aes

>>>resolution than 640>200>4 may be better - but the main fact is that>: why not
>>>allow your programm to run on _all_ TOS computers>?
>>
>>why do you not understand this sentance "it is not choice", there are
>>only four words there, surely you can understand it ?

```
Because you never explained why it's not a choice.
```

>>> AN INTERFACE THAT CAUSES A PROGRAMM TO CRASH ON A SPECIFIC COMPUTER OR A
>>
>>Listen.. you are insulting me.. I have made 65+ programs on the
>>atari.. THEY DO NOT CRASH!.....If they find an OS thats not
>>compatable then they give a message... stop saying it will crash :(

```
Change into DON'T WORK if you prefer, it's the same thing for me.
```

>>>SPECIFIC OS (especially on the one existing when it was created) CAN'T BE A
>>
>>> What other hardware reason do you see for a programm not to run on
>>>Hades ? Hardware reasons are the only good reasons - I mean, really hardware
>>

```
Ok, no ttp. And what about the suggestions in the other messages ?
```

>> Other knowledge reason : ask here or on comp.sys.atari.programmers (I
>>think it's the good name ?) and one will help you.
>>
>>hehehe...you mean the knitting class.... I am not allowed to talk
>>about programming in c.s.a.programmer or everyone starts crying...
>>they all talk a lot... no programs.. just talk ...
>>
>> You hate GEM... Sorry, this reason is as stupid for me as you find
>>stupid mines. And the same arguments as above apply.
>>
>>why?

```
Because if you hate GEM, you can delegate it to someone else, exactly
as if you just don't know how to use it.
```

>>>>have to allow something else than 640200?4... Even ST-high would work - but
>>>>not very comfortable...
>>
>>But I would not be able to see it ?

I didn't say use only 640400?2??, I said ??at least allow your
programm to adapt to high res, in addition to med-res??.

>>>>Less than comfortably on my STe and colour monitor...
>>>
>> Hey, is that so difficult to test resolution, so that
>> -> medium rez ok
>> -> high rez -> all vertical size * 2, no more color use ?
>> That's the only thing to do to make it work on ST-high, no ? Even if,
>>in that case, that won't always be very nice, but at least it then
>>works. Better than nothing, no ?
>>
>>
>>sorry but no....dont you like nice looking things?

```
I prefer an ugly programm that works than a nice programm that doesn't.
```

>> ??Try to add a little thought, brains and reasoning to your next post :)
>>>
>> Are you more satisfied with this one ? I'm afraid you won't...
>>
>>
>>You still havent grasped the concept of the program.... you still seem
>>to know a lot more about programming the hades than I do... could the
>>fact that you own one have any bearing on that...

```
I don't know anything about _specific_ hades programming.
But I know that nice-written programs run on hades without
problem. You can write nice programm even on a basic 520, no ?
```

hi,
Just save the desktop setup you like colours icons etc and save
desktop rename it then change the desktop setting to the next setup
and save and alter the name.

To switch setup select preferences and load the info file you wish and
the desk top will adjust to the settings.

Hi Ian!

Yes, of course I can mail it to you, but first I'll have to do a few
translations and documentation so that you can handle it (a little install
procedure is needed).

Without any further developing it will be ready in a few days.
(If there is nobody else interested in such a program I think I'm not
going to make a completely new version.)

Check out the system call pathconf ().

Dpathconf returns information about various limits or capabilities of
the file system containing the file named name. The variable mode
controls which limit
or capability is being queried, as follows:

mode Value Returned
-1 return max. legal value for n in Dpathconf(n)
0 return internal limit on the number of open files
1 return max. number of links to a file
2 return max. length of a full path name
3 return max. length of an individual file name
4 return number of bytes that can be written atomically
5 return information about file name truncation

You need a 20-way edge connector (part no FS81C) as featured on page
331 of the Maplin catalogue. £1.05 each. You will probably need some
40-way ribbon cable, too, unless you have bits of old SCSI cable
around which you can cut down.

What is redirect.prg? But never mind -- I finally have both monitors working! Ends up the problem was not enabling NVDI's screen drivers (nvdidrvx.sys). Normally these are disabled because the NOVA driver is used instead. This and the combination of re-ordering one auto folder program did the trick for me.

I'm sorry, but this is 1998, not 1985 and the times of Degas Elite, and
you post some specs like you did. What do you expect?

Hi

Does anyone here know of a good and free fileselector which can handle
long filenames under MiNT? Thanks for any tip.

Greetings

Daniel

2028. Re: Atari mouse port 3rd button query

Newsgroup: comp.sys.atari.st

Bonjour,

Dans l'article <3566833d.13867428@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :

??>IMHO Atari ST (at least) does not have hardware provisions for 3-button mouse.
??>This "extra" pin is simply empty.
??
??I believe the ATARI has 4 Mouse settings..well mine does...
??
??1=left mouse button
??2=right mouse button
??3=both mouse buttons
??4=nothing (deep man!)
??
??Detecting third mouse button simply replaces option 3...I think!!

Not with standard functions... It seems that GEM/VDI functions
theoretically allow one button per bit of the returned word for the
mouse-buttons state.
That is, if 3 buttons :
%000 -> no button pressed
%001 -> button 1 pressed
%010 -> button 2 pressed (makes 2)
%011 -> button 1 & 2 pressed (makes 3)
%100 -> button 3 pressed (makes 4)
and so on...

The matter is that it seems that mouse-controller doesn't seem to be
made for using these capacities...
I had an optical 3-buttons mouse. As far as I could remember, pressing
the middle button had no effect on 520 but was recognized on Mega STE. But the
returned word was incorrectly set.
It was a long time ago, I can't give more details...

I wouldn't worry too much. The printer port is a bit weak, but it caused
problems only with older printers.
On the other hand you can have problems by connecting the plug,
especially on the printer side. This is not related to the computer but
to supply voltages and ground shields on the plug.
Additionally it is bad habit to connect anything while power is on but
the switch-box was made for avoiding that.
In your case I see neither of the two problems.
Greetings
Wolfgang

My passwd file now looks like this:

rosco::0:0:Ross MacIver:d:\nos\spool\mail:sh
tesl-l::0:0:Ross MacIver:d:\nos\spool\mail:sh

I still have to import mail seperately for rosco and for tesl-l. For
this current session, the last import I did was for tesl-l, and when I
tried to change the login to rosco, I got an alert box saying "User
rosco is not found".

What am I doing wrong?

Well, let me belabor the point a bit further ...

1/ Does your program use it's own custom
operating kernel?

2/ Does your program access the machine at the
BIOS/XBIOS level?

3/ Does your program access the machine at the
GEMDOS/VDI level?

Assuming an answer of "yes" to one or more of the
above, what changes would you make to the hardware
and/or available system routines to make your
program simpler to develop and more efficient in
operation?

I never managed to run COPS reliably on any of my systems. It always
ended up either conflicting with another program or crashing all by
itself with some CPX.

I've found absolutely no problem whatsoever with the original
Xcontrol.acc, which is always loaded on my machines. The only problem
with Xcontrol is that you cannot open several CPX's simultaneously,
which is no big deal for me.

Cheers,
Nick

HT>
HT> mv example.txt newdir/

Right.

You can try 'help rename':

e:\gemini\user> help rename
rename [-icv] ext dateien - dateien mit Endung ext versehen
e:\gemini\user>
Rename can only change the extension of the file.

eg: rename .new file.old

-v for verbose
-i for interactive
-c for ?????

>> Also, is there any way to get it to produce the system bell? Maybe some
>> type of Echo command?
HT>
HT> Hmmm... not sure, but for starters "bell" is <CTRL-g>, so perhaps

>is: is it safe to toggle from one computer to the other using the switchbox
>without powering off the Atari. People seem to do this all the time with PC's,
>but I'm worried about the ST.

The printer ports on PC's are buffered, something that was totally unknown for Atari's developers...
No Atari computers have buffered printer ports (only the joystick and midi ports are safe to exchange "hot"), which means you always have a risk of damaging your computer when you connect or disconnect something when it's running. However, this risk is much smaller when you use a switchbox, since you switch all the connections at the same time and you have much less risk for static electricity, so in your case it would be rather safe - but you can't be absolutely sure...
If you do have a strike of bad luck, the most common problem is the soundchip (YM2149), which contains almost all the printer signals - just exchange it and it'll probably work again. If that doesn't help, exchange the 68901 chip, which contains the last signal for the printer and should do the trick.

>like is a plug to plug into the cartridge port and having a cable
>so that I can use the port in a more convenient place.

If you get hold of the connectors (they should be available at any
electronic components shop), don't make the cable too long - it simply won't
work. I believe you have a limit of 20 or 25 centimeters before you loose
the signals (maybe less if you don't make some sort of buffering).

Bonsoir,

Dans l'article <354ac7ff.48607543@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :

??>??Not it means I am limited by my working enviroment,
??>
??> ??? It's perfectly possible to make programmes that runs on
??>magic/milan/hades/whatever atari you want by using a simple 520 ST, no HD,
??>colour screen. You just have to follow the standard programmation rules. Of
??
??No it means you have to use GEM....

Not necessarly, if you really don't want do allow multitasking. The
main thing you have to do is?:
- check the current correct screen resolution with VDI v_opnvwk() and the
infos in work_out it returns
- adapt your button's size and so on with that informations.

I suppose you're not GEM-allergic enough to use some personnal
functions to test mous buttons and so on, but the classical ones?? VDI
eventually, doesn't matter.

??> I perfectly read. Did YOU read the end of my post ? Do you hate GEM so
??>much that you don't event want to allow someone else to make a GEM interface
??
??How are you going to make a GEM interface for my none GEM program ?,
??are you suggesting I write it as a command line and let someone else
??make the interface... what fun or enjoyment would I get from that...?

No, I suggest you write clean enough so that one can easily make the
disctinction between the programm itself and the interface part. So that you
can make you're own interface, and someone interested can replace it by a GEM
interface, with you agreement, rewriting only that and not having to check and
understand all other parts.

??No it is better if I make it and advertise it for ATARI Computers,

No it isn't. I think we'll never agree on that point.

??ST's megas, falcons and TT's... and thats exatly what I have done..

??>for users that won't be able to use the programm without that, in addition to
??>your own interface ? Are you so attached to the medium rez that you don't even
??>want to try to make your own interface adapting to other resolutions ?
??
??Funny that because everyone else says 2 colours for higher rez... I am

��using 4

I don't see the meaning of this remark ? Do you mean the only
resolution suited to your own interface is 4 colours resolution�? It's a
vicious circle...
Don't you agree that a 640*400*16 could be suited for you interface ?
Isn't that another resolution ? Higher ? That one can found on falcon ?
Do you mean that you don't event want to think to a 640�400 2-colours
version of your interface, which would allow the programm to run on more
computers [think of atari owners with mono monitor, if you have something
againts non-atari tos computers], just because it has only 2 colours�?
So what do you mean exactly by this remark ?

According to Steve (the Pres) at Wizztronics, they are negotiating
with Hasbro to purchase all TOS, unless I misunderstood him.
We'll probably only know once the lawsuites start:).

The story continues:).

Mentioning Calamus in more than 256 colors was a 'shot' at Jo about him insulting my 'spaghetti' system ;-).

Too be honest, I prefer to use Calamus in monochrome mode, since my printer is black and white anyway. For working on greyscale scans destined for the same printer, I use Cranach Studio in monochrome, too. A resolution drawback? Heck, no... Cranach works so that any image-processing done is shown to the screen as the printer will see it (i.e. it's 'screened'). There's an optional Calamus paint module that works the same way. In Cranach, once the image-processing is done, this graphic halftone is scaled, converted to a 1-bit image and then imported into Calamus. Funny how the lowest resolution can sometimes yield the best results.

So it does work. Louis says the same for the Matrix card. The NOVA manual says it can be done (a second monitor), so perhaps I'm doing something wrong when it comes to how certain drivers are being used (I've had XBoot try all sorts of configurations). What gets me is that the MultiSync's panel lights show it's getting a proper video signal when the TTM195 is connected to the TT's monitor port. Somehow I'm close.

Years ago I bicycled through Europe (including Belgium). Had I known you
and Martin then I would have stopped by for a visit <g>.

I've just gone through 350K of GEnie's Crazy Dots message archives, using
the search string Calamus. The only messages worth mentioning are these:

Category 17, Topic 12
Message 34 Fri May 14, 1993
POTECHIN [Nathan] at 13:37 EDT

Just for the record and to avoid any possible confusion,
Calamus SL will run in 1,4 8 and 32/24 bit. It will not work
in 16bit. This is the fault of Calamus SL, not the Crazy
Dots card. Please do not use 16 bit mode when running
Calamus SL. Thank you.

Nathan @ DMC

Category 17, Topic 12
Message 67 Thu Jul 22, 1993
J.ALLEN27 [FAST TECH] at 10:39 EDT

The upgrade from a CD8/15 to the CD II requires a change of
the color palette chip. THis is a surfacemounted chip that
must be removed and a more advanced one soldered in its
place. This is accompanied by a new revision of the driver
software that has 24bit support in it.

The controller chip was always able to do 24bit at 640x480,
it just needed a different color palette chip and the SW to
support it. The max. pixel clock stays the same, so the
higher res's stay the same, but a VGA 24bit res is added.
From my understanding of it. I haven't used the new driver
yet, looking forward to seeing CalamusSL in 24bit though!

The GEnie messages went up to April 1996, with no mention of a patch program or anything else worthy to note regarding Calamus and Crazy Dots.

2051. Picture in Neodesk3?

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: BACH@ATLANTIS-BBS.COM
Message-ID: <6i0ned$2i6$1@news.ncal.verio.com>
Source record: 102286

Hello All!
I have an Atari TT030 that I use Neodesk 3 on (with Geneva)
I was reading in a STart mag, that in neodesk2 you can use a
picture on your desktop (probalbly Degas or neocrome) How can I
do that in Neodesk3? I do not have any docs.

Thanx

Tim Conrardy
TT030/Mega Ste

2052. New PHPLAYER 4.3 release!

Newsgroup: comp.sys.atari.st
Date: 1998-04-27 00:00:00 UTC
From: wongck@letterbox.com
Message-ID: <6i0p9v$lit@usenet.pa.dec.com>
Source record: 102287

Hi Atarians!

PH Player 4.3 is ready for downloading at
http://probehouse.home.ml.org
http://www.geocities.com/SiliconValley/6880/phsw.html

and it is still FREEWARE !! Not shareware, cripple-ware nor nag-ware.

What's new -
* Drag&Drop Protocol for Mulitasking OS,
just drag sample files from desktop window onto the Player's GUI.
* Signed/Unsigned playback.
* Fixed some major bugs - MagiC & AV-protocol not file crash.

Compatibility -
* DMA hardware (STE/TT/Falcon)
* TOS, MultiTOS AES 4.1, MagiC

Supported sample formats -
* Microsoft Wave (WAV):
MS PCM 8/16 bit, mono/stereo
MS ADPCM 4 bit, mono/stereo
A-Law/�-Law 8 bit, mono/stereo
* IMA Wave (WAV):
IMA ADPCM 4 bit, mono/stereo
* Sun/NeXT Audio (AU):
PCM 8/16 bit, mono/stereo
�-Law 8 bit, mono/stereo
* SUN (Mac? other?) Sound (SND):
PCM 8/16 bit, mono/stereo
�-Law 8 bit, mono/stereo
* Audio Visual Research (AVR):
signed/unsigned 8/16 bit, mono/stereo
* SGI/Apple IFF (AIF):
PCM 8/16 bit, mono/stereo
* Soundblaster sound (VOC):
8 bits, mono/stereo.
* Amiga IFF (IFF):
8 bits, mono/stereo.
* RAW format:
default to unsigned 8 bit, mono.

Support standard playback speeds.

Other Features -
* Automatic detection of various famous format and playback speed.

* Just drop a sample file on it's icon to play sample
* No difficult options to configure
* Non-modal GUI ideal for multitasking systems.
* Supports Drag&Drop Protocol in multitasking system.
* Multitask aware.
* VA-protocal support - good as a viewer for other programs (eg CAB).
* Fast sample loading & preprocessing
* Change to a desktop accessory just by renaming from .PRG to .ACC
* Play sample on .ACC startup
* TT compatible.

A new pre-release of Studio Son is available !

It's again a version 1.99 beta, but it's one of the more stable version !

What's new ?

* All the Direct2Disk functions have been rewrited and the precision has
been improved !

* Reel test of the input clock : the synchronization with a numerical
input (DAT, CD, ..) is perfect now (no more "crack").

* Full compatibility with the two type of Codec found in Falcon (Cubase
can't say the same thing. I need to patch it if I want to use it without an
external clock !!)

Where can you found it.

http://www.emi.u-bordeaux.fr/~ricard/StudioSon

Remember : Studio Son V2 is FREEWARE !!

Hi Louis, on 24 Apr 98 you wrote: ...respect, brethren
l>
l> ..talking about modems, with the prices these days I'm considering
l> upgrading to a 56k modem: can you simply hook one up to a TT030 and
l> get rates corresponding to the standard or does the TT have hardware
l> limits? I'm simply not sure, hence the question.

The Modem 2 port supports 38k4, but higher than this it only supports the
non-standard rates of 76k8 and 153k6. To have access to the standard rates
you need to use Serial 2 on the VME backplate which allows you 57k6, 115k2
and even 230k4!

Make sure you know what rates the modem will support. As long as it can
manage 115k2 you should be fine.

Agreed - Popwatch is importing mail the mail into rosco.txt,
tesl-l.txt, eps.txt etc.

But surely there must be a way for Okami to deal with these different
"mailboxes". I was using Oasis 2 for a while and it would ask "Mail
for unknown user TESL-L. Import? Yes/No", so you just had to hit the
return key a few times and all the mail would be loaded in.

The paths are correct and I've tried both leaving the logname and
realname blank and filling them in. If they are blank then _no_ mail
is loaded in, because the environment variable $USER is non-existant -
I don't use them. I _could_ set up variables for Okami with Thing,
but that basically leaves me back at square one - only mail for $USER
will be loaded in.

>I have all those set and see all mailboxes for the users in the

So you have a multi-line passwd file? It's strange that this won't
work for me.

>If you still can't get it to work, there is another trick you could

>implications of trying a line like
>
>* rosco

I tried something like this in the O.INF file, although I think I was
using "*". Okami looked for user "*". As I recall, the alias file is
only for outgoing posts.

I thank you for all your suggestions. I'll experiment a bit more and
tell you the results.

The home directory and shell sections of the passwd file are not used
by Okami, but I will try your suggestion and see if works.

I did a websearch for passwd and I came across a reference like this:

rosco:tesl-l:0:0:Ross MacIver:d:\nos\spool\mail:sh

i.e. there were 2 names at the beginning. Is this a standard usage?
What is it used for?

I appreciate the work done in PH Player, MPlayer, AniPlay and GemJing, but if there's one challenge I really need to put out to Atari programmers it's the support of .RA files - Real Audio.

Is it possible on the Atari?

I note that on the PC there is no conversion utility to get an RA file into any other format whatsoever unless the sound is taken out and back in again to be sampled. The 850k RA file that I want to play conerts to a 6.7Mb WAV file when this is done, so I'd really appreciate direct support if it's possible.

Regards, Harry Sideras - UK Association of Atari User Groups

I don't think you'll find a suitable connector in any old electronics shop.
When I built my own extender, I remember looking and deciding that I _might_
manage something close, but nothing perfect (the lack of keying on the port
makes it harder to just buy an oversized edge connector, as there's always
the possibility of inserting it wrongly).

Eventually I got a couple of connectors from Best Electronics (US based -
I got mine when Brad was over for a show). I'm afraid I no longer have any
contact details - maybe someone else can help.

For the male end, I eventually soldered directly to the connectors on an
old clock cartridge.

BTW, heed the warning about the cable length wisely.

When I changed from .ZIP to .LZH I forgot to change the html to match.

Oh. That's something I hadn't thought of. Now I have to really look after
the contents. :-(So much for the easy life.

It doesn't stay resident, so there shouldn't be any conflicts. I haven't had
any since I wrote it.

> A couple of suggestions to your program:
>
> -add a small "readme" file to it

That's the one thing I hate doing. I find it so difficult to write them as
I never know what to put in them. I've tried on a couple occassions, for
different programs, and they turn out to as though they're aimed at a
complete idiot, or someone who already knows what each thing does.

Then again, now it's going to get more advertising, I'd better try a bit
harder.

> -display on the screen what it actually does when it's started -it
> doesn't actually say which step rate it's set to.

That's a quick and easy change. The re-compiled version has just finished
and I'll archive it and upload it later, probably tonight.

It is stupid. Unless, of course, the publishers of said discs are going to
re-publish them. If they were, it would hurt their sales. For some reason
I don't think that's going to happen.

> second, if you
> copy the contents of the disk then you are still copying the disk

Now that's debatable. If I copied the disc, the copy would be the same
as the original. If I zip the contents, then unpack them again, the
'copy' isn't the same. A quick comparison would show that the discs were
different, even if only because of fragments of the previous contents
still being on the disc. However, this is just a case of splitting hairs,
so I'll stop now, before I get in too deep.

> Howver if you just copy the contents that are freeware/pd then your
> defeating the point in the first place and the chances are that in
> this form they are already available for download from one of the many

In that case, a listing of the contents of each disc, and a URL to find them
solves that problem.

> Hey I am not trying to preach right and wrong or anything..Just

Not true. I have access to a PC, on the odd occassion that I need to use some hardware that I haven't got on my STE, but I use a 520 STE daily. I browse, collect news and mail, and all on an STE. Just look at my sig to see what I USE, rather than keep hidden away.

> 2) I agree that TOS 1.0 GEM really sucks, especially on a color

And that of TOS 1.6 isn't really any better. That's one reason for me getting Magic. That and the ability to m/task.

A) With WDialog loaded I can access "Edit nicknames" with no problem at all.

B) With WDialog not loaded, Newsie crashes out with an exception error unless I have another Newsie window open at the same time. It otherwise doesn't matter whether I've opened a window previously, or left a window from another app. open at the same time.

Thanks...I figured it out after I posted those messages yesterday. I actually looked up the code in my GFA manual and saw that it corresponded to the window fuller character.

Now I just need to figure out how to keep it from giving a LF. That or start it at the the top (home) each time. That's because I'm using it in GEM mode and after awhile it starts scrolling my desktop, because it echos a LF each time along with the bell. Any ideas?

That's kind of a specialized app. There are word processors that
covert to lower case (or upper case). It would be a fairly simple
matter to program something like this in GFA Basic. I could do it for
you if you like.

I'm glad to hear that thing works with the neodesk/ geneva combo so maybe
there's some hope for geneva with thing & no neodesk.
I want to run thing INSTEAD of neodesk (using geneva to multitask). This
is the combination that bombs on me. Of course thing works perfectly under
single TOS but add in geneva & 2 bombs every time...

<snipped the rest as I'm in broad agreement>

Errrm. I have an ST that is used every day and most certainly isn't in the closet. I'm using it right now... OTOH it isn't a single-floppy 1040 with a television as a monitor. It's a 4Mb STE with hard drive, mono monitor (I have a colour monitor I use in low res for the occasional play with graphics, but generally I have more respect for my eyes...), running MagiC 5/NVDI/OLGA etc (ie modern system software).

I agree with your basic point that the ACTIVE machines are most likely to be those where the users have invested money in upgrading or expanding them somehow, either by switching to higher spec machines or adding extra RAM, HDs, new OSs etc. Most will probably be using high res or better, IMHO.

BTW Tony, you can get high res monitors really cheaply second hand. I got a spare which my sister now uses for the grand sum of UKP10 (from a guy who advertised in here).

¬¬> It is a small 29kb file and has a simple text message, nothing more,
¬¬> nothing less, Just test and see if it runs and report back here yes?
¬¬
¬¬It worked in mono under SToNX (640x400) but on under STOnX in 640x480
¬¬16 colours. If you don't use the VDI I doubt very much that it will
¬¬work on a GFX card. Maybe it will work in mono on a GFX card.

It won't, I just had time to test it...

Doesn't work on Hades, 2 bombs - I bet it's mainly because of the STOS
dirty start-up code (it's definitly some STOS basic...), in that case I'll be
very curious to see how Tony will be able to make a nice message and not a big
crash on hades (do you remember on a old post).
And if he manages to, that means he also can entirely support hades
so...

Anyway, that just proves the way choosen to draw the text is not the
good one :-)... Did you used basic STOS codes or VDI instructions, available in
STOS IIRC ?

Anyway again, I'll test on my falcon too, just for fun... But not
before one or two weeks.

Bonsoir,

Dans l'article <355ade96.16909160@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ?crit :
?
??Please Choose A or B
??
??A) Continue with current propasal and make a very nice easy to use
??push button tool for web masters that will support All ATARI ST
??machines, Megas, Falcons and TT's with a hard coded 640x200x2
??resolution,
??
??B) Scrap A) And make the same tool, but with a text based interface
??that in my opinion will look like something from the spectrum days,
??but will be resolution independant, I have no idea if it will support
??gfx cards or hades because no one tested the test.tos that I uploaded
??:(The menu would be keyboard driven and the whole thing would be in
??black and white :(to accomodate high rez.....and basically look very
??sad.... but work :)

B of course... If correctly done, adding a A-type interface is
completely possible, so we have advantages for both. Supposes a variant of B
which is something like command-line, but that can be done.
But to be correct : use something else than STOS for B... Another
basic (not many differences if you don't use graphic part...), or C or another
h-level langage...
C-tutorials can be found in many libraries.

And let us time to do the test, we're not 24-hours a day before our
computers I think ! Answer to the test is somewhere else in the
thread... Doesn't work -> try something else :-)

I certainly hope it is usable with version 8 -- I've been keeping my books on
it since January 1998. (So far, so good). As for speed, it's a mite
sluggish, but not too bad (sort of like Pagestream on an ST).

Like I said, Gary has put in partial support for the NOS alias file,
largely to make migrating from NOS easier for those of us who started
out using NOS or Oasis 1. From the POPwatch CHANGES.TXT (as of version
2.00):

>.Now supports limited use of the 'alias' file when retrieving into
> NOS. It is limited to one aliasname mapping to one recipient.
> Multiple recipients are not handled. Nor is mapping when sending
> email.
> This means that if the alias contains:
> postmaster gary
> Any email addressed to 'postmaster' will in fact be retrieved into
> 'gary' mailbox.
> Oasis1.xx seems to set this as standard. If you don't know what the
> alias file is, then you probably shouldn't worry about it :)

Actually, to clarify the stuff about mapping above, you can have
multiple lines, but each is limited to "aliasname recipient", you
can't have "aliasname recipient1, recipient2" etc.

I did some more checking on the NOS alias format today. The way to get
NOS to deliver to one mailbox is to change "default deliver" to
"default username" (so the wildcard thing I suggested in that previous
message is *definately wrong*). However in the light of the above I
doubt if POPwatch would understand "default username" at present.
Might be worth experimenting if you are feeling adventurous...

Just to clarfy a confusing situation, the NOS alias file (which
affects sorting incoming mail by NOS and POPwatch) *isn't* the same
one as the Okami alias file (which is for outgoing mail distribution
lists in Okami). Two separate files in different places.

I still reckon go with C: do it as a TTP with command line
options/switches and then put your med rez shell round it while some
other kind person does a GEM shell. That way everyone wins: people can
choose between the med rez or GEM shells depending on their OS or
hardware and the really adventurous who want to use it in scripted
applications can use the TTP raw.

Happy, happy, joy, joy!

How about a C) option?

Work on a ttp (just the basic engine). and make the Medium special
stosser shell with it, so you can test your TTP, and still have fun
coding, In ANY case, it will be same for you, except that you will
basically cut your program in half. So, still same enjoyment, Probably
even more.
Stoss I am sure can pexec() of some kind.
So, Anyone else with GEM knowledge could do a GEM interface for it.
What would be wrong with that?

hm you know that you can change the color of your desktop. you can
change the fonts, change the icons, change the aes etc? so it looks
nicer. Not making a lot of effort here. Of course W95 prepackages all
these options at the tip of the finger. so much faster to change, to
edit to your tastes.

>But I am talking about my GEM desktop... I wonder what you are talking
>about...
>software...
you use your system exactly how you wish. That's liberty. I understand
that. Just trying to show that atari is NOT stosser only point of
view. People like Duraiden only sticks to atari because of GEM, being
a pleasure as opposed to w95 and his macos. (he has magic).

>
>>Perhaps it would help if you gave us an example of a user interface

>has more features and is a pleasure to use...

I don't think you can beat connect. (of course in singletos, stmedium,
I WOULD guess it is a pain in the butt to use.)
But Think about ConNect taking advantage of newer aes/os? you can do
stuff MUCH faster, efficiently than in freeze. (basic example: Youwant
to put a file on your account, you just drag and drop any file you
want in the connect window. Takes 2 sec to do this manip., and boom,
it's done., Connect use vtxxx extended mode, color supported etc, of
course in STmedium, when you can't (can hardly) display 80 col text.
conNect is a very featured product that old atari, no harddrive, no
high res might not see. so they think it sucks, when it doesn't at
all.

>
>How about art?.. How about Photochrome.. show me better in GEM, what I
>can view on a STe or used to view on my FM....
talking about graphics here. hm to handle graphic, same philosophy as
in games. Written directly on the screen would be faster. However see
what Speed of light does. and STILL perfectly compatible with new

atari, OS/hardware/aes.

>Games we already know are better if not GEM...
Games no doubt.

Once again, it's YOUR thing, do whatever you want. (I mean it)

2096. 3 ST's 4 sale. READ!!!

Newsgroup: comp.sys.atari.st
Date: 1998-04-28 00:00:00 UTC
From: hugodiaz@technologist.com
Message-ID: <6i690vqse1@nnrp1.dejanews.com>
Source record: 102020

I have 3 Ataris for sale:
One STfm, TOS 1.2, 1 meg RAM, no mouse,$35+ postage.
One STf, TOS 1.4, 1 meg RAM, mouse, modificated with switchable hi-speed serial port. Use 28.8 and 33.6 modems! $45+ postage.
One STe, TOS 1.62, 4 megs, mouse, with the hi-speed mod. $65+ postage.

E-mail me, please.

Re: "Detecting long filenames", dbolt@my-ste.demon.co.uk scribbled the following on 29 Apr 98 @ 02:44:25:

d> I was assuming you meant that if "FOO.DAT" exists and a program tries
d> to create "foo.dat", you meant the _name_ "FOO.DAT" would be replaced
d> by "foo.dat". This isn't the case, and that was what I was saying no
d> to. If that isn't what you meant, then it was my misunderstanding.

No, what I meant was the file itself would get overwritten (assuming no check for existing filename). I wasn't referring to the names themselves, but rather the file contents. That is, there's no way for "foo.dat" and "FOO.DAT" to co-exist. Only one will survive.

>> automatically renames it to all lowercase?
r>
r> That's kind of a specialized app. There are word processors that
r> covert to lower case (or upper case).

Yeah, but I only want the FILENAMES converted to all lowercase. IOW, I would
drag LONGFILENAME.EXT to the utility and it would rename it to
longfilename.ext.

r> It would be a fairly simple matter to program something like this in
r> GFA Basic. I could do it for you if you like.

Certainly! :^)

2101. Settings for AB toolkit 5.07

Newsgroup: comp.sys.atari.st
Date: 1998-04-28 00:00:00 UTC
From: Frank_Szymanski@do2.maus.ruhr.de
Message-ID: <199804282222.a25071@do2.maus.de>
Source record: 102025
Body handling: HTML body converted to readable text

Hello,

what are the best settings for D. Little's Afterburnertoolkit 5.07.

My falcon is equipped with a NOVA 2meg graphics card with NOVA-VDI 2.67
and has a single 32meg SIMM installed.

I tried:

Processor options:
==================

Enable cache
Enable cache

TOS Superstack:

Writethrough mode
Use ST-RAM

General options
===============
Write-protect ROM

Display options
===============
Mode: Serialized
Videl layout: 4MB
NOVA interface
NOVA Videl blanker

Memory options
==============
Allocate FastRAM
Enable second bank
Perform RAM-check

but it does not work correctly. The Emulator.Prg produces pixel junk all
over the screen.

It seems that X11 can use the third button as I saw a friend using this
button on a falcon under Linux.

But he has a Mega-STE keyboard and not the original Falcon keyboard.
Perhaps these keyboards (and the TT-Keyboards) are quite different from
others.

Regards,

Benoit

The Atari SVR4 Unix for the TT and Linux support the third mouse button.

Yes it'me, and effectively the third button work as a real third button with my MegaSTE keyboard whereas, before, it doesn't work with the original one. So i think TT & MSTE keyboard are able to recognise 3 buttons mouse. I will take time to look on TT keyboard datasheet this evening to confirm this information and eventualy i'll try to disassemble the 6301 code to check the existance of the third button routine.

It worked in mono under SToNX (640x400) but on under STOnX in 640x480
16 colours. If you don't use the VDI I doubt very much that it will
work on a GFX card. Maybe it will work in mono on a GFX card.

Message-ID: <893755226.19827.1.spot.c3adfca1@news.demon.nl>
Source record: 102052

Hi,

well, so much for this (endless?) discussion about the Pro's and Con's of TOS/MagiC/GEM growing on to a discussion on "PC's vs. Atari" which in turn became "Are there more ST-users than New-Generation-TOS-clone-users".

Listen, Tony's asked (see the Subjectline) for BETA-testers *and* suggestions.

As far as I've followed the follow-ups, there has been very low response to "Who's gonna test this"...
OTOH, there have been several people *suggesting* to make it more 1998-compatible...

If Tony doesn't want that, be my guest, start programming instead of argueing, don't waste any more time and bandwidth, but don't complain if you get no feedback at all...

I explained already once, but for me I'm not interested. Heck, I've got all this stuff up and running under MagiC on my card in Truecolor. Don't even think that I'm gonna reset to a stoneage resolution just to edit my HTML files...

Done that faster simply loading it in my text-editor, looking up all this bloody HTML-language stuff in the docs, putting it in and have a look at the results without the need of two times resetting, hooking up the second monitor to the other port, switching it on and finally discovering I forgot one item...

Tony, do you always compare like that?
"Ford sold more T-models than Ka's, so the T-model was the better car????"
(I'm talking about this new "half-egg-shaped" model, not sure if that's got the same name in other countries).

What we're all trying to yell is: making it a basic TOS program is not what we're really looking for.... Surely it can be used (providing it will *ever* see the morning lite), but will it then be user-friendly? We're not all computer fanatics...

Just wanted to throw another dime into this can :-)

Hi there,

I had COPS running for a few days when I got this NVDI 4.12 for my Matrix card. From then on my mailer system (using Semper/LED) started doing weird things. Crashes, couldn't find it's configs etc. Turned out to be a few old CPX-es, when I removed these it was OK. Eventually I moved on to using Freedom (which has CPX control stuff built-in) and left the troublemaking CPX-es out, and I have no more problems. This memoryhandling problem is the same in MagiC, the only advantage is it crashes more decently: when you get a "hanger" in TOS you need to reset 99 times out of 100, under MagiC that's once in a hundred... :-)

BTW: Wilfried Behne himself was pretty vague when I asked him about COPS and especially Wdialog... in fact Wdialog adds routines to TOS that are normally done by MagiC. When I tested the Jinnee desktop here under MagiC it appeared to be needing Wdialog as well (it simply crashed running from MagiC with Wdialog left out, and that's not what its docs say...) So I asked Wilfried: "Do I need to run Wdialog next-to-MagiC?", here's what he literally answered:
".........eeeerrrrrrr (very short for what he actually said!) ...sometimes you do, sometimes you don't..."
(Maybe we're talking about "Schweineprogramme" here too???)

Could you perhaps add one line to the documentation- under "Path
Preferences"- e.g. "The dialog will also be shown at startup if any of
the preference paths are missing"? This will point people in the right
direction, and if they don't read the docs, they have only themselves
to blame.

Hi Tony,

It seems you have done it again!

Tony Greenwood wrote:

On the ST all programs also have the same menu system for easy navigation. This makes the program look more professional. In fact, the PC people just caught on with windows 95, on the Atari we have had a standard since '85. This standard has been under continues improvement since.

> The finished program will work on All ST, STF, STFM's, STe, Mega and
> Mega STe's, Falcons and TT's, Will be hard coded to a 640x200x4 ATARI

> environments will not be supported,

As you are obviously using STOS for your interface I think it is wise to do atleast a ST HIGH interface as well; ST HIGH is a far more accepted fallback standard for 'professionel' software then ST MED. It also gives the possibility for ST HIGH users to use the software.

I think it won't be too much trouble to test the program in ST HIGH under pacifist.

If you want to make as much people happy as possible use an .ttp core and and ST MEDIUM shell around it.

Bye, Hans

Yes, it is. It is workinh under X windows on Unix boxes.

> Why do you not try it on your ATARI...You do own one don't you ?

I think Magnus tried it out on his Atari. My guess is that he simply
was too lazy to disable his great Nova graphics card and switched
to Linux, started X windows, started STonX and tested the software
under standard resolutions. Maybe he didn't even switch to linux, but
simply fired up STonX under MINT. This way he didn't have to degrade
himself to single tasking environment and a stoneage resolution.

Hans

2120. PGP 5.0i ATARI-port available

Newsgroup: comp.sys.atari.st

Hi out there,

Some time ago I managed to make an ATARI port of PGP 5.0i.
It's based on the latest 50i-unix sources.
I've tested it with tcsh-shell (from KGMD, running MiNT) and Mupfel
(running Magic 5.x) It's still a beta-Version, but it runs very stable -
no bombs occured at all. Long filenames are not necessary.

binaries are available at:

ftp://ftp.ifi.uio.no/pub/pgp/5.0/atari/

regards,
Harald

If you dislike GEM, you must surely hate Windows. So what do you use on
your PC? GEOS?

You are ofcourse right, but if you make programs in 98 when clones are getting more and more common and more people upgrade their old STs/Falcons with lots of strange stuff as GFX cards new CPUs etc you must be prepared to face this. Also, if we want the TOS platform to stay alive for atleast a decade more we must let people buy new hardware and nobody will buy a Milan if 0% of the new programs works for it. Maybe we just should bury our heads in the sand and don't look forward. In most cases it's not that damned hard to make a program work on a gfx card, is it?

Also, we have a few "nutheads" in here so what do you expect? A tea party? If I meet Tony in real life I would still buy him a beer even though our thoughts about how things should be done are on totaly different tracks! :-)

So if Tony has any business in Gothenburg Sweden, the heart of scandinavia (occhh.. that sounds coold), this summer I will buy him a beer even though he calls me a idiot (which I havn't called him BTW....)!

> >think COPS is a great program!

Well, the problem is that MagiC can do so much more than TOS, so in some cases
you need those features and it wont run on TOS anylonger. Now, that isn't
always true, but in some cases it is. TOS just doesn't cut it in some cases.

> I had COPS running for a few days when I got this NVDI 4.12 for my Matrix card.

Why doesn't anyone use Z-Control? It works very well on my system even though
it's a early version. A shame that it's not being developed anymore.

> left out, and that's not what its docs say...) So I asked Wilfried: "Do I need

> (Maybe we're talking about "Schweineprogramme" here too???)

Probably. There are lots of those around and I guess sometimes you can even call
MagiC that. ;-)

My Atari ST is still used every day in my business.
I have programmed a nice database out of Superbase.
I have a series of Auto-folder programs (LGSelect,QuickST,
Cache, RamBuffer, etc) which make things a bit easier, but
this Magic OS sounds interesting ...

What is it like, what can it do, and where can i get it ?

> Crashes, couldn't find it's configs etc. Turned out to be a few old CPX-es,
> when I removed these it was OK. Eventually I moved on to using Freedom
(which
> has CPX control stuff built-in)

Hello again.
Yes, I've heard that FREEDOM has built in support for CPX, but I've heard some people saying that the latest version was getting quite clupmsy. (I haven't seen it myself, so I'm not refering to my own experience!) I guess that there is some demo of FREEDOM to download from INTERACTIVE, so maybe it's worth checking it out, since COPS1.07 doesn't seem to like 4Mb to play with on my STe.

(By the way, I can also tell you that COPS1.06 most likely messed up my C:\ bootsector last summer when it failed to save its *.INI-file. Perhaps one shouldn't complain when it comes to free programs like COPS, but nevertheless, these are quite nasty bugs, aren't they?)

Finally, are there any other programs that handles the CPX-modules, apart from FREEDOM, and the old XCONTROL?

Thanx in advance!

2127. How do I add a CR to my chatfile?

Newsgroup: comp.sys.atari.st
Date: 1998-04-28 00:00:00 UTC
From: Blair Dean <blair_dean@hc-sc.gc.ca>
Message-ID: <3545DC01.329@hc-sc.gc.ca>
Source record: 102067

This is my chatfile:

```
ABORT 'NO DIALTONE'
ABORT 'NO CARRIER'
ABORT BUSY
"" atz&m4&h1
OK atdt5201135
CONNECT ""
oix 2 name: username word: password PPP. ""
```

My ISP has changed their configuration and I have to add a carrage return after I get the CONNECT to get to the login menu. How do I do this?

Thanks.

Hello!

I'm looking for a little program again :)
It's called "Logbuch" and is a program starter for Magic that gives
a popup of earlier started programs. I've searched the 'net and
even mailed the authors (Uwe & Jurgen Holtkamp) - no result..

If anyone could mail it to me or tell me where to get it, I'd be
grateful.

Thanks!

- Petter -

Maybe we all should get back to "preschool" so we understand what Tony
is talking about and can use watercolours and chalk. :-))

Windows must look like one of those books where you can fill in the colours
by your self. Funny, the systems I have seen doesn't differ very much from
a modern GEM system. But I guess I'm living on another world.

Maybe Tony could put up a screen shot on his favourite Windows programs
so we have something to compare with and then we can put up a screen shot
from a modern GEM desktop?

But the reason to make both thing look professional is quite the same.
It is a bit contradictorily. You want to have a uniform and
professionaly
looking web page, but the tool you are going to write has a stupid stone
age, non gem 640x200x4 interface. Why not get professionaly on the tool
making too? The web page has to look good on any computer in any
resolution (at least 640x480x256 a assume). And the tool only works in
an
louse ST MED resolution?

Yes, everyone wants to have things that look nice. That's why they are
asking you to do it in GEM. When you are used to work at 640x480
(minimum) and a refresh rate of 70Hz or better, ST MED doesn't look

nice. BTW: the 3d look is available in the mordern versions of GEM.

Strange. Pacifist does well in ST HIGH overhere.

>
> You say i cant support 99%, Work it out, we all did.....

So? I don't get it. I would not say that it supports any res on any machine,
let it be a ST with overscan hardare or a Falcon which has as many different
graphics modes as you want or a Falcon, ST or TT with a GFX card. You said your
self that it would be hardcoded for 640x200 4 colours. How can that be all
STs, TTs and Falcons? How many wants to reboot the computer in order to find
a video mode you support? How many Falcon or ST or TT owners run in ST medium
resolution?

It's like saying that I support all computers as long as you run Linux with
STonX at a speed of a VIC20, but it WORKS! Cripple a machine is like killing
it.

It would be interresting to see how many users use a none modified ST/TT/Falcon.
Maybe it is 99% but I doubt it.

> Maybe your just not very good at explaining yourself?, Do you know any

> is boring,

GEM is boring and Windows is not? Now you've got me baffled. To me
Windows looks like GEM, but on closer inspection turns out not to be.
(E.g. it hides all your files, and you have to start up a program to
find them.)

> Windows v DOS..Dos is plain black and white, windows has all the
> things I like... THINK ???????????

DOS was 16 colours last time I programmed it. (Sure, you don't get
to choose the colours, and there's no neat stuff like colour cycling.)

Perhaps it would help if you gave us an example of a user interface
you *do* like. Freeze Dried? Trip-A-Tron?

2140. Newsie 88?

Newsgroup: comp.sys.atari.st
Date: 1998-04-28 00:00:00 UTC
From: starlord@ptw.com
Message-ID: <3545fb02.0@news.ptw.com>
Source record: 102080

I am wondering about Newsie v.88, I need to give some info
1st.

I am the poster/updater of the Telescope FAQ file on s.a.a.,
I am also the Prest. of the I.A.R. and as such, when a New
member signs on, I send them a copy of our 'Gold Book'
sporting code and a Membership list with them added on.
All three of these files are ASCII files, (I use the text/
capture buffer of Flash.1.6 to do the work!). Last night
I tried to send the Telescope FAQ, and the other two files
to a member, the FAQ I tried to POST to S.A.A..

Now the trouble, Newsie totaly locked up the system, at 1st
I saw the modem lights flash, oh it was going slow, but I
figured at lest it was going, HaHaHa, after almost 2 hours
I found the ISP had dropped carrier and my TT was locked up
100%, the keyboard reset wouldn't even work, I had to hit
the reset button itself.

Does v.88 fix this? I had to log onto CIS to send the files
via the account there.

Hi Terry,

m>> Try 'echo 'ALT 07' ' where ALT 07 you need to press ALT and 07.
TM>
TM> I tried that from the command line. If I use the numeric keypad all it
TM> does is print the characters "07". If I use the alphanumeric keyboard,
it

TM> simply rings the bell for all numeric characters (and maybe alpha
TM> characters), because it's an illegal keypress (with Alt held down).

Sorry, This is under un text editor (QED, Everest See below)

TM> It really wouldn't help me anyway, because I want to add a line to my
TM> batch files that rings the bell. (It didn't work from QED, either.)

It works fine with QED 4.10 and Everest 3.6 ((ALT 07) with the numeric keypad)

With QED this is more simple:

Go to the menu 'Special/Character set' (or ^Z) and choose the ... seven
character in the dialog box.

Hi,

As a result of recent threads about thing v1.09, I got curious about using thing with Geneva as a multitasking source. I can't get thing to run with geneva (2 bombs & TOS error #1). This happens if I run thing from within geneva as a shell or if I try to run thing from within geneva's task manager. Has anyone gotten these 2 programs to run together?

Thanks in advance,

David Klimchak

> Best Regards,
> K. Hampf

well you could have sent this to Milan(www.milan.atari.de) and
Phenix(centek@graphity.fr) as well?! :) That's where a lot of real
development
is happening also.
I agree with all of the above, the Motorola 68xxx series has seen its
day,
and development using the PowerPC chips would be awesome. I can't
imagine
a skinny TOS running on fat hardware like that, very fast!
But most knowledge I think is with the Motorola 68xxx series, and not
much is
known I should think, about the PowerPC chipset, so it would be very
difficult

to adapt to the PowerPC, rather than adapting to the next highest
chipset
in the 68xxx series. Of course, the 68060 is the end of the road non?
Or is there a 68080?
The latest hardware is capable of using PCI cards, IDE devices, etc so
that's
not a problem, and you have a good point about MiNT (TOS & UNiX)
although I
don't know how stable MiNT is.

Ok, I guess that there are reasons to use specific features. BUT I think that those should be used when, and if necessary. It would be a great shame if there are great programs coming out, that with ease could be made to run on, let us say a late TOS version with AES 4.1, but will only run on MagiC because somebody assumed that everybody is using MagiC.

Maybe I also would have bought MagiC, if it hadn't been totally incompatible with my Cubase version. (I've heard that Cubase doesn't like multitasking systems at all, in fact)

Hi Nick
Have the full registered version.
Assume that all the "strings" sent in the dial script for Stik would
apply to Wensuite? and would have to be put in the PPPLINK.CNF file
as the screen doesn't have enough spaces to accomodate all I assume is
required.
A copy of this file would be helpful with what needs to go where and
in what order.
Thanks for any help

Bonsoir,

Dans l'article <354ab621.6550977@news.zetnet.co.uk>,
Tony Greenwood, <paxton@zetnet.co.uk> a ��crit :
����OK I tried, I offered a small test to see if I could compile something
����to work on the setups you are moaning about.. One of you isnt even
����using his hades, the other doesnt seem to own an atari... how the hell
����do I support you when you wont test ?

Don't be stupid ! I use my Hades every day when I'm at home ! I'm not
at home for the moment, how could I use it ? I won't go everywhere with my
Hades !
As soon as I'm at home, I'll test it... But if it's work in mono with
an emulator, I'm optimistic : it should work in mono on Hades.

I ment to say that it did work in 640x400 mono byt _not_ in 640x480 16 colours.
When I got back to the desktop in 640x480 16 colours the screen was corrupt.
Looks like the program tried to set the resolution or something.

I guess it depends on how you define "works". For me a program which works
is a program which I can launch from the resolution I'm using and doesn't
need me to boot in any specific resoultion or with specific settings. A
program which doesn't live up to that goes directly in the trash can.

I won't agree with the 75% mentioned, but I think that those that still have
there ST's up and running use their machines quite frequently.
I've seen quite a few people using their ST(e):s for surfing and mailing and
stuff.

: must let people buy new hardware and nobody will buy a Milan if 0% of the new
: programs works for it.

On the other hand if there are loads of old STs in cupboards then a good way
to get them out is to make some new software perhaps? Eventually they may
upgrade. So we need a range of software.

True you can make software run on every single system but Tony is aiming at
the best program he can write at the most users. It could be here in a matter
of weeks. Or we could wait for him to learn C, get to grips with GEM....

ST in cupboard gathers more dust.

Who's gonna volunteer to do the GEM version then ?
BTW I'm doing the PC version with Tony's blessings :-)

Cheers,
Davy

Are you also running Windows in 640x200x4 colours?

> thats why I don't like GEM

That's why I don't like 640x200x4 very much. BTW you can change the green;
my lo-rez desktop is pale blue. (Yes I do use med-rez sometimes, mainly
for KCS).

GEM in 640x200x4 looks worse than Windows in 640x480x256, no surprise
there. But give them both the same video parameters and I honestly
prefer GEM (by a small margin - add a replacement desktop such as Thing
and it becomes a substantial margin).

With GEM I always have the feeling that all my files are "there" on
the desktop. With Windows I have to open up the Explorer to look at
them.

Can't remember what Photochrome looked like, sorry. I will admit to
using GEMview rather a lot (most of the 100 or so images on my web
site have been through GEMview and/or ImageCopy at some stage).

Of course Apex Media isn't GEM, but it ain't STOS neither. 8>

I apologize to Gary. I sometimes say "rtfm" and I don't do it myself as
well as I should ;-)

My first attempt was with the alias file in the mail folder (where I've
told POPwatch to put incoming mails) and it didn't work, but sure it'll be
better in the POPwatch folder.

I'll try again.

Thanx for the tip, John.

Source record: 101908

Hi Tony,

just grabbed the file from your site.

Running my regular stuff TT under MagiC, NVDI 4.12 on GFX card: activating TEST.TOS the whole bunch got stuck, and I mean S-T-U-C-K! Only way out was switching the computer off for a few seconds.

Next on the card, without MagiC: another hang, but this time I could easily reset with CTL-ALT-DEL.

Next in TT-medium: got the first line, "Hit any button", then it hanged.

Next in ST-High (running with only ST memory): looked OK: Screen with "hit any key", then after a second back to my desktop.

Hope this all helps,

>Certainly! :^)

That's a little more complicated. I was thinking of the UPPER$(a$)
command and didn't realize there's no LOWER$ command. (Why not?).

I'm not sure that GFA will even _handle_ long file names.

Maybe there's a TTP with Mint that could do this.

You shouldn't need that, since the SCSI architecture is a daisy chain,
just start the chain with you SCSI adapter, then the HD to the adapter,
and the CD-ROM to the HD. You end the chain with a SCSI terminator and
you make sure the SCSI ID numbers are correct.

Cheers,
Nick

Hi!

It works indeed!

I have a TT keyboard on my Medusa and shortly bought an Alfa data 3-button mouse for Amiga. I had to switch 2 little jumpers and now it works...

Linux supports the middle button. Before that I had to set Emulate3Buttons in the XF86Config and press both buttons together without shifting the mouse. But that was messy.

If you have a 'normal' ST keyboard you can just connect the UP line of the Joysick 2 port also to pin 5 of the mouse port. That's it!

Source record: 101916

Greetings!

Unfortunately, my news reader (Free Agent) won't
crosspost properly, making it necessary to multipost.
Believe me, I've tried to crosspost properly! The
software goes through the motions, but the article
never appears. (Do you remember a previous posting
in which I apologized if an article appeared 3 times,
when it only appeared once? That was the debugging
session, and submissions 1 & 2 never got out.)

And normally, my subjects fit neatly into one news
group, making crossposting unnecessary. This one
just seemed like the exception (did I mention I was
trying hard not to drool in public?).

Thanks for your understanding.

Atari Computing number 7 (or perhaps number 8) had an article about this. Apparently you have to have at least version 1.20 of Thing to be able to use it instead of Neodesk with Geneva.

No, you don't have to open Explorer to look at the files. You can open
"My computer" instead. If you want to have a GEM like desktop just
move the HD icons to the desktop (you get a question here, hit yes)
and you have GEM :-)

>Can't remember what Photochrome looked like, sorry. I will admit to

Photochrome is a picture viewer that can use 32000 colours on STE and
4096 colours on ST.

>Of course Apex Media isn't GEM, but it ain't STOS neither. 8>
GEM is way to slow for the stuff that Apex Media need to do.

Hi Nick

I've been through all of that, and I have posted it several times so
I'm not going to describe everything again. The fact is I still can't
get the CD-ROM drive and hard drive in a SCSI chain together, either
one works or the other.

And I've bought another adapter with different software with different
results. That is why I'm asking?

Cheers! for now
Steve

For what it's worth, on my stock TT, I have an ICD FA*ST box attached to my DMA port, and my CD reader attached to my SCSI port. I use ExtenDOS Pro.

Works fine.

Umm, either address should have worked. They both go to the same place
(at least on this side of the world:).
The Girl is off a Mac CD called Sinka. The artist is outstanding. The
last one I fell in love with like this was the Fremen Chani from Dune.

It doesn't work.

Under MagiC (hope springs eternal and I thought it was the text interface thingy you were talking about) it doesn't just crash it causes a fatal error in GEMDOS and brings the system crashing down even when set to single-tasking mode. Ouch!

Under TOS 1.62 in mono using Teradesk but with next to nothing else in terms of system extensions it causes the key click to start up after exiting (I have it switched off in the control panel) so it's fiddling with things it should be leaving alone :-(

I've never claimed to have any knowledge on the subject, but can't you chain SCSI drives? My SCSI hard drive has two ports, and I think you can just run a cable out of the second port to the next device, and give that device a different ID number. Can anyone confirm or deny my assumption? Do your SCSI drives only have one port?

From: kws@Radix.Net
Message-ID: <6i7tuqrvd1@news1.Radix.Net>
Source record: 101927

I have 4 different CD Roms for sale:

Toad Computers Atari Compendium CD $10 each
Toad Computers/Suzy B 2 CD Set (Shareware/PD) $20 each
System Solutions Ultimate Cubase CD $30 each (limited supply)
Crawly Crypt CD Volume 2 $10 each (very limited!)

For a description of the the top 3 CDs, check out my web page, the CDROM
section. Haven't done up a description for the last CD.

Add $3.50 S&H in the US for priority mail shipping.
Shipping to international destinations can be arranged.
MD Residents will need to add 5% sales tax.
Currently, I can only handle money orders in US Funds.

SCSI drives are made to make a chain... The only case I've seen two
scsi ports are UltraWide SCSI and PC with two SCSI cards (basically a normal
one and a limited one given with a scanner - and it often ddoesn't work
because of conflicts...).
May be his SCSI chain has already 8 drives, so no room for the CD
driver ? Lucky man :-)

>then instead of 75% of these ST unused.

Well, you did say you hadn't spotted any ST users in here. My first
point is that there are several including me, David Bolt, Hallvard
etc.

>And still, you are using a
>harddrive, you have RAM, and both monitors. so :)

Which was my second point: those of us who are online with our STs are
the ones who invested in upgrades in terms of both hardware and OS.
Most will at least have bought a hard drive and be running in mono at
least part of the time. A multitasking OS is also likely. Hence Tony's
med rez singletos only program is as unusable for us as for you lucky
Falcon/TT owners.

>What a luxury, must have cost you a lot of money to have all that ;)

The hard drive and RAM yes (hard drive prices are now about a third of
what they were when I bought mine). The colour monitor cost less than
the switch box for it... :-)

Freedom 2 is shareware but the author has removed the restriction now
so you can use it for free but beeing a serious Atarian you will send
him the shareware fee isn't it.

AFAIK this is the only (almost) free fileselector which supports long
filenames. Furthermore it's still supported by the authors. You can
find the latest version of Freedom at the Belgian ftp-site
193.190.205.13 archive/atari probably in the incoming dir. Look for
fredm204.zip
Boxkite is another shareware fileselector which can handle long
filenames without any problem. It must be on the Belgian ftp site
also.

The printing quality is so good as you have configurated Calamus.
Calamus can print very good but you need some experience and lots of
try and error. If everything is good configurated Calamus beats
Imagecopy with ease.
>
>>that one can hardly see
>>the differents between 256 color mode and true color mode.

I'm talking about Calamus. As you aren't able to run Calamus in
true color mode how can you say then that I'm wrong? :-))
I admit there is a different but only noticeable when looking at 1:1
Tell me why are you so keen to use Calamus in true color mode? I
really can't understand why hobbyists want to use true color mode.
BTW: which picture formats are you using in Calamus?

Until I bought myself a Hades I was using Calamus always on a TTM195
screen with me TT030. With a colorscreen I found Calamus far to slow,
even in 256 color mode. Do you know that I today still use my
TT030/TTM195 to make color scans. I really don't need true color to
see if the scanned picture if of good quality.

>for unknown user TESL-L. Import? Yes/No", so you just had to hit the
>return key a few times and all the mail would be loaded in.

Yes indeed there is a way.
That is what I do. First I retrieve my mail with POPwatch. After
closing down my Internet connection I take a look at my imported mail.
If there are file names other then my mailbox name I open these files
and write down the first part of the e-mail address (part ahead @). I
also try to find out for which sub mailbox the mail is intend.

Then I open *mailfold.inf* and edit this to hold down the mailbox name
and first part of the e-mail address
e.g.
frognet tlinbo@*
anuran WATERDRAGON@*

this means that all mails coming from tlinbo@ will be extracted to the
frognet mailbox and mails from WATERDRAGON@* to the anuran mailbox.

mailfold.inf must be placed in the same dir as your incoming mail

Sorry, I have 1 MiniS hard drive purchased from System Solutions with
a DMA-SCSI adaptor (not the ICD one) with internal termination.

SS told me all I needed to do was make sure the hard drive was at the
end of the chain and all should be well. I still can't get the cd-rom
drive working with the hard drive. If connected with the hard drive
and cd drive and I use the adapter I get the access perfect with the
hard drive, extendos acknowledges the cd-drive but can't access it; if
I use the ICD Link 2 (I believe, yep I've even bought another adapter)
with the 2 drives, I get access to the cd-drive but everything is up
the pan when it comes to the hard drive:(

Connecting the 2 adaptors in parellel seems like the most logical
resource. However, System Solutions did mention if it was due to the
drive then they would sort it out. The question is 'Will They' after
all the hard drive is 4 years old, and never had a cd-rom attached to
it until now.

Cheers! for now
Steve

>doubt if POPwatch would understand "default username" at present.
>Might be worth experimenting if you are feeling adventurous...

I created a ALIAS file like this:

default deliver
tesl-l rosco

It works! Trouble is, I don't know where it is working....I tried it
first in the NOS\SPOOL\MAIL\ folder and it didn't work there, so I
created mulitple copies in NOS\SPOOL\, NOS\, and the POPWATCH folder.
One of them is working!

This is a nice feature that is hidden away in the docs, and then
explained in a rather obscure manner. Too bad.

Thanks for your help John and everyone else.

Well, they're busy working on the new machine, and
I'm trying not to drool excitedly in public. Plus,
I'm not really associated with the project, so it's
hard to know just how much I should say.

I do know (via email) that the promised survey on the
Wizztronics page will be posted Sometime In May, which
is why I'm suggesting that the deadline for ideas and
suggestions is drawing near.

Since I consider myself a "recreational programmer"
(I know enough to get by, but not enough to create a
sale-able program), I'm doing two things:

1/ Sending in suggestions to make recreational
programming easier, both from a hardware
standpoint and from a GEM/AES standpoint
(since ease of use AND ease of programming
causes system growth and acceptance), and
2/ Advising the experts I come across that their
input is needed, right now!

The 680x0 architecture is already MUCH more efficient
than the x86 architecture, and GEM ... for those who
choose to use it ... is already MUCH more efficient
than MS-Windows; so concentrating on ease of use and
ease of program development is an important consideration
at this time!

Since Microsoft's[s&m] house-of-cards[tm] seems to be
nearing it's critical height, the availability of
another stable, reliable operating system (TOS) and
operating environment (GEM, MAGIC, et. al.) gives us
an edge we haven't had in years. There's a slight
chance we could overcome the dominant industry system,
in much the same way Microsoft overwhelmed the prior
dominant industry system (CP/M).

You may think your idea is "so obvious" that they can't
help but implement it, but my passing reference to an
"evnt_joypad()" call resulted in several postings and

an email or two that said "How come they haven't done
that yet?"

Just to be on the safe side, SUGGEST THE OBVIOUS!

In addition, Steve Cohen has stated for public consumption
that he receives email suggestions daily, and that many of
the ones he reads are "...brilliant!"

Just to be on the safe side, SUGGEST THE OBVIOUS!

Thanks for letting me ramble.

(This was going to be a quick note ... sorry it
ran so long. Just excitable, I guess.)

> I'm still amazed that something like this
> hasn't been mentioned here before though...

Well, they're busy working on the new machine, and
I'm trying not to drool excitedly in public. Plus,
I'm not really associated with the project, so it's
hard to know just how much I should say.

I do know (via email) that the promised survey on the
Wizztronics page will be posted Sometime In May, which
is why I'm suggesting that the deadline for ideas and
suggestions is drawing near.

Since I consider myself a "recreational programmer"
(I know enough to get by, but not enough to create a
sale-able program), I'm doing two things:

1/ Sending in suggestions to make recreational
programming easier, both from a hardware
standpoint and from a GEM/AES standpoint
(since ease of use AND ease of programming
causes system growth and acceptance), and
2/ Advising the experts I come across that their
input is needed, right now!

The 680x0 architecture is already MUCH more efficient
than the x86 architecture, and GEM ... for those who
choose to use it ... is already MUCH more efficient

I was assuming you meant that if "FOO.DAT" exists and a program tries to
create "foo.dat", you meant the _name_ "FOO.DAT" would be replaced by
"foo.dat". This isn't the case, and that was what I was saying no to. If
that isn't what you meant, then it was my misunderstanding.

>> although I don't know if it does with MINIX.
g>
g> Interesting. I was unaware of that!

I'm not sure if people around here are aware, but Dirk Haun has continued to
work on the LHArc TTP version since Christian stopped working on it. Go to
Jo Vandeweghe's UTSI site and look in the archive section to locate both
v3.13a in English and German as well as the sources.

The update information compared to the last shell version is as follows:

==========

Version 3.11 junior:
- Workaround f�r einen Fehler in MagiCMac (Entpacken funktionierte
nur auf dem MagiCMac-Volume). Besten Dank an G�tz Hoffart f�r das
entscheidende SysMon-Protokoll.
Dieser Fehler ist ab MagiCMac 1.2.8 beseitigt.
- Diverse Abfragen auf MiNT bzw. den MiNT-Cookie entfernt. Dadurch
verwendet LHarc einige neuere Gemdos-Aufrufe auch dann, wenn sie
nicht von MiNT (sondern z.B. von MagiC oder MetaDOS) bereitgestellt
werden. Dies sollte sich bei der Behandlung langer Dateinamen
positiv bemerkbar machen.

Version 3.12 junior:
- neuer Schalter -F aktiviert die 5+3-Regel beim Entpacken langer
Filenamen auf eine Gemdos-Partition. Gegen�ber dem Abschneiden nach
dem achten Zeichen gibt es so weniger Namenskollisionen.

Beispiele:

langer Name ohne 5+3 mit 5+3
---
tclLoadAix.c TCLLOADA.C TCLLOAIX.C
tclLoadAout.c TCLLOADA.C TCLLOOUT.C
tclLoadDl.c TCLLOADD.C TCLLODDL.C
tclLoadDl2.c TCLLOADD.C TCLLODL2.C
tclLoadDld.c TCLLOADD.C TCLLODLD.C

- neuer Schalter -O: Ein direkt nach dem Archivnamen �bergebener
Ordner wird nicht mehr angelegt sondern aus dem Archiv entpackt.
- Kommando 'e' legt keine leeren Ordner mehr an.
- Kommando 'm' und Option -d l�schen jetzt auch Ordner.

- Schalter -D funktioniert jetzt wie im Manual beschrieben, d.h.
Dateien, die im Quellpfad nicht mehr vorhanden sind, werden aus dem
Archiv gel�scht.
- "Usage"-Anzeige beachtet jetzt $LINES (Anzahl Zeilen in der
Console) und kann mit 'q' abgebrochen werden.
- wenn die Ausgabe umgelenkt wird, wartet LHarc nicht mehr auf eine
Taste.

Version 3.13 junior:
- Schalter -n funktioniert wieder.
- Schalter -y verursacht keinen Absturz mehr.
- Problem mit case-sensitiven Filesystemen (z.B. RAMDISK.XFS)
behoben: Wenn ein Pfad nicht gefunden wurde, weil der Ordner erst
noch angelegt werden mu�te, wurden die Namen von zu entpackenden
Files in Gro�buchstaben gewandelt.
- Flag -S (Gro�-/Kleinschreibung erhalten) kann jetzt auch beim
Auspacken angegeben werden. Damit kann man erzwingen, da� beim
Auspacken auf Dateisysteme, die Gro�-/Kleinschreibung nicht unter-
scheiden (z.B. VFAT) nicht automatisch alles in Kleinbuchstaben
gewandelt wird.
- Wenn beim Update eines Archiv (Kommando 'u') keine Datei
hinzugef�gt, ver�ndert oder gel�scht wurde, dann wird das Archiv
jetzt nicht mehr unn�tigerweise neu geschrieben. Damit bleiben
Datum und Uhrzeit des Archivs unver�ndert.
- Wenn als zu bearbeitendes Archiv ein Link auf ein Archiv �bergeben
wird, dann bearbeitet LHarc nun wirklich das Archiv und nicht den
Link.
- Wenn ein ganzes Laufwerk gepackt wird (Laufwerksicon auf LHarc
ziehen), dann hei�t das resultierende Archiv jetzt <Laufwerk>.LZH
(entsprechender Laufwerksbuchstabe) statt nur ".LZH".

Version 3.13a junior:
- Man kann jetzt wieder Ordner zum Einpacken auf das LHarc-Icon
ziehen (unabh�ngig von den Einstellungen des verwendeten Desktops).

One program that was really bad was STDCAT around v4.x I'd get swapped FATs
on successie floppies that I was cataloging B^{<

The cause was FCOPY3's writing of the same serial number to all disks.

Is it really true that MGFORMAT doesn't set random serial numbers?!

I don't use the MSTe now - not for over a year now when I got the TT.
However, if you're getting perfect transfers with ZModem then I wouldn't
suspect the port itself. I rarely ever saw CRC errors and when they did come
it was usually down to a bad line...

r>>> I found an english version of the package (FSER096E.LZH) but it

I've been using ZControl for quite a while now and at v0.24 it runs happily in both single and multitasking modes, as well as allowing 12 CPXs to be viewed at a time, multiple windows to be opened, saving of window positions and iconify at startup under Magic.

I can't remember the last problem I had with it (though it does have some minor problems...)

It is quite stable, really (I even managed to run Le Redacteur!;-)

2214. MagiC and AutoPark

Newsgroup: comp.sys.atari.st
Date: 1998-04-29 00:00:00 UTC
From: K�re Hampf <k_hampf@yahoo.com>
Message-ID: <3546d67c.0@d2o29.telia.com>
Source record: 102038

I just can't get the AutoPark to work in MagiC on my F030 ... in TOS it's Ok, but when I "reactivate" and the drive spins up, MagiC says data on my drive might be damaged, and I must do a full cold reboot to get MagiC to read from the drive again.

AutoPark is from the HDDriver 7.50 package and I currently have MagiC 5.13 but will probably get 5.20 soon, will that help?

BTW, can you use VFAT volumes from TOS?

What do you do when you old ST brokes down and their are nowere to be
found. You run it on a Emulator on more mordern hardware or buy a clone.
Neither will run your software so it's a no no.

> >(beta tested or whatever you want to call it) running your program.

> with your gfx card or a hades, you tested that on mono stonx....

Well, it was a start. If it wont work on a good emulator which even emulates
ST video I would belive the chance that it works on a Hades is rather slim.

> >Sorry, this was the last time I did some testing for you even though

r> That's a little more complicated. I was thinking of the UPPER$(a$)
r> command and didn't realize there's no LOWER$ command. (Why not?).

Probably because UPPER$ was put in for making strings non-case sensitive, and there's no reason for LOWER$ for that use. (Still, I thought GFA had a LOWER$, too.)

r> I'm not sure that GFA will even _handle_ long file names.

I would think it would, but I don't know.

r> Maybe there's a TTP with Mint that could do this.

Someone was nice enough to write and send me a Drag to Lowercase utility. If you'd like a copy, let me know.

From: starlord@ptw.com
Message-ID: <3547a4d8.0@news.ptw.com>
Source record: 102099

I have a question, WHY does Newsie put TWO e-mails together
at the same time??? I notice this today, I had e-mail from
to places that are NOT the same place and Newsie had attached
one to the other and had broken up the 2nd one mid way and
put it as a <No Subject> after the 1st one. What's up? Is there
some kind of a setting I need to check?

It doesn't do it with all, but I am getting about a 25%
combo of e-mails tied together.

Hi Kevin,

No problem on my side. I use a Stacy with an internal 40 MB HD, and a SCSI zip and CD-ROM connected externally with a LINK II interface. So it can be done.

Feel free to ask for more details.

For what it's worth, on my stock TT, I have an ICD Link attached to my DMA port, and in that chain are a Syquest 105 removable drive, with two SCSI connectors, and a NEC25 single speed CD ROM drive with one SCSI connector. ExtenDOS Pro finds and runs the CD drive. On the SCSI port I have a ZIP drive. There is no reason for any of this. It just grew.

The SCSI driver I use is ICD Pro. Suspect the hard drive, and/or try the ICD driver. It is available cheaply. According to their web site, they are beta testing a later version.

Good luck.

jhaslam <jhaslam@fortress.org.uk> writes:

>Does anyone know of a program that will handle stereo pictures for use with
>LCD shutter glasses, which will produce left and right images sequentially??

There are several programs around that will allow a script to
flip between two pics, designed for red/blue glasses. Cybertek
had a proram for that using LCD shutter glasses, and they
sold those as well. Writing a proram to do the same should be
fairly easy in GFA basic or similar. The glasses will be harder
to come by. If you can find a pair of the Sega 3D glasses,
a circuit diagram is available to make them work(I have a pair,
to start this very project someday).
I boough my glasses at Federated whe they had their 50% off
closing sale, so they were $25.00, which says how long this.
project has been on hold.

Dear Atari users:
I have uploaded the first part of the Unofficial MagiC Support Page.
It can be found at :
http://bulli.com/basement/index.htm

Currently There is only a translated ENGLISH RSC file for use with Cab 2.6/ and a Snapshot
of my Desktop that i believe everyone who thinks GEM is boring should look at. (hint,hint tony).
One final note. I would like to hear what fellow MagiC users would like to see on this page. If you have any idea's on sections (ie a message room, trading post, etc) please let me know
about it before not too long And I will add it. Remember, i created this page because I believe there is a GREAT need for it. For example, Do you know how hard it was for me to find the NBD IDE patch that works with the newer versions of magiC? Hopefully, this site will solve problems like that.
MagiC is fast becoming a Majority OS on the atari platform. I am surprised there are not any
real pages dedicated to it. (until now:-)

No, I have sent MEGABYTES attached with Newsie mail. Can't understand what's happening here. Is the FAQ plain ASCII? No wierd formatting characters etc.? Should go fine as a simple 'merge' into the mail file. Have you managed to send smaller files? Try it! My guess is that there is something amiss with your editor/Newsie set-up. Can you actually see the file as 'Queued' in the OUTBOX before you try to send?

From: Alyre Chiasson <chiassa@umoncton.ca>
Message-ID: <3548666C.D9FBD07E@umoncton.ca>
Source record: 101844

Hi,

I am running Newsie .88 and have run into the problem that despite having the remove mail from server option checked my mail is not removed from the server. Every few weeks I have to call to have them flush my inbox, which they have been kind enough to do so far. Does anyone else have this problem? Any suggestions? I suspect my ISP has changed his software, the problem wasn't there several weeks ago. Is there anything I can ask my ISP provider to do or switch to as far as a mail protocol? The problem was there when I was using a Slip account and also there now that I am using Sting and a PPP account. I have a MegaSte 4.

Thanks

Alyre Chiasson

Actually, stability hasn't been an issue for a long time. To get all the features you need for MiNTnet and such, I would recommend any version after 1.12.5 (non-blocking fork is not essential in most cases, but nice to have.) The 1.14.x branch adds virtual memory for CPUs > 68020, and multi-user security features. I don't use VM, so I can't vouch for its stability. Everything else has run rock-solid on my TT for years.

FreeMiNT 1.14.7 has a few known bugs; the most annoying one is that TT-compatible systems "lose" TT-RAM on warm reboots. IIRC the other bugs manifest themselves only when you turn on the (still experimental) security features.

Oh, and just to stay more or less on topic... what about the Motorola Cold Fire series of CPU, as the centerpiece of a tight little TOS-compatible home computer? It may not be a speed demon, but it offers a lot of on-chip peripherals and good 68k compatibility. Anyone with knowledgeable opinions?

Yves

I sometimes use two DMA->SCSI adaptors on my MegaST: one GEsoft one which I built in to the Lighthouse tower, and another one (name escapes me :[) from the DMA pass-through of the GEsoft to a SCSI EZdrive. Works fine provided I give them different SCSI IDs (0 and 1 respectively).

Um, you *have* given your two SCSI units different IDs, I assume? 8-0

Zipsplit by Remi Villatel is now uploaded to ftp.funet.fi
(zipsplit.zip).

This nice little tool can extract files from corrupted zip archives.
For more convenient usage, rename the *.prg files to *.tos as they
don't support gem.
(Maybe someone could do a gem-shell for them...?)

Hmmm ... with a bit of rewording, this would be a
GREAT suggestion to Wizztronics, i.e. adding direct
support for these protocols.

If you wish, I'll submit it, crediting you with the
suggestion.

IIRC, the ACSI port uses device IDs 0-7, while the
SCSI port uses device IDs 8-15 remapped to look like
0-7.

If it WAS possible to fully use all the available
device IDs, and it looks like it's possible according
to the documentation for the XBIOS call DMAread(), you
could certainly hang a LOT of devices onto your machine
using the two interfaces!

Hi All.

I am having to sell my atari hardware:-

Atari 520STFM upgraded to 1MB ram & Autoswitch Overscan
Alpha Data Hand Scanner with Touch Up Software
Star LC20 Dotmatrix Printer
MONO VGA monitor for ST Hi res mode

Software includes:-

Protext V6 (lates version 6.5 iirc)
Touch Up Software
Frontier:- Elite II
+Other games 7 software

Plus 80+atari magazines & coverdisks!

The whole lot for 180UKP

Tel 0131 443 4226 (Edinburgh) or E-Mail

2248. Advice needed for a database program

Newsgroup: comp.sys.atari.st
Date: 1998-04-30 00:00:00 UTC
From: prajoux@REMOVE_THIS.laas.fr
Message-ID: <6iaa1u$367$1@laas.laas.fr>
Source record: 101855

Hi, fellow atarians,

I need to install a database management program on my Atari.
I would like to hear from you advices about which one you would recommend.

I do not need a complicated one. Basic capabilities are sufficient, but if
it can do more, fine ;-)

What is mandatory for me is:
- It must be GEM-friendly, because I run a Nova card.
- It must be well documented.
- If commercial (I would prefer that), it must be available through serious
dealers.

Thank you in advance.

Roland
prajoux@laas.fr

>One of them is working!

Sorry for taking so long to jump in here. I missed a lot of the discussion
due to the misleading subject line. :(

The ALIAS file handling was a quick and dirty feature I added for NOS/Oasis1
users. At the time I didn't know Okami and hence didn't really think that
many people would use the NOS format. That's my excuse anyway :)

POPwatch looks for the ALIAS file in the retrieval path directory - 2.
eg. If you've set POPwatch's retrieval path to:
E:\OASIS\SPOOL\INCOMING\
Then POPwatch will look for the ALIAS file in
E:\OASIS\
If you don't have enough directories ie. E:\SPOOL\ or E:\SPOOL\INCOMING
then it will look in E:\

Like I said, it was designed with NOS in mind and as such I have assumed
certain directory structures that probably aren't really applicable to

Okami. I need to rethink it all.
Any suggestions from Okami users would be most welcome. Either email them to me or discuss them in here, but please make sure the Subject: is appropriate. I don't read *every* usenet article on the off chance it's relevant to me.

>This is a nice feature that is hidden away in the docs and then
>explained in a rather obscure manner. Too bad. >

I hope I've managed to excuse myself for that :)
I'll change the docs in the next release.

Regards,
Gary

That's correct (although I didn't know they'd been offered up for approval).
Demon's server has a new command called *ENV which retrieve's the original
SMTP envelope for the email. Using normal POP3 servers it is not possible to
access this envelope and it get's lost. This is a shame because the SMTP
envelope contains information that was present when the email was originally
sent. such as the RCPT TO<> address. Even emails that are sent to a huge
list of people in the To: field of the email, *must* list each recipient in
turn to the SMTP server when sending it. Thus it *is* uniquely addressed to
each individual. Thus being able to access the SMTP envelope means that
POPwatch can determine who the email is *really* for and not rely on the
flaky To: field. I hope this clarifies things a bit :)

No. This won't work. Not with POPwatch at least. It would simply store any
emails for *@yourhost in rosco. You probably don't get many emails addressed
to * :)

POPwatch doesn't support the use of "default username" (yet). At present it
will just map emails actually addressed to default@ which isn't what should
happen. I think. TBH I didn't give the use of "default" much thought.
Maybe I need to trawl through the NOS docs and work out exactly how it
should work.

My guess would be that if it doesn't find the email address in the alias
file it should be stored as the name specified as default?

>--
>.

Yep I know it should be possible, I still can't do it though. Even with the purchase of another adpator (ICD Link) I still can't get both devices talking to the computer at the same time. I either can have the hard drive or the cd-rom drive, depending on what adaptor I use.

And yes they both have different ID's, and have been tried with and without terminators and with 3 or is it 4 hard drive drivers and I think 3 cd-rom drivers.

As I have 2 adpators, and I'm getting a little #$&&***#, erm! fed up, this seem a logical question.

Cheers! for now
Steve

I don't think anything needs to be changed except the docs to explain how to use the ALIAS file. The retrieval path directory - 2 is a bit obscure, and I wouldn't have come across it if I didn't duplicate the ALIAS file everywhere imaginable. For Okami and NOS, the mail goes in \NOS\SPOOL\MAIL\ so its a simple matter to put the ALIAS file in the \NOS\ directory.

What is the need for "default deliver" on the first line?

I use both POPWATCH and NEWSWATCH on a daily basis with Okami, and I'm very happy with all these programs.

Thanks Gary.

2261. Dialer's window position

Newsgroup: comp.sys.atari.st
Date: 1998-04-30 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <893964080.7332.0.rover.c3adfca1@news.demon.nl>
Source record: 101868

Hi Peter,

just wondering: would it be a lot of work to include saving the Dialer's window position in the config file?
Reason is: my standard set up is a 832x608 screen under MagiC/Thing. I use a "group" in Thing for the Internet, the open position of this group window is in the upper right corner. When I open the Dialer, its standard position is at the screencenter, I usually move it to bottom-right. Newsies windows are all left aligned, so is CAB's window. Thus I can close a connection without moving around all kinds of windows or fiddling with the MagiC menu to get to the Dialer to top its window first; simply two clicks on "disconnect" (first one to activate the window, second to disconnect... OK, and a 3rd one to confirm the dialog...).

If this would be fairly easy to implement, I'd greatly appreciate it....

Check your timeout values, I use about 20 seconds for Last Char and 30
seconds for Max Timeout. Sometimes there can be malformed emails, but
that is pretty rare...

No limits. Bigger files just take longer. Just how big is your FAQ?
I personally avoid emails longer than 100k if possible, but I know
NEWSie can send them.

>What is the need for "default deliver" on the first line?

If POPwatch made use of this line, it would be one way round the "lost mail" problem. You said most of your list mail ended up in tesl-l.txt prior to getting the alias to work but you had the odd mail which ended up elsewhere as the first address in the To: line was another list member (if I understood your problem correctly). If the default line worked as with NOS, then if you started the alias file with "default rosco", all your mail would end up in rosco.txt with the exception of any explicit alias lines, so you would never get lost mail in other .txt files. OTOH this could be achieved by having sorting switchable in POPwatch's configs, though the end result wouldn't be quite as flexible.

>I use both POPWATCH and NEWSWATCH on a daily basis with Okami, and I'm
>very happy with all these programs.

Ditto, though I have a couple of wishes:

1 I would love a kill file for NEWSwatch.

2 POPwatch's kill file doesn't always do what you think it will with killing on a To: pattern. For instance I kill all mail addressed to news@whalley.demon.co.uk - I only use this username for news to avoid automated spam (see sig for how to send personal mail to me successfully). However POPwatch doesn't always kill such spam automatically where the To: line contains something other than my news address and the real delivery address is being determined by the envelope (this is a Demon specific problem - see previous posts regarding Demon's POP3 extensions). It would be nice if it picked up To: patterns using the envelope as well as the actual To: line.

Cheers,
John

Actually, this is sometimes handy as if you reconnect fairly quickly
(NEWSwatch does time out eventually) it will usually continue
downloading from where it was before the line was dropped. However,
this may not work for you as according to a discussion in here some
time ago this is ISP dependant and also relies on you having a fixed
IP address rather than one randomly assigned at login.

r> Please stand up and take a bow :-)

Yes, the only reason I haven't credited him is because I'm not sure it's appropriate for me to do so.

r> And then please add folders, multiple selections, and long
r> filenames :-)))))))))))))))

It already handles long filenames, at least MagiC VFAT long filenames.

I've found that it works on folder names, provided the folder is empty, but not if there is something in the folder. (You were probably talking about doing all the filenames in a folder, anyway.)

I don't know what you can do with NEWSie, but you should be able to remove
the mail yourself with POPwatch. A simple Control-A to select all files,
followed by Delete will delete all the mail in your server's mail box.

Here's the web site for POPwatch: http://www.the-gap.demon.co.uk/

>.ICO files separately from some Atari site and they won't be converted
>with it :-(

It seems there are different ICO formats indeed. I just tried
ICONEDI.APP. ICO's created with this prg can't be loaded into
ICO2RSC. Also _Look 'n see_ is able to load ICO's coming from the
ICO2RSC package but not those created by ICONEDI.APP.
So my guess is that ICONEDI.APP creates a slightly different ICO
format then ICO2RSC.
>
>I also have problems with some .NIC icons I downloaded separately. These

>I could build up a collection of several icons and finally save them as
>a .RSC file.
>
>Any ideas?

Can it be that there are also differents NIC formats? I believe that
Neodesk 4 NIC's has another format then Neodesk 3 NIC's. Neodesk 3
NIC's can be loaded into Iconjuggler without problem but I can't do
this with the Neodesk 4 NIC's.

2272. Diamond Edge Upgrade Patch DE204PAT.ZIP

Newsgroup: comp.sys.atari.st
Date: 1998-04-30 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <6iam49oik1@irk.zetnet.co.uk>
Source record: 101879

Hi everbody,
Following a recent thread I decided to upgrade my DE v2
using DE204PAT.ZIP from ftp.lip6.fr. On running the patch prg. and putting
in my serial no. and password a dialogue came up saying it couldn't upgrade
the prg. as it was squished 'Try unsquishing it'

I haven't the faintest idea what this means, can anyone help?

The read me file that came with the patch was as follows :-

Diamond Edge Version 2.04 Patch
October 3, 1985

This program will patch Diamond Edge 2 V2.00, 2.01,
2.02, or 2.03 to version 2.04. It will also patch
Diamond Mirror V2.0 to V2.1. Place DE2PATCH.PRG,
DE203PAT.DAT, and DM21PAT.DAT in your EDGE directory
and double click on DE2PATCH.PRG to apply the patch.

All Diamond Edge 2 owners should apply this patch.

The files I downloaded with this readme were

DE204PAT.PRG - Slight discrepancy with the patch prg.
DE203PAT.DAT
DM21PAT.DAT

All replies appreciated - thanks
Mike

So, if I understand correctly, it should work in I:\ as I retrieve in
I:\OKAMI\MAIL

Fine as I was trying in different places step by step with no result so
far.

> *Any suggestions from Okami users would be most welcome*. Either email them

Nothing special come in my mind. Okami let you specify almost all the
folders/files needed in it's config file.

What I would apreciate is that POPwatch (and mostly NEWSwatch) could "see"
if the modem (or the link) has been disconnected (usualy by the ISP). Or
is it something for STinG or HS-Modem ?

Bye,
/Pascal/

Not sure why not, but I've got a function that does the same. It was a case
of look at each character in turn and use a look-up table to convert an
upper-case letter to lower. Not pretty, or fast in basic, but do-able.

> I'm not sure that GFA will even _handle_ long file names.

GFA _will_ handle long filenames, in a way, but only if you tell it to.
All it needs is ~GEMDOS(281,1) at the start of the program and, if their
available, they're used. If you only want to use them with the fileselector,
this is quite sufficient. If you are using FSFIRST/FSNEXT, you need to write
the LFN equivalent. These are Popendir(), Preaddir(), Prewinddir() and
Pclosedir().

As yet I haven't been able to get these to work, nor have I been able to
find any useful docs for Mint, which would help. Whenever I try I get bombs, which
isn't very useful.

>I'm tried sting and that in the past and couldn't get on with them I
>was hoping something better and easier to install had turned up. Oh
>well how about HTML authoring?

STinG is by far the best compromise between ease of installation and features, IMHO. STiK is slightly easier but SLIP only and has no servers available, MiNTnet requires MiNT and a whole lot of Unix experience to appear easy to use. NOS is only simple if your ISP provides a setup almost ready to run, otherwise can be as obscure as MiNTnet. STinG is becoming easier to install with each release as the docs are getting better and the author is moving most of the dial-up stuff into the dialer so you do most of the setup in one place.

As for HTML authoring, take your pick between an OLGA/AV aware text editor used in conjunction with CAB and a good set of HTML shortcuts or more dedicated HTML editors and tools such as Homepage Penguin, Webspinner, Joe, Tabi, HTML-help, etc etc. Take a look at the Ultimate TOS Software Index for a few pointers:

Well, *if I understood the docs correctly* (this was the main doc file
for PC NOS on Demon's FTP server), that's correct. The default line
seems to define what happens if no alias line is defined for the user
in the message. "default deliver" just tells it to deliver to the
username in the message with no rerouting. "default username" tells it
to default to username in the absence of a matching alias line.

: black and white :(to accomodate high rez.....and basically look very
: sad.... but work :)

I don't know about other people, but I would prefer a program that doesn't look nice that I can use, rather than a nice-looking program that is useless because I can't use it at all. I don't understand what making it black and white has to do with supporting high resolutions though.

Of course you could even make it work on any Atari machine (without having to reboot, switch monitors etc., which makes using the program more trouble than it's worth) AND make it look nice, that is the best of both A and B. Wouldn't that be the best option?

>or a valid serial number.

It's sad that people are actively sinking the ship even though there are so few developers left.
Piracy is what's always been one of Ataris biggest enemies and people saying anything else are wrong. On a huge market like the one for PC programs, the piracy damages to some extent, but on such a small market as the Atari community, it's catastrophic. When PC developers sell thousands of programs, several thousand are copied as well (but the development costs are covered anyway). When an Atari developer sells maybe 100 programs and they're copied to several hundred other users, there simply is no market left for the originals. In the long run, noone can develop programs for several hundred hours to give them away for free, so the development disappears on the platform because of the piracy.
If you feel that the software you want is too expensive, you simply don't need it enough!
Buy the software you use - otherwise we'll end up without ANY commercial developers for our beloved Ataris!
Don't forget to register your shareware programs - many people believe that shareware is for free, but it's not! The shareware programmers might also stop developing if they don't get enough money for the time they spend writing software.

Enough said!

>all the hard drive is 4 years old, and never had a cd-rom attached to
>it until now.

The following mess works fine for me.

```
MSTe (with internal adapter for hard drive)
|
DMA/ASCI port
|
SupraDrive ---------------- Supra SCSI port
| |
Supra DMA/ASCI port Syquest ezFlyer
|
Supercharger
|
Supercharger DMA/ASCI Port
|
Link 97
|
CD Rom
```

For those puzzled, I had to buy the Link 97 because the CD rom won't
run of the Supra SCSI adapter even though the Syquest will. The Supra
has only a DMA input, as does the Supercharger, so they have to come
before the Link 97.

So there is something that uses the serial number. Now the question becomes
'Does TOS use the serial numbers, or are they just there for other programs
to use?'

> The cause was FCOPY3's writing of the same serial number to all disks.
>
> Is it really true that MGFORMAT doesn't set random serial numbers?!

No, MGFORMAT DOES set random numbers. It seems to write the boot sector
so it is DOS 5.0+ compatable, ie. it puts the volume name and FAT bit-size
into the boot sector, along with the "MSDOS" flag.

What I said was, I use Kobold for the formatting, and I have no problems
with those discs. This is even when the numbers are the same, and makes
no difference as to which OS they are used with. The only thing I have
noticed if Win95 replaces the "KOBOLD" with "(", a 32 bit (4 character)
serial number and "IHC". In other words, Windows will give any disc it
writes to an identical serial number, as far as TOS is concerned, while
removing any "MSDOS" flag.

Unic is a file maintaince app from Katherine Ellis for MiNT
partitions. The Icons didn't display properly in 24bit mode so it
didn't look as pretty as it does at 32K colors.

I'm sure you're right, but I don't understand why. Many things are
copyrighted but even in the most restrictive cases licences are permitted for
reading the format and doing something with it, like conerting it to
something else...

Strange it hasn't been discussed anywhere in that case. maye i missed it
when I was offline in December/January/February...

Or perhaps it's because TOS is now an irreleance unless it has uilt in
support for AV, VA, SE, OLGA, UFSL, XFSL, XACC, GEMScript and any and every
other protocol that's been recently defined in the asence of any leadership
from the owners of TOS...

d> no sign of it checking a serial number. The code here appears to be
d> the same in TOS 1.62, a disc loaded TOS 1.00 and in Magic 5.

I don't know where it is done (and I'm not a programmer), but I believe
TOS looks at the serial number when asked to display or even access a
directory: If the number is the same it reads it from a cache (to speed
things up); if different, it re-reads the disk. Problems arise when you
change disks and they have the same serial number. TOS doesn't
necessarily detect the disk change (depending on the particular type of
drive fitted) and thinks it's dealing with the old directory structure;
when tyhe next write access is made it is likely to trash the disk - both
the directory and one or more files are likely to be overwritten, at
least partly.

d> I'm glad to say it hasn't done anything like that to me, not yet
d> anyway. A couple of things I've noticed about KnifeST is that it

d> partitions with more than 32767 sectors. 'Tis a pity since it's a
d> nice disc editor.

I agree, it's fine with floppies and hard disks with 1k clusters but I
can't trust it on larger partitions. Even doing a check it reports all
sorts of errors that aren't really there; I'm not sure it really likes
or understands properly 16-bit FATs.

Regards
/Peter/

Wotcha psmith@zip.com.au!

p> Organization: The Zipsters
p>
p> My Atari ST is still used every day in my business.

Nice to know someone hasn't gone PC and is still using STs in a business environment.

p> I have programmed a nice database out of Superbase.
p> I have a series of Auto-folder programs (LGSelect,QuickST,
p> Cache, RamBuffer, etc) which make things a bit easier, but

All of these have been superseded by much better programs, ie Twist (database), Freedom (fileselector), NVDI (system accelerator), HD Driver (HD utilities) etc.

p> this Magic OS sounds interesting ...
p>
p> What is it like, what can it do, and where can i get it ?

Well its brilliant. It gives you full pre-emptive multitasking, and even makes the machine run faster (by a few percent) than TOS!!

I don't know about Australia, but here in the UK, we have an Atari dealer called System Solutions, who can provide all of the mentioned software.

They have a website on

http://www.system-solutions.co.uk/cafe

or you can email them on

sales@system-solutions.co.uk

If you don't have full email access you can phone them on

I think that v1.09 of Thing is not compatible with Geneva. I have had this problem with running these two programs together on my Falcon, it just bombs out (although it works fine on my Hades?!). The new version of Thing, v1.20 is supposed to work fine with Geneva.

You can obtain the German version of Thing v1.20 (English version on way) from the Interactive WEB Site:

http://www.cix.co.uk/~inactive

Hope this helps.

Regards,

Ben Hills.

But it is possible though. For example when using to Megafile 44 drives
(no sense in it, OK, but no problems with it).
But it remains one SCSI system, so you are still limited to 8 devices.

Hi!

Please don't be so formal. I perfectly know that this is an English
speaking newsgroup. I just though that this description of the Atari
plug for video might be of some interest to someone. So I forwarded it.
And surely it was understandable for someone interested, even if not in
English. If you're not interested in it, then just don't look at it, and
everything will be OK.
I just wanted to share this help and I surely wouldn't have translated
it just because of this English-speaking matter.

I hope I made my point because an attitude such as yours will result in
the leaving of many foreign participants in this group, which is the
biggest for Atari and so the most proffitable for everyone's personal
experience.

Bye,
Yves.

No, surely not. This is not a MagiC-related problem. I'm going to check
this. How long does it take before the error message appears when you
access a parked drive?

Basically this should be possible but you won't gain anything. A single
adapter is sufficient to address all the devices.

Why would you want to do this?

Most adapters will run up to 7 SCSI devices. The funny one is the aDSCSI+ which has its clock assigned as ID 6 so you would not be able to use this ID for a normal device. Just make yourself a new 50-way bus cable with 2 (or more) connectors and ensure that the devices on line have unique IDs. This is the beauty of SCSI!!

Hmm so you are saying that I should not post in the 'for sale'
newsgroups, demon.adverts and uk.adverts.computer? Why are people in
those newsgroups if not to see what is up for sale? Time and again I
see the same postings from the same people in the same newsgroups
about stuff they are selling - not on a weekly basis - but a daily
basis - and with different subject headings? I only repost once a week
and within the same thread! And my repostings are generally smaller.

This way (posting being in the same thread), people can ignore it and
not download it.

>access a parked drive?

The drive spins up Ok, but a while after that it seems like the system knows the drive is ready but can't read from the drive. I don't know how long that is, but it should be about 15-30 seconds. It might be some timeout and me having a slow HD, but that also seems improbable. Thanks for looking at it. Coming to think of another thing, when I boot my Falcon there's a big pause before the driver loads, that's because of Falcn is looking for IDE drives and that can be fixed, right? But when you start MagiC and it does this reboot to load, what is it looking for? It takes forever before it starts the HD driver again!

Then I also want to thank you for making HDDriver, it's great!

Greetings,

I have the older style 4meg TT-FastRam board (CA400312) with three
jumpers, and am interested in upgrading it so that I can used 16meg
instead of 4. I am wondering if anyone has successfully modified their
board using the instructions found at :

http://www.megacom.net/~q-funk/TT030/upgrade.htm

The documentation seems to indicate that this is an untested modification.

Any help would be greatly appreciated!

This is true for all but a couple of cheapo adapters which were either internal or came inside a shoe box. I think these are limited to IDs 0 and 1 only.

>My SCSI hard drive has two ports, and I think you
>can just run a cable out of the second port to the next device, and

Yup. Even if you have only one port to go at you could make-up a new SCSI cable with in-line connectors at the right places.

>some kind of a setting I need to check?

Yes, I used to get this. Rarely (about 5%) but it's a nuisance. I'm trying to remember how I fixed it .... ummmm

I think it turned out to be a problem with the comms. layers rather than Newsie. Newsie was being sent some duff characters which it interpreted as 'End of Message' and, at other times interpreted a corrupt 'EOM' as something else.

Have a careful look at bits of your comms system. You could try:

Check your modem settings in SERIAL.CPX. You have RTS/CTS do you? How about the DTE rate? See if the problem goes away if you set it one notch lower.

Check HSMODEM settings. Are your buffers 2K-4K? All other flags as recommended? What do you use - DRIVIN + MFP?

Have faith - since I fixed it the problem has not re-occurred.

2319. BIGDOS in use...

Newsgroup: comp.sys.atari.st
Date: 1998-05-01 00:00:00 UTC
From: chrisc@zetnet.co.uk
Message-ID: <6id9uqseq1@irk.zetnet.co.uk>
Source record: 101696

Hi Folks,
I've just fitted a 2Gb hard drive to my Falcon and I'm having problenms with it. I'm using CBHD as a driver, although I had a similar problem with HDDRIVER 6 as well when I tried this using someone elses copy as a test. My Falcon has TOS4.04 I need to format this drive to roughly three equal partitions of about 680Mb, one to act as an image drive for CD recording, one to assemble the tracks for my own recordings to CD with and one for 8-track D2D. The drive formats and partitions OK, but I can't access the partitions. When I re-partition to 5 x 400Mb partitions I'm OK, and the machine is happy to access them.
I thought BIGDOS was supposed to cure this, but I can't seem to get it running properly, it asks you a question about <<media>>, and no matter waht the answer you gove it'll hang at that point.
Any help or advice on another tack to take most welcome.....it's very frustration to have 2Gb's of space and not be able to get it to work properly....

Many thanks

chrisc

This was discussed some time ago and Peter was looking into the problem.
With STiK I have no delay sending mail - with STinG, there is about a 30
second delay before the STinG connects with my mail server. OTOH with my
newsfeed STinG makes a connection 99.8% of the time on the first try.
With STiK I might have to make two or three attempts via Newsie before
the news articles start to download.

AFAIK Extendos Pro Gold is only going to handle CD audio, and not data, at least in the early release. If you need to do data then Soundpools CDRecorder Pro is the package to use. I've got it and it's a doddle to use despite the odd minor hassle with iso9660 illegal name structures...

It costs less if you buy it direct from Soundpool, they've got English manuals, and it's very easy to follow.
I use it with a Yamaha CDR200tx 2x write, 6x read unit and it's not failed a disc yet...

> here).

That _would_ take a lot of time.

If Hallvard feels industrious, he could do screengrabs of the NIC files while in the NeoDesk demo. What NeoDesk sends to the clipboard is an X-IMG file anyway. These screengrabs can be done, let's say, in 640x480, then the icons manually clipped to 32x32 pixels in a program like GrafTool (which saves in X-IMG format). Two big screengrabs would have to be done for each NIC screen: one in monochrome and the other in color. So long as all the clipped 32x32 X-IMG files are saved in the proper screen depth (1- or 4-bit), the conversions to RSC format should be fine. This would save you time, Martin ;-). And it would allow Hallvard access to the newer NIC files at any time.

Actually, I was referring to whether or not any company had picked up the Parx
products for _sale_. I'm pretty sure they would have copyrighted their work,
but I hope they will let me buy it somewhere.

2330. FS: Atari ST Gear (2/5/98) Update

Newsgroup: comp.sys.atari.st
Date: 1998-05-01 00:00:00 UTC
From: steve@steverosie.demon.co.uk
Message-ID: <894066215.14357.0.nnrp-04.c1ed1184@news.demon.co.uk>
Source record: 101707
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,uk.adverts.computer,demon.adverts,netcom.uk.forsale,uk.adverts.other

I have a selection of Atari ST titles for sale.

This List Updated 2/5/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 5
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins
and Space Harrier (20 levels)
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'
Atari 520STE Discovery Xtra Pack 5
Language Disk DE1 (ds)
Final Fight Disks DE2 & DE3 (ds)
Sim City/Escape from the Planet of the Robot Monsters (ds)
9 Lives (ds)

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 2
Superleague Soccer (1d,ss) 2

> Question: Why if GEM sucks, are you still with atari? Why have you
> ever been with atari?

Because you can run Linux/m68k on the Atari.

> Other system might have been better for you,
> what do you think about coding for W95 only or OS/2 or Macos, are they
> nicer? better looking? You think you could cope these OS? when you
> can't program for GEM (as simple it is)(I say "can't" in the way that
> it is either personal knowledge of a GUI, or the tools you are using
> not allowing an easy control of GEM).

It isn't a matter of wanting to program for GEM, it is a matter of "What's
the point". The newer Atari clones are rather expensive in contrast of
PCs which can run BeOS, OS/2, Windoze, NeXTSTEP, UNIX, and Linux.

The MacOS and Windoze are easy to code for as there is support. There
isn't a lot of support for coding on OS/2. For OS/2 there's a conversion
program to convert Win32 binaries like Quake II to OS/2 PM binaries.
There's also XFree86 and UNIX libraries for porting GNU and X/Windows
applications. As for the MacOS, there is another "What's the point".
Many Mac developers are moving to either Rhapsody, BeOS, or WindowsNT/95.
I think the best bet is to code for Java, tcl/tk, or gtk environments and
porting these environments to Atari is the need merits. For
commercial/shareware developers, the MacOS and Win32 are the most
profitable channels.

> I really can't understand why someone (game maker here) stick with
> atari. I really can't. An ST, no harddrive, no g.card, low ram, is not
> that all exiting. And I (once again) understand why you got a pc. (all
> flashy).

They must be fanatical about Atari. Who cares, everyone has there love,
why question it.

[snip]

> What the people (emmanuel curris and other) complain about is that a
> program coded in 1998, really with all the knowledge we have, with all
> the tools, the new hardware etc , Really shouldn't limit a program to
> run on ST med only. That's against every concept of programing, even

Programming for an ST is rather silly unless it is some very very
specialized function like home security or something.

[snip]

> playability are main factor in games. Hades or TT users know from the

> me>If you dislike GEM, you must surely hate Windows. So what do you use on
> me>your PC? GEOS?

GEOS or GeoWorks didn't support developers or a good development system. They charged for their development kits. They screwed themselves big time. I always imagined a "What if GeoWorks was successful" and "What if GeoWorks was the new OS for Ataris". But we'll never know.

> to choose the colours, and there's no neat stuff like colour cycling.)

DOS supports 256 colors through VGA and has VESA libraries to support higher resolutions. DOS supports various graphical packages like MicroPM (miniture OS2 Presentation Manager API), svgalib, turbovision clones, etc. Theres 32bit DOS extenders and even one that includes threading. There's OpenGL support and support for 3Dfx hardware acceleration. There's sound hardware support via SoundBlaster or third party sound libraries. There's development environments and support from DJGPP which is a port of GNU tools and libraries.

Many graphical web browsers exist for DOS as well and this July there'll be a JavaVM for DOS from Sun Microsystem.

I don't think GEM has these. Anyways, I have a URL with some of these treats at:

http://shell4.ba.best.com/~darknerd/realmspace/rsdos.htm

It's pretty sad situation.

Aloha,

I am running Cubase Score on a MegaST.
Steinberg no longer sells the ST Cubase modules:

Studio.MOD
StyleTRAX.MOD
CueTRAX.MOD

Can someone help me out in getting these modules.

Greg Malick,
Honolulu, HI

>
>http://www.megacom.net/~q-funk/TT030/upgrade.htm

I've upgraded my TT to 16 megs using the information at the site you mentioned.
My upgrade board had 6 jumpers; all I had to do is buy the ram and change
the jumper settings. The 3 jumper board requires a lot of modification for it
to work; someone with electronics experience.

Well the problem here is that when you load the modules the first time they look towards the floppy drive for the original disk. The original disks have something written to the boot sector or something.

One can download the modules from their ftp site.

Terry May wrote:

> You can automate that process with a good boot manager such as Stoop (Falcon
> only) or Super Boot.

I do use Stoop, it's not the problem. And you know what ? I run the Falcon
with both STinG and Sockets at boot up with no problem :-)

What I meant is that I have to diconnect from one to reconnect with the
other to get the features that one have and not the other and "lycï¿½e de
Versailles" (as we sometimes say for "vice versa" :-))

(btw, it seems I have less problems with IConnect for the modules)

Bye,
/Pascal/

Hello Alyre,

Once in a while I'll have an email that Newsie can't delete. I have managed to delete it using Antmail. Click on "check mail", then click on the "delete" box next to the mail you want to get rid of. I'm guessing that Newsie and Antmail have different ways of handling the delete function. But then, it might be something to do with your server. Seems silly to have to go to the bother to set up another program just to delete some email. Anyway, it works for me, so it's worth a try. Maybe someone else will have other suggestions.

Good luck,

Will Linux work with a TT030 and a NOVA card? Do NOVA drivers exist
for Linux? Obviously, Linux can't use the TOS drivers that come with
the NOVA card. I was thinking about setting Linux up to run off my
zip drive, but wasn't quite sure how this setup would work.

Yo Dennis,

Well, I don't think you have a NEWSie problem, necessarily. It sounds like STinG is dropping some packets which will cause all kinds of problems.

In the STinG Dialer(Statistics) check to see how many dropped packets your getting after an online usage. Check Modem 1 or 2 that your using. You mentioned before you had trouble sending large files with NEWSie. I've sent/received 2meg binaries with no problems. Your might try sending yourself 4 or 5 test messages to see what's what. Your Mail Box may have been corrupted.

I would upgrade to NEWSie v0.88 also. "EoF from Remote" can mean that you lost your news group feed, so you have to re-connect NEWSie to you host. It doesn't mean that STinG dropped your connection. Just re-connect NEWSie.

My best guess is that you don't have STinG optimized for your ISP.

CU,

Charles

Hi,

I have found that most GEM dialogs (alerts, stop!, etc.) do not
display properly (colors) from 24bit mode on the NOVA (including UNiC).
There is no problem in 15 or 16bit mode however, except from TOS 4.0X
icons, which do not apear with their normal color (this is stated in
the NOVA English manual).

I was lucky to get through as I called early. They stopped answering
the trouble line three hours before closing time:). I had to figure
out the PAP thing by myself (and I'm pretty stupid about those
things:).
The real pisser was, as I told you earlier, I dropped IWV as of the
first, so I was sweeting it out if I was going to have access for a while...
On the positive side, things speed up nicely. Hurray for progress.

Mike

Yes, that's correct. Also MidiCom had Romport interfaces to handle
the transfer by 170Kb/Sec. But that's only for Atari <> Atari.

>Is this correct? Is MidiCOM FD or commercial

It is commercial. Also the Romport interfaces..
You can use the normal midi leads, that's the cheapest way. (But slow)

Few month ago harald tell me that he had some drivers to connect
other computers over a serial link to atari machines.

Regards, Robert

All this seems to point to either a termination or TERMPWR problem IMO, try setting both the CDROM and the hard drive to supply the latter. With your Link 2 host adaptor it doesn't matter whether parity is on or off but I suppose settings should be the same over both.

Try the chain suggested by SysSol, but make sure that the CDROM has its termination off (which might be set by a DIP switch at the rear of the mech.)

>retrieving mail, I get a dialog box saying "an unexpected error has
>occured". It says "-00003 EOF from received from a remote host". What
>could be causing this?

This sounds like the problem that was caused by a bug in STinG.
Two solutions are available:
1. Get the latest POPwatch from my web site (2.52)
2. Get the latest STinG modules etc. from Peter's site.

The bug is actually in STinG, thus getting the latest version of that is the
real solution. The latest POPwatch actually has a workaround which hides the
problem though.

Of unknown originm but.....

Imagine if instead of cryptic, geeky text strings, your computer
produced error messages in haiku...they would read like these:

A file that big?
It might be very useful.
But now it is gone.

- - - - - - - - - - -

The Web site you seek
cannot be located but
endless others exist

- - - - - - - - - - -

Chaos reigns within.
Reflect, repent, and reboot.
Order shall return.

- - - - - - - - - - -

ABORTED effort:
Close all that you have.
You ask far too much.

- - - - - - - - - - -

First snow, then silence.
This thousand dollar screen dies
so beautifully.

- - - - - - - - - - -

With searching comes loss
and the presence of absence:
"My Novel" not found.

- - - - - - - - - - -

The Tao that is seen
Is not the true Tao, until
You bring fresh toner.

- - - - - - - - - - -

Serious error.
All shortcuts have disappeared.
Screen. Mind. Both are blank.

****

And now for the question of the day - is your computer male or female? You decide! As you are aware, ships have long been characterised as being female (e.g."steady as she goes" or "she's listing to starboard Captain!").

Recently, a group of computer scientists (all male) announced that computers should also be referred to as female. Their reasons for drawing this conclusion follow:

Five Reasons to believe Computers are Female

1. No one but the Creator understands their internal logic.

2. The native language they use to communicate with other computers is incomprehensible to everyone else.

3. The message "Bad command or file name" is about as informative as "if you don't know why I'm mad at you, then I'm certainly not going to tell you"

4. Even your smallest mistakes are stored in long-term memory for later retrieval.

5. As soon as you make a commitment to one, you find yourself spending half your paycheck on accessories for it.

However, another group of computer scientists (all female) think that computers should be referred to as male. Their reasons are as follows:

1. They have a lot of data, but are still clueless.

2. They are supposed to help you solve problems, but half the time they ARE the problem.

3. As soon as you commit to one, you realise that if you had waited a little longer you could have obtained a better model.

4. In order to get their attention, you have to turn them on.

5. Big power surges knock them out for the rest of the night.

I'm looking for a copy of Cubase that will run on my Atari 1040STFM

Thanks,
ryan
ud035@victoria.tc.ca

2355. Re: Damage by switching printer connection?

Newsgroup: comp.sys.atari.st
Date: 1998-05-01 00:00:00 UTC
From: john@JCordes.Phys.Dal.Ca
Message-ID: <6ic5drmbj1@News.Dal.Ca>
Source record: 101756
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Thanks for the various replies (including one by private email). All correspondents have suggested that it's probably ok to go ahead with the switching.

I tried it last night (computers on, printer off) and so far everything's okay.

John

MF> Did anyone ever figure out why there is a delay when sending mail
MF> with either Newsie or PopWatch under Sting?

It seems to be (at least partially) ISP-related. I just recently got a new ISP and now my mail goes out immediately. In fact, it goes out faster than my news articles. No delay whatsoever.

Hi "maz"

Atari Netherlands closed down several years ago...

There's more/better drivers for a SH204 than HDX... if you cannot manage to find them however, I'll have a look in my files, believe I (still) have copies of them.

I'd gladly reboot in ST med rez on my Falcon to run Tony's program. So count my vote! I know what you feel about rebooting to run some game. But how much are you paying for Webmaster? Put up or shut up as we say in the States.

> It would be interresting to see how many users use a none modified ST/TT/Falcon.
> Maybe it is 99% but I doubt it.

I'm one. I think the FPU should count as non-modified?

Atari Falcon, TOS4.04, FPU, no mods, no nothing.

Happy Festivus,
Dave

I've had STiK up and running on MagiCMac, it wasn't that hard to configure.

As for HTML editors, there are a few choices.
There is the idiot-proof Homepage Penguin, which lets you fill out some forms
to create a hpmepage automatically.
There is a new text-based HTML editor, the name of which I've forgotten, but
you can find it on Mille's page (http://surf.to/atari).
There is also QED, which together with OLGA, CAB and HTML K�rzel makes a
dynamic alternative.

Hi Peter

Well magic is probably the best and most used thing i have
ever bought (except my falcon) it is a pre-emptive
multitasking operating system (as stable as windows NT)

The up side of having magic is that all your gem based stuff
should (90% of) still works, although DSASE One doesn't work,
i'm not sure about super base.

Also and by far the best bit is that your programs will run much
faster (5 times) than normal as the OS is optimised in assembler,
It will run from floppy disk but you really need a hard disk, you
also really need 4mb of RAM on an ST and if you have a falcon
you will after a month or three be craving for 14mb.

Magic is very easy to get going but is sadly incompatible with
some really cool autos and accs like mouse ka mania but it
was well worth the 60.00 ukpounds that i paid for it!

If you have an ST then Magic will not look too good unless you
are in high resoultion on a monochrome monitor.

On the Falcon Magic looks cool and is 100% useable in all 640*480 or
greater resolutions.

One you use magic 5 you'll want every thing to run under it at once.

it can be bought from System Solutions in britian

01753 832212

i cant remember thier www url but it's quicker to phone anyway

approx price 65.00 ukpounds

On the one occasion it happened to me I had a mail queued up ready
to go and clicked on 'Get Mail' which I'm in the habbit of doing. Its
always seemed to work ok in the past, ie. it sends the queued mail
first then collects the new mail. COuld this be the cause of the
problem in my case? Or should I always click on 'Send Mail' first.

Hej Hallvard,

don't think the author issued english docs, but it's not all that difficult:

Get Liberty.prg into your autofolder. It's a library needed by Freedom (just
like this Magic thing for Stella...)
Then install Freedom as an ACC (root of C or where ever you keep them) and most
of the work is done.

What is the major difference between Freedom and Selectric: copying files,
select them, hit CTL-C, next define the drive/folder whereto and hit CTL-V. For
moving, it's CTL-X first and CTL-V after selecting the destination.
ALT-whatever selects your drive, etc. Has a nice "find" option (tho' Finder is
better/faster and can look into archives too, but hey, it's a fileselector...)
Major advantage: it won't block operations, being non-modal, support of long
filenames plus case-sensitive filenames, multiple-file-support. Major reasons
why I'm not wasting it. Also all kinda options to rename files whilst moving
them etc. Some call it a "Schweineprogramm", but I like pork meat every now and
then :-)))
Furthermore it acts as a Control Panel for CPX-es and the customizing options
are far out.

2385. Homepages

Newsgroup: comp.sys.atari.st
Date: 1998-05-01 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <894047881.3584.1.spot.c3adfca1@news.demon.nl>
Source record: 101786

Hi again,

since most of my problems have gone, I've got more time to explore the Internet... and a discovery voyage it is...

Tried to look into Martin-Eric Racine's homepage (seen this advertised in this NG not so long ago), but "file not found"??? Gone already???

Then I went to this U.T.S.I. site of Jo... Jo, it wasn't exactly what I hoped for (maybe I did something wrong; I was under the impression to find a BUNCH of programs listed in your monthly posting but maybe I got that wrong...) Anyway, the page is nice but on a Truecolor system I suggest you change the darkbrown and darkred text on a black background to something else just for readibility :-) or make the fontsize at least 3 or more :-) Heck, I'm glad this Matrixcard of mine can enlarge 2, 4 and 8 times by clicking some keys, but not all cards offer the feature...

It looks like homepages come and go and the problem is; everytime a HP is created you'll see a message "Go http://whatever.xxx" but you never see messages like "HP closed down again"... Is this especially true for Atari users or also for non-Atari users? I got to this Freedos page somewhere, it stated there's a mirror site down in Spain, but the mirror site said "click here to get to the ACTUAL site" and then after clicking I only got "file not found"...

I wish I was ITT, Bell Co. or one of the others :-)

Yep I noticed this too. You see the webmaster is a last year student
and for the moment his is studying very hard to get his graduate.
This reminds me that I must talk to him about the future of the
ftp-site.
That's why the incoming dir is rather chaotic right now. A week ago
I've ask him to create some order by transfering the archives to their
proper places. It seems he has found some time and removed some
archives from the incoming dir to their proper dir.
So fredm204.zip and boxkite is now in the */Utilities/File_Selectors* dir.

>and straight forward to use.
>
>(or am I missing some obvious things about "Freedom"?...)

With the older Freedom version (v1.15) which I'm still using
on my Hades one must do the configuration by editing a *ascii* file.
The latest version has however somekind of configuration prg. It's
much easier now but ofcourse with only German docs it remains
difficult for non-German speaking people. I've the luck that German
and my mothertongue, Flemish contains much similarities.

Selectric is still the most compatible FS but alas it's
lacking some modern things like supporting long file names, no color
support etc. Freedom 2.04 has all these and much more things on board.
But, yes there is a but, it does some dirty tricks to achieve his aim.
The German called it a "Schweineprogramme". In English something like
"swine program". In rare cases some prg's refuse to work with Freedom.
For instance digi_lab.prg doesn't like Freedom 2.04. It works but some
strange things happens, at least on my Hades.

>I've done this a lot, and it takes time -lots of it....

I don't know if the demo version will allow you to copy a Neodesk icon
into the clipboard. If it does then it's rather easy but time
consuming.
All you've to do is load a NIC file into Neodesk's Icon editor. Load a
icon into the editor and do a *copy to clipboard*. This will save a
snap of the icon into the clipboard. After you finished the job in the
editor run a resource editor like Interface or ORCS and convert the
picture into a icon. That's it. It takes lots of time but I'm afraid
this is the only way. I'm not sure but I think I got this solution
from Dan Wilga himself. So if he says so I think there no other way:-(
>
>IS anyone reading this able to help? Perhaps the full version of Neodesk
>has a feature the demo doesn't -so .NIC (and .ICO?) files can be saved
>as .RSC files? Does anyone here have Neodesk who I could send the icons
>
Sorry, no such feature in the full version.
If the demo version doesn't allow you to save the icons into the
clipboard please feel so free to send me the NIC file. I'll do the job
for you (not transfering into RSC however, too much time involved
here).

>questions for you, sorry if I've asked them before.
>The lead you are using to chain the 2 devices before, have you confirmed
>that it works/have you tried another one?

I've even split the cable and shortened it, incase that was the cause.
There is no problem, short etc. with the cable.

>Will each adapator and drive work OK on their own?

Each adaptor will run each device on it's own.

>Same as above but will they both work OK without any sort of external
>termination?

No, only with the translator adaptor. Termination is needed with use
withe the ICD Link II. The CD-ROM drive uses an external terminator,
the hard drive is internal, in-line resistor packs.

>Have you checked the DIP switches on them both and seen if parity is
>enabled?

Neither device has dip switches, the utilities that are supplied with
the ICD tells me that the Quantam 127 drive has no parity selected. On
the CD-ROM drive, which is a Sony mechanism, the jumper is open.

>With the Link and both drives turned on does the LED on the Link
>illuminate (assuming it's the Link2)?

Yep, certainly does:)

>You say that you have changed the SCSI ID, have you ensured that they
>have actually been changed (check with IDCHECK from ICD?), I had a drive
>from Gasteiner and the ID switch was so badly attatched that it would
>normally be ignored and the drive would reset to ID 0.

I'm sure as both devices are acknowledged on the ID check, and
Extendos acknowledges the cd-rom as 1. I have altered the ID's with
the same result.

2391. STiNG dialer info

Newsgroup: comp.sys.atari.st
Date: 1998-05-01 00:00:00 UTC
From: grovem@Blockridgenet.net
Message-ID: <6ibfa0$9oj$1@ash.ridgecrest.ca.us>
Source record: 101889

I haven't followed the STiNG threads, but I had an experience tonight that might help out some users if they are having problems with the dialer. This information may be in the manual as well, and I might have missed it.

My provider for the last couple of years just updated their modems to "digital" modems (whatever that means). During the conversion, they were forced to make some changes affecting the way I had to respond to the prompts and the way that PAP is handled (to the best of my understanding).

I found I couldn't log on and called the tech support. Firstly, in my dial script, I had to shorted the "find" words to just the last few (as recommended in PPPD kit for MiNT). The STiNG dialer then could log on, but I couldn't resolve any domains, but could ping the host. I have always had both PAP and a dial script included in my SCR file. As they said that PAP is supported differently now, I elimated the promt/reply part of the script and just used PAP.

Sorry if this is old news, but I was glad to see I didn't have to fire up the Mac after this update to the server:).

In the file ROUTE.TAB make sure there are true tabs in the route you
set. ie 0000(true tab)0000(true tab)Modem 1(true tab)0000. I had a
problem connecting until I looked at the route.tab file with a Disk
Editor and saw that when I made changes my editor did not save the
file with true tabs, it replaced the tabs with spaces.

I guess I should have said CD Writer (which is documented on Rogers
Web page). I'm sure CDRecorder is an excellent piece of software, but
dollars to donuts, Rogers version will cost less here in the States.

"With CD Writer you can create audio CDs that can be played back
on a standard audio CD player or on your CD-ROM drive. The CD
tracks are created from your own audio files (one file = one track).
CD Writer offers:

a modern interface for building your compilations of audio files
support for AVR, AIF, and WAV file formats
drag and drop feature for re-ordering, removing, cutting and pasting file entries inside
the compilation
simulation mode for testing before writing
printing of CD contents (track numbers, song names, times)
provision for extra pause length between tracks
up to 99 tracks and 74 minutes of audio can be written (the maximum that a CD audio can
hold)
support for HP, Philips, Yamaha, and SCSI3/MMC-compliant CD recorders
recording at 2x is possible even on 68000 systems!
to create audio CDs, you will need the following items in addition to CD Writer:

Atari or Atari-compatible, including:
Atari 1040 or Mega ST, with Link96 or Link97 host adapter
Atari Falcon030, TT030 or other Atari-compatible with SCSI interface
a compatible CD recorder device (see above for list)
blank CD-R (CD-Recordable) disks
a large hard disk drive to store your audio files before writing them
to a CD-R disk"

The best collection of Atari-specific web pages
is on the Atari WebRing (100+ entries at last
count).

You can access the ring from any WebRing member, such as
http://www.tmisnet.com/~strads/hq/atari.html#AtariRing

I tried deleting (Unsubscribing) from the newsgroups and then
over a 3 day time, re-subecibe to them, Newsie is still putting
messages from one group into the folders of others. Tonight,
not one message came into comp.sys.atari.st! why? Newsie had
filled that folder with postings from sci.astaro.amateur!!!
I don't understand why it does this!

2403. Slow Modem Speed

Newsgroup: comp.sys.atari.st
Date: 1998-05-02 00:00:00 UTC
From: bechler@midcoast.com
Message-ID: <6ieddp$qmv@news.agate.net>
Source record: 101727

Hi,
Has anyone out there experienced slow modem speed on a Falcon030 with Cab 2.5/Sting. I'm talking about no more than 350 bytes per second, which is about 1/10th of what other people get. I've tried everything short of checking the serial port. All the people I've talked or E-Mailed to, such as Systems for Tomorrow, Wizztronics, Peter Rottengatter and others have been helpful but no luck.
Any reply would be appreciated.
Thanks Charlie Bechler

That's the point..
I'm sure he include some routines for normal data cd-r / cd-rw
if some users are ask him for. Soundpool is realy expensiv..

More as 300 DM (For what?)

(Mac) TOAST 3.5.4 is free, burner-software bundle!

Regards, Robert

What's less? You looks like a guy with a lot of money left..
More as 300 DM if you like to get all 'features'
(Features that you found in TOAST for nothing.., as example)

Getting TOAST 3.5.4 for free, if i take my burner..
(75 DM as single Mac release, not 300 !)

Tss.. i whish roger create the data mode next..

Regards, Robert

Hi Charlie,

It may be a wrong TCP.STX module... check the version please.
Try to get hold of the version which is 10541 bytes, dated 13.10.97 (from the
Sting package v. 1.08), this one is OK. The newer versions create problems with
some of us, resulting in low transferrates. If you can't find it, I'll e-mail
it to you.

I have the following Atari ST manuals in mint condition, free to whoever wants them:

Internals
GEM Programmer's Reference
Tricks & Tips
Graphics & Sound
Peeks & Pokes
Introduction to MIDI Programming
Disk Drives Inside & Out

The only condition is that you pick them up personally from Quorn (near Loughborough, Leics.)
Email me if you want them, suggesting a date and time.

>for GFA Basic 3.6. A friend of mine need's them for a game he's
>writing...
The easiest way is to use the DMASOUND and DMACONTROL commands. But as
DMASOUND could crash in the compiled program better use:

```
PROCEDURE dmasound(st_adr%,end_adr%,rate|,mode|)
'
' Erstellt am 30.03.1996 von Holger Herzog
'
' Version 1.01
'
' Diese Routine ersetzt den DMASOUND-Befehl von GFA-Basic, der
' im Compilat zu Bomben f�hrt. Sie startet das Abspielen eines
' 8 Bit Mono- oder Stereosamples. Genauere Information s. DMASOUND-Doku.
'
' Hinweis: Weder von GFA, noch in ergo!help dokumentiert ist das Feature,
' mit Bit 7 von rate| zwischen Stereo- und Monosamples zu w�hlen.
' (Bit 7 gesetzt = Mono) Bei Stereosamples m�ssen sich die Bytes
' f�r linken und rechten Kanal abwechseln.
'
' st_adr% ==> Startadresse des Samples
' end_adr% ==> Endadresse des Samples
' rate| ==> Abspielrate (s. DMASOUND-Doku)
' mode| ==> Abspielmodus (s. DMASOUND-Doku)
'
' Version 1.0 30.03.1996 Holger Herzog
' Version 1.01 22.08.1996 Holger Herzog
' Stereo-Modus dokumentiert
'
SDPOKE &HFF8902,BYTE{SUCC(V:st_adr%)}
SDPOKE &HFF8904,BYTE{ADD(V:st_adr%,2)}
SDPOKE &HFF8906,BYTE{ADD(V:st_adr%,3)}
SDPOKE &HFF890E,BYTE{SUCC(V:end_adr%)}

So the HD has termination anyway and the CDR will not work with either
adaptor on it's own without external termination?
Have you tried removing the resistor packs from the HD and put both
devices in the chain using only the external terminator?

GEM has almost all of that. It's still lacking a JVM, though.
However, there is 256 colour and high resolution support, graphics and GUI
capabilities are built into the OS, 3DFX and OpenGL are lacking, there is
sound hardware support and development environments as well as a port of the
GNU C package and graphical web browsers.

2422. Slow Modem Transfer Rate

Newsgroup: comp.sys.atari.st
Date: 1998-05-02 00:00:00 UTC
From: bechler@midcoast.com
Message-ID: <6ig0hj$m2c@news.agate.net>
Source record: 101796

Hi,
Has anyone out there experienced slow modem speed on a Falcon030 with Cab 2.5/Sting. I'm talking about no more than 350 bytes per second, which is about 1/10th of what other people get. I've tried everything short of checking the serial port. All the people I've talked or E-Mailed to, such as Systems for Tomorrow, Wizztronics, Peter Rottengatter and others have been helpful but no luck.
Any reply would be appreciated.
Thanks Charlie Bechler

p> I do use Stoop, it's not the problem. And you know what ? I run
p> the Falcon with both STinG and Sockets at boot up with no problem
p> :-)

I never had the guts to try that. ;^)

I have Stoop change my CAB.OVLs for me anyway, so I also have it change the
sockets while it's at it.

p> What I meant is that I have to diconnect from one to reconnect
p> with the other to get the features that one have and not the
p> other and "lyc&#65533;e de Versailles" (as we sometimes say for "vice
p> versa" :-))

I got ya. Yeah, it's a bit annoying.

p> (btw, it seems I have less problems with IConnect for the
p> modules)

Same here, though the latest 030 CAB.OVL works MUCH better for me with
respect to the modules. I could hardly background download at all before.
Now I rarely have any problems, though my foreground application (usually
CAB) slows WAAAY down. This could be a setting somewhere, though.

Sorry, I thought I had mentioned that; yes I have tried.

>
>[Please don't bother sending me copies by mail, my newsfeed is fine]
Okey:)

Originally I tried the CD-ROM with HD Driver v3.1 and the translator supplied by System Solution, now using that combination caused a lock up at boot time; but when I used it with the demon version of HD drive 7.? I could get everything acknowledged but kept locking the hard drive when I accessed it.

I have tried using the original translator but using the ICD Boot 6.5.5, I can access the hard drive but, although the CDR is acknowledged it keeps coming back to drive not reponding! This happens with & without termination in all combinations! The hard drive does boot:)

Now, if I change the adapter and use the Link II, everything is reversed, I can get access to the CDR but no safe access to the hard

drive; all the file info is out e.g. 88769149149127647219 bytes used
in, need I say more. And the hard drive will not boot.

Running the ICD hd partition program, when the CDR is attached it
can't come back with number of heads etc. I don need to use
termination when using the ICD adaptor.
Cheers! for now
Steve

Terry,

You might check the setting for MagiC's "timeslice" CPX. I have found
with my TT that a 1:20 ratio gives good foregound/background speed with
a wide variety of apps.

That's what I'm using on my Falcon, with a length of 5 ms.

Note that the drastic slowdown of the foreground application only occurs when doing background downloads using STinG. It doesn't happen when using PPP-Connect. (Obviously there's SOME slowdown, but it's not near as dramatic.)

I've had as many as 12 background downloads going at once using PPP-Connect without the slowdown that I get with three or four background downloads using STinG.

It's probably a STinG setting somewhere, but I just haven't gotten around to investigating it. (My STinG Internals CPX is set for a delay of 10. That might have something to do with it.)

>---

Funny you mention that. After the change, and just using PAP, I began
to have log on problems. At first I thought it was just the ISP still
messin around. Eventually I disabled PAP and went back to the dial
script and connecting is flawless now. That is on the Solaris server.
The Windows ISP works great with PAP... Go figure.
I don't really see a speed increase per say, just less waits with CAB
and usenet after they installed the digital modems. It must have
opened up the lines a little on thier end.

Mike
Ahhhh, what the heck am I going to do with four Falcons?:). If I hook
them together, does 030+030+030+040=130:)

May I suggest Finder 2.0 which contains 3 sets, FSearch which uses
grep, Parfine which searches for files or .PRG's and Dupfind which
will check files and look for duplicates very useful in WP .PRG's.

I have them all on hard drive and they all have English manuals.

Regards

Trevor

2437. FS: Atari ST w/Hard Drive, Ext Floppy, Printer, Software

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: Stanley Nowak <snowak@pacbell.net>
Message-ID: <354CEFC0.D4FF1DB9@pacbell.net>
Source record: 101596

After 12 years of reliable service I must regretably sell my Atari ST. When I bought this machine in '86 I had to decide between the Mac (b&w monitor), Amiga (512K and memory upgrades were external port) or the Atari (REALLY, who considered the overpriced, underpowered PC?). I'm still convinced that the Atari was the best all-around machine.

I'll sell for $200.00 US (OrBetterOffer, of course) and you must pick up or, if you live nearby, I will deliver. I live in Daly City, California, which is just south of San Francisco. After reading the wacky posts made in response to the sale of a machine in Helena, Montana: If you don't know where California is, you're too far away for me to deliver.

These are components of machine:

Atari STF
1224 Color Monitor
210 Meg External Hard Drive, ICD connector (about 6 years old)
External Floppy
Epson EX-1000, 9 pin with sheet feeder (12 year ago sheet feeder cost as much as printer!)

Software

All the software disks and documentation are in excellent condition, but many applications, especially games have been transferred to zip lock bags.

LDW Power (Lotus 1-2-3 clone)

GFA Basic 3.0
Mark Williams C
Cambridge Lisp
STAC

DBManager

Flash II
First Cadd
Degas Elite

Extra Special trivia item: Original 1985 Atari ST demo disk

Let the games begin:

Gauntlet
Universe II
Breach II
Barbarian

Rogue
Shanghai
Checkmate
Battlehawk 1942
Dungeon Master (best game ever released on any personal computer)
Chaos Strikes Back
Balance of Powere
Star Fleet
Imperium
Fire Brigade
Railroad Tycoon
Star Flight
Empire
Sim City
PowerMonger
Populous
Borodino

There's probably a few more apps and games out there. I can't spend too much time doing inventory! Whatever I have you get.

About 10 books, almost all related to programming in Atari or GFA Basic or C.

PLUS: about 60 Start and STFormat magazines and/or disks. For about 30 magazines I've cut out the pages that describe the software on disk but these pages are neatly organized.

Thank you for your attention,

Stanley Nowak.

Martin, you're great. Simply filled in 10 preferred paths here and this works!
For some strange reason, NOW all files and folders show up in CAPITALIZED
characters and the original "small-letter-files" (e.g. on some PC-CD-Roms) are
shown in small characters... this was exactly the reverse before I added those
paths to the config... :-)

Well, as I said before, never used much of these CPX-es before. Even now I
limit that as much as possible, in fact the only active CPX-es I run are
Stings, one to set the palet on my machine (using the Jinnee palet here) and
one called Wincolors (it adds some colored styling to my windows)... that's it
and I never have problems with the time. Must say, this machine is never turned
off and picks up a daily timecheck everytime I log in at a mailer system. My
battery has been drained several years ago so whenever this TT goes down for
maintenance (or during severe thunderstorms) the clock slows down to zero as
well :-)

>
>I don't think so. The latest version 2.04 is only a few months old.

As I said, I wasn't sure myself... thought I'd seen a posting about it some
time ago... but then again, I could be wrong.

Tks for the great tip anyway!

2439. GRAFTOOL

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <894235670.3667.1.spot.c3adfca1@news.demon.nl>
Source record: 101598

Hi,

another subject this time...

Ever since it was publicly available I've been using (and registering) Graftool. First mostly in TT-medium, later, when I began using my card more frequently in 256 and (mostly) real Truecolor. In 16 colors it actually caught my attention, since it came closest to output of Speed of Light. Also it's faster compared with Gemview. OK, I'm not being paid by Joergen, so let's get to bizness:

I do a lot of catalogizing with Graftool. There's one strange thing I don't like however: when you put a bunch of files together for making a catalog, and one or more files appear to be "corrupt", Graftool will tell you in the log window, but what's worse, it eats up your memory.
Appearently, Graftool looks into the file, reserves memory for it, then discovers it's a corrupt one, won't put it in the catalog and also "forgets" to give the reserved memory back to the system.
So, suppose you have a CD with 500 files, all of which are OK, next you tell Graftool to cat it and you have no problem.
The next CD contains 500 files too, but 10% seems to be corrupt: you see your RAM go down all the way, until finally everything has been taken, next Graftool displays a message about "it wants somuch, but it has only somuch" and quits.
End of catting, lotsa time wasted and no catalog at all...
(Well OK, I'm still waiting for this new Aixit TT-RAM board to arrive with 64 Megs, so the problem is not that critical for me, but there's lotsa people with only 4 megs or even less)

I'm just wondering, are there more people who came across this problem?
Maybe it's about time to tell Joergen about it (haven't done so, yet).

>
> Does anone know whats going on?

Robert,

I had this happen once, but I also got an "out of memory" alert flash on the screen before my password got rejected. Normally (using MagiC) I have NEWsie loaded before I load anything else. On this occassion I had a couple of other programs in memory before I loaded NEWsie and this is what seemed to have caused the problem. As I have a TT I just changed NEWsie's flags to use TT memory, it has been set to run only in ST RAM, and I have not had this problem since.

If you have limited memory and are running MagiC or Geneva I would suggest that you try loading NEWsie after you have a couple of other programs resident and see if the problem reoccurs. It did for me :)

Regards,

Steve Hammond

> A boring and time consuming job (yes, I know -I've done this a LOT!).

You've answered your own question, Hallvard <g>.

There's an easier, less time-consuming way to do all this, but it requires the use of the commercial IconsCons editor bundled with the Ease desktop. IconsCons works similar to ORCS' 'load image' but the clipping interface is better (among other things).

Since you require only a monochrome RSC, send me a screengrab of the NeoDesk 4 icons you want converted. I'll use IconsCons and then send you back a monochrome RSC, including the mask layers (created using the editor's handy auto mask feature). In the screengrabs, just erase the icons you don't want converted -- this way I won't be converting icons that'll never be used.

yes of course, it is an atari ain't it... lol
ok use a ICD to scsi controller
then put the cdrom (scsi)
and the adaptec controller (scsi) on the scsi chain
remember the termination of a scsi chain.

ok the set up looks like this

atari
ICD (dma>scsi)
cdrom (scsi
adaptec (scsi) this goes from scsi to mfm or rll

I use this set up all the time
the adaptec board I use is a 5500a
which allows 4 mfm hard drives..
You do know the limitations of the hd size by tos 1.0 and 1.2
?

well you can use ICD's interface and a Adaptec 5500a
ok the ICD interfaces to scsi and the 5500a interfaces to mfm for the
drives... so you could put the icd>then chain the CDROM and then chain the
5500a controller together..
looks like this

Atari>ICD-----cdrom
\----adaptec 5500a
\--------hard drives
the adaptec device is a scsi to mfm
there are also scsi to rll

I have a 1040ST in the shop at the moment being refurbished (chips reseated and cleaned) and generally being put in first class shape. Anyone who might be interested in buying it, please e-mail me, comes with power cord and mouse (original Atari mouse) and 1 meg memory. I will make a list of those interested and when I retrieve it I will contact you. e-mail replies only please and thank you. sfpu@scfn.thpl.lib.fl.us

2453. Fredom/NFS/Newsie bug?

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: mgrove@iwvisp.com
Message-ID: <6ii9fqhic1@supernews.com>
Source record: 101612

After installing Freedom 2.04 with the hopes of solving the long filename problem under MiNT/N_AES and Selectric, I discovered a problem while downloading with Newsie.

To recreate the "bug" go to a binaries group (like alt.binaries.pictures.aircraft) and download a pic. Decode it with Newsie. Next, while downloading another pic, view the first pic with ImageCopy. After the second pic has been rec'vd, close the first image, decode the second image from within Newsie, and again try to view the second image with ImageCopy (or whatever). What I found was the second file overwrites the original file, keeping the first images file name. Try it a few times if you do get two seperate files on the first attempt.
Either I have something configured wrong, or there a problem with one of the applicatons. Freedom crashed out after trying to view 5 consecitive images, all saved as the first image file name.

Any ideas?

Mike

2454. Harddisk on 1040 Desktop

Hi There.

I have my ST1040 since 12 Month and now i buy a Hardisk.
I have make two Partitions (C=15MB D=15MB) and have Formatted them.

My Problem is now:

How can i see these two Partitions on the Destop as DISKDRIVE C + D,
(made with HDX.prg and HINSTALL.prg)
it is possible to Boot from the Hardisk like on Amiga and PC ???

Please answer me as soon as possible to that follow Mail:

Muskote@t-online.de

Thanks to all !!!

From: Muskote@t-online.de
Message-ID: <6iiq67$4ie$2@news00.btx.dtag.de>
Source record: 101614

Hallo an alle die diesen Hilferuf lesen.

Ich habe nun vor einem Jahr diesen ST1040 gekauft weil ich mein
Synthi zum Leben erwecken wollte.

Vor einer Woche konnte ich dann auf einem Flohmarkt fï¿½r 10 DM eine
Megafile 30 erstehen, die ich mittlerweile angeschlossen bekommen habe.
Ich habe die Festplatte nun mit HDX Partitioniert (C+D) und Formatiert.

Nun bekomme ich von der Festplatte auf dem Bildschirm aber nichts zu sehen,
nur die zwei Disklaufwerke A+B.
Wenn ich auf die Festplatte zugreifen will, muss ich immer erst HDX oder
HINSTALL starten, das ist mir zu umstï¿½ndlich.

Wie muss ich es anstellen das meine Festplatte auch auf dem Desktop`sprich
Workbench` zu sehen und benutzbar ist ??

Ist es auch mï¿½glich von der Festplatte zu booten ??
Welche Software brauche ich dafï¿½r

Leider habe ich ï¿½berhaupt keinerlei Bï¿½cher, Hefte oder sonst welche
Manuals fï¿½r ST & Co, ich sehe Euch als letze Hoffnung.

Bitte schreibt an meine E-Mail, ich schaue nur selten in den NEWS rein.

Vielen Dank schon einmal.

Muskote@t-online.de

Hi Gary

I have used one, once but what the accessory was called has illuded
me. I used to use this program a fair bit, as it also allowed you to
look and edit files & memory. I lost the file 6-7 years ago and
haven't come across it since.

So you mught as well go ahead and write one:)))

Cheers! for now

hi all

i have just bought a 2.1 gig quantum hd i know all about device no's drivers partition sizes ect, my problem is this

the falcon sees it as 2.1 gig

the ste with the translator sees it as 1 gig

the mega ste via the internal host can't see it at all

is there some sort of size limit on scsi/tos's/hosts ?

all the best

That sounds very useful. I think Gary mentioned he will try to
implement this. I'm still getting mail addressed to unforeseen
addresses, my solution of the moment is to rename them "rosco.txt"
(after the first import) - then they are sorted properly according to
mailfold.inf.

FSEARCH is one, there's also a search function in CAB that allows you
to stop mid-search (FSEARCH goes to the end, which can take a _long_
time).

>
> Regards, Robert

Robert,

The problem is the latest TCP.STX module - with some users (myself included) incoming information slows to a crawl, getting as slow as 100 to 200 bps. It has nothing to do with the modem speed. The same STX, however (in my case), provides fast outgoing data throughput. Everone, so far, that has experienced this problems has been able to cure it by using the TCP.STX module dated 10/13/97 which I beleive is the one from STinG version 1.10. By using the older module with the latest version of STinG, Dialer and other STX's incoming data will climb to arround 3500 bps with a 28.8 modem.

Harry - try entering only 193.190.205.13 as Newsie's FTP address (delete the ftp:// header). Just connected with the FTP site with no problem.

```
Look in the RSC directory in the directory where CAB resides. There, you'll
find RSCs for several other languages. Delete the CAB.RSC in the CAB
directory, move the RSC for your desired language into the CAB directory and
rename it CAB.RSC.

Yep, I noticed this too. The server is a Window$ one and from time to
time the server likes to go down. The problem is that the webmaster of
that site is a student which means he isn't there during the weekend.
I hope he will restore the connection tonight.
Correction: At 14:00 (+02:00 MET DST) to site was accesible.

You can find the diamond Edge patch at ftp.lip6.fr pub/atari/disk.
I will try to upload the Diamond Back v3.6 patch to that site ASAP.
In the mean while I've done this (incoming dir)
I also uploaded the two patches to ftp.funet.fi

2470. New Finger Daemon for STinG

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <99520241_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 101656
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

A new Finger Daemon (server) is now available from my web site (see sig).

This program is written specifically to run with STinG in a multitasking environment.

If you don't know what a Finger Daemon is, then you probably won't need it, but I thought I'd announce that there is at least one available for STinG.

Surf to my web page, and look for AFINGERD.

Regards,
Gary

2473. Password resetting

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: rgc@zetnet.co.uk
Message-ID: <6ii59v$6ms$1@irk.zetnet.co.uk>
Source record: 101659

Has anyone had a similar problem to this?

I am using Newsie 0.88 and Sting. Every so often when I try to download or check my e-mail, I keep getting a 'password invalid' message - and consequently no e-mail. This seems to happen without me changing any other settings and I have to call Zetnet to get them to reset it. They seem to think that it is the software that is causing the probs. I have checked all the info in dialogs - password, full name, address etc and everything seems to be in order.

Does anone know whats going on?

Thanks

Robert

Yep just enter 193.190.204.13
Logon: ftp
Password: a valable e-mail address
Path: atari

Don't use archive/atari as path as you'll arrive in the root dir of
the server.

I've SMU running on my Hades using N.AES/freeMiNT 1.14.7/Thing. So you
certainly don't need MagiC to use it. You need however a multitasking
system like N.AES or Multitos.

Yes there are a few very good one, unfortunately only German.

1. Parafine v 1.37. This is what the docs says about it

ParaFin ist ein GEM Programm/Accessory, das ein/mehrere
Laufwerke oder einen Pfad rekursiv nach Dateien durchsucht, die
bestimmten anzugebenden Kriterien genï¿½gen. Schon wï¿½hrend der
Suche kann in anderen Programmen weitergearbeitet und in ParaFin
bereits gefundene Dateien verarbeitet werden.

It's really a very good one. It supports the AV-protocol, this
means that one can drag and drop the founded files to the prg one
which to use for these files. Search for names with wildcards. You
can also search for particular Attribut-flags, dates, etc.
It's a shareware prg but the only restriction I know is that one
get a registration message when one start the prog.

2. Finder v1.10 of Holger Weets

Finder V1.10 von Holger Weets ist ein File- und
String-Suchprogramm sowie ein Katalogisierer mit vielen
Features, wie z.B. dem Durchsuchen von Archiven, Unterstï¿½tzung
langer Dateinamen, Suchen im Hintergrund etc.

I don't have experience with this prg but I think it will does
something similar like Parafine. It should be able to search for
files in archives.

3. I'm not sure but I think that the search option of Freedom 2.x can
be used for your purpose also.

I've both progs on my harddisk so if you can't find them let me know
I'll upload them to the Belgian ftp-site. Parafine is probably there
already.

Yeah, Pure C v1.2 will do that (search multiple). It might be
cheaper to commission a custom program, if that is all you want.

Changing jumpers is not required for the removal of the IDE drive. It
is most likey how your hard disk driver is configured, as Kev points
out (assuming everything was working well before you removed the IDE).

Hi Hallvard,

well, I'm not using the very latest version, but freedom2.cnf works here.
It's generated from the CPX indeed, the CPX doesn't have to be active, only
when you want to change things.

> >2) How on earth do I set up paths for often-used folders like in
> "Selectric"? And how do I select them? The same way as with Selectric
> perhaps?

AFAIK it's not possible... that was the first thing I disliked, but I've found
a way around this: first, Freedom recalls paths by itself during a session
(from where it's started till the next reset). So if you used path
d:\folder1\folder2\folder3 last time, work on f:\folderX\folderY after that and
later in G:\root, it will go back to those paths whenever you hit alt-d, alt-f
or alt-g. Another thing is, it keeps track of the last 100 (I believe...) files
you worked on: double click in the "selector-box" in the top and you'll find a
scrollable list of the last somany files you've been working with. The problem
is, as soon as you reboot, all the info has gone... Another thing sometimes
drivin' me mad is everytime you call Freedom it's in C:\CPX\CPX... You can
change that in the config, but that's no real solution either :-(
Apart from that I more or less got hooked to this fileselector.

> >3) for some reason the date is set to 00:00:80 each time. Strangely
> enough the time is correct. Why is this? And where can I check the
> date in the file-selector? In the Xcontrol.ACC control panel the
> date was shown at the top of the control panel -a nice feature.
>
This beats me.... haven't seen any problems here...
If you mean the date of files in the selector window, I set the "Std-Format" to

%-F %-E%11P %D.%M.%Y so my files show up as "name" "size" "date". I have hardly worked with X or Z-control in the past, also hardly with CPX-es, and since Freedom I just use it mainly for a fileselector, the second option (CPX-control) just came in handy. I used to have Menuinfo as my date/time/available RAM info supplier in the menubar, since a few months I use Clock.app under MagiC as my desktop clock, Menuinfo only servs me now with ST/TT RAM plus screensaver.
I recall the first time I installed Freedom, it somehow managed to screw up this "Std-Format" info so I got all kinds of weird info in the box. Maybe the same happened to you? Try again with the original CNF file from the archive.

I seem to recall from the docs that a "paths-saving-option" would become available "later"... tho' I'm not sure about this.

I'm not absolutely sure, but I understand further development of this software has been suspended already????

Gribnif Software's 10th Anniversary Sale

It all started ten years ago with the release of NeoDesk 1.0, a program few even thought could be written. Since then, companies have come and gone, but we're still here providing software for Atari computers.

As a way of saying "Thank You" for ten wonderful years, we're offering special discounts of up to
50% on nearly all our major products, now through May 31! If you've put off buying Geneva or NeoDesk all these years,
now is definitely the time to get it!

Here are just some of the special prices available:

** NeoDesk 4: The latest version of the original desktop replacement for Atari computers is now just $35!

** Geneva: The multitasking application environment is now just $35, as well

** XBoot III, the premier boot manager, is now $30

** CardFile 4, the personal information manager, is $20

** ...and we even have a few copies left of NeoDesk 3, for just $10 each!

Prices listed do not include shipping. See <http://www.pair.com/gribnif> for more products and info.

Ok, but I tried running it with oAESis/freeMiNT 1.14.7/Thing (Yes, I know that
oAESis only is beta, and probably won't be developed further but I haven't had
to much trouble with it)

The doc's that follow SMU tells me that I need some small system program that
is included in the Magic-package in order to get SMU working under i.e.
multiTOS. Is this right, and if so where can I get it? If not, what are the
necessery adjustments that the SMU-*inf will need..?

Thanx in advance!

>Atari Falcon030, TT030 or other Atari-compatible with SCSI interface
>a compatible CD recorder device (see above for list)
>blank CD-R (CD-Recordable) disks
>a large hard disk drive to store your audio files before writing them
>to a CD-R disk"

OK, I don't think CDRecorder Pro v2 works with sub 030 processors, but v1 does
if you're willing to work at x1 (possibly x2). The compatible list is pretty
long, including Yamaha (which I have), Phillips, Plasmon, HP, some SCSI Mitsumi
and also the x4 TEAC drives which are supported at x4 on 030 and up machines....
I don't want this to turn into a <My softwaer is better than yours> thread, I
see too much of that on Cubase vs Notator/Creator ones, but Soundpools software

is already working and available, has been so for 18 months or so and is at v2....if you own several pieces of Soundpool software you can sensibly upgrade to a dongle instead of Keydisks as well...which I might do anyway.....and if you are thinking why do they need this it is because pirate software is killing the Atari market.......

In fact it's a *epx* so Hallvart must look into the EPX dir to find
the configuartion stuff.

>> >2) How on earth do I set up paths for often-used folders like in
>> "Selectric"? And how do I select them? The same way as with Selectric
>> perhaps?

>AFAIK it's not possible...

Wrong it's possible. At first I thought this too but the path must be
set by using an ASCII-editor. I just find this out a few minutes ago.
It seems that the configuration.epx can't does this by it own.
Load freedom2.cnf into an editor and look for $pth. Below this fill in
the path you want to use. After saving and rebooting you can find
these paths if you *right click* somewhere on the *path menu box*. Not
sure how to call this box. It's the box where for instance c:*
stands. I hope you get the picture

example of a part of my freedom2.cnf

$pth
K:\TEMP\SPOOL*.*
K:\TEMP\DOWNLOAD*.*
$ext
.

>> >3) for some reason the date is set to 00:00:80 each time. Strangely

To set the date you must use clock.cpx of something similare.
Yes, I know that for some dark reason the time is set now and then to
the above mentioned values. This is one of the reasons why I don't use
Freedom 2 on my Hades. From what I recall this happens when you access
the cpx's.

>I'm not absolutely sure, but I understand further development of this software
>has been suspended already????

I don't think so. The latest version 2.04 is only a few months old.
You'll find this version If you can access the Belgian ftp-site
193.190.205.13 atari/incoming. Lots of people seems to have trouble to
access this site lately. A few hours ago it was accessible, at least
for me

>years to a decade behind the times..

Nice way to appreciate your customers, isn't this.. those customers
who made you earn your money - those who helped toward your income..
your living. Nice one!

>>I have a pc alongside my Atari and my humble 16-bit offering leaves
>>the pc standing, so I leave the pc to what it does best, play games:)
>Well serves you right for keeping that old Atari PC3!

Did he say he had a PC3? Can you actually read? Read the message - he
said he uses his PC to play games - as such he has a fairly up to date
PC - something not older than a year or so.

>Dump the lot & buy a proper computer..

OK, you gonna give me the money to go and buy a SHI Indigo or Iris..
maybe even a DEC Alpha? ;)

Nigel, whther you like it or not, quite a few Atari users like myself
not only use Ataris.. I, for example, also have a Macintosh and a PC.
I am also a staunch UNIX believer and user.

>Thats it you sad Atari tosers..
>this thread is dead...

So shut up then. ;)

Hi Robert,

only thing I could think of was maybe you forgot to tell Newsie as well what your password is. You said however, the configs were OK, so I think they are (check the config file for Newsie again after a connection to your host, just in case).
Next I read the follow-up from "Kev", who describes the same problem with the same ISP. You quote them "they seem to think that it is the software that is causing the probs"... yes indeed, but I'm inclined to think it's THEIR software... What d'ya mean by "they have to reset it"? Looks like their own stuff gets screwed, so for the time being I can't give you anything else than "doublecheck yer own settings and if that ain't good enough, let them fix the problem on their end!".

If you are using a manual switchbox, it is risky. If you want to play
it safe, either switch only while the computer and printers are off,
or get an electronic switchbox. ComputerGate International
(http://www.computergate.com) sells a suitable switchbox (catalog
#SB2502AU) for only $6.95. I have noticed Wal-Mart (do you have those
in Canada?) sells a similar one for about $10. No risk to your
machines, and automatic switching, to boot.

Hi Kevin,
This is an old problem with some hosts and TOS versions....also with some hard-drives too....First off disable Unit Attention on the drive if you can, TOS (of any version AFAIK) doesn't like it. It's entirely possible the HD software you're using wioth the Translator can't handle m,ore than 1 Gb of drive space. Link's seem toi ahndle the big drives OK. The MEga's internal host is probably quite old and can't live with drives that big. If your Falc has the same problems as mine you won't be able to access the drive in bigger partitions than 512Mb....big enough for most things but a pain for D2D or CDR...

2499. ---> SUPPORT MEGA 3 <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6iimpb$k79$1@heliodor.xara.net>
Source record: 101685

For those of you who have not seen the best disczine around send a E-mail to me and request issue 1 or 2.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't.

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it.

So come on, Lets have some feedback, I want to make it YOUR zine, Let us know what your would like to see happen and the MEGA team will support your idea.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time.

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him.

It's got me beat I'm afraid, the last thing I can try (and you've
probably already checked it a million time anyway) is to make sure your
HD driver is set to ignore the SCSI ID of the CD drive.

From: lsdodman@rogers.wave.ca
Message-ID: <354bc1a5.28907147@news.on.rogers.wave.ca>
Source record: 101810

I have an Atari 520 ST, which I upgraded many years ago to 1Mb of RAM, I have a hard drive and DOS emulator. I haven't used the Atari in a long time, my son uses it for games.

My son and daughter are now very heavy into music, they both play quitars. What is it I need (hardware and software) for the Atari to take andvantage of it's MIDI ports? Is it possible to attach the quitars to the computer and enter quitar music tracks etc, can the computer play the quitars? Is there a speaker/amplifire system available for this system?

Is it possible to pick up any of the stuff I need in the Toronto, Ontario Canada region?

thanks in advance.............

While this works for A-Z -> a-z, it fails for the chars above 128. That's
the only reason for the LUT. I've toyed with the idea of re-doing the
basic part in m/code, just to add a touch of speed. The idea I had was
pass the address and length of the string, and let the code do the rest.
Much nicer than:

FOR i&=1 to LEN(the.string$)
MID$(the.string$,i&,1)=CHR$(PEEK(table%+ASC(MID$(the.string$,i&,1))))
NEXT i&

as well as a bit faster and much less memory-hungry. All I've to do now is
get round to writing it.

Which version are you using? I've v3.10 and haven't (yet) been able to get
it to compress long filenames, and it was only by accident that I found out
that the TTP could. If you've any other information to add, especially as
how to get the GEM version to work with LFNs would be greatly appreciated.

>]- Are there ANY BBS programs for the Atari ST that are still being
>]-devloped and supported?

Whatever happened to Fnordadel? I have the most recent known version by the original author laying around which I never did upload anywhere... I posted a message about it a year ago, and I got a reply from someone who had picked up the source. Looking at my old ansiterm disk I can no longer find the message. Win95's file search can't even find it... Maybe I'll be lucky and he still reads this newsgroup...

Get a genuine atari one... You can find a text file on aminet that tells
you how to hack one to work on an Amiga. Easily modified to work on an ST
instead. I did it...

That may well be right. It may also explain why it's used in the way that's indicated in BEM - the Bavaria Event Manager. This looks to be an interesting program, but I can't see exactly what it's trying to do without knowing what CatzPutz is for...

h> You can probably read about it in the "CAT" FAQ (which is in German):

mb> I haven't the faintest idea what this means, can anyone help?

To save on disk space it's possible to pack the executable in such a way that when you double-click on it, it will unpack before running. I expect DCSquish has been used on yours.

I'm not entirely sure, but I think there's a utilitycalled MegaDepack which will uncompress the file back into its original state for patching (and repacking if you like).

If you have plenty of HD space you may find it quicker to keep your programs unpacked for faster loading.

Go on then.

There'd also need to be some kind of hook that would allow fixes, upgrades
and extensions to these protocols to be patched in.

Environment variable support is also pretty essential ISTM

>(which winds up everyone else who uses my PC - hehe) but sadly that is
>the end of the similarities between Gem and Windoze, except perhaps to
>state that if Gem had any more similarities then we wouldn't be using
>it! <G>

You can drag it to the side too, but that looks really strange, and
probably has a similar problem to the one below...

IMHO, having it at the top makes *much* more sense, because when you start
getting a lot of stuff under Programs, I hate the way the menu pops
upwards, you end up moving the mouse most of the way across the screen all
the time. At the top the menu pops *down* like god intended...

I put it back at the bottom after a while because I found a *lot* of
programs seem to get the height of the working area correct, but do not*
check the x,y location and assume 0,0. You end up with windows constantly
opening with the titlebar hiding under the taskbar, (with a big hole at the
bottom about the size of the taskbar...) which makes it rather difficult to
move, resize or close the window...

Judging from this, the multi-monitor support in Win98 is going to be so*
much fun... :P

> Much nicer than:

```
> FOR i&=1 to LEN(the.string$)
> MID$(the.string$,i&,1)=CHR$(PEEK(table%+ASC(MID$(the.string$,i&,1))))
> NEXT i&
```

(I can't tell which version of BASIC you are using, so some of these suggestions may not yield any improvement in code size or speed)

First optimisation: calculate the string length _before_ entering the loop. Depending on how good your BASIC is, it may already do this. But, it doesn't have to. So, the code becomes:

```
length = len( the.string$ )
For i = 1 to length
do stuff
Next i
```

Second optimisation: You've calculated the same address twice as part of two MID$ statements. Calculate it once, and use the calculated result later.

```
address = adr( mid$( the.string$, i, 1 ) )
bytepoke address, bytepeek( adr( table + bytepeek( address ) ) )
```

Third optimisation: move the address calculation out of the loop - you only need to find the start of the.string$, and you'll be stepping through it byte by byte, so there is no need to recalculate the address on every iteration.

So, it becomes:

```
address = adr( the.string )
length = len( the.string )
for i = 1 to length
address = address + 1
bytepoke address, bytepeek( adr( table + bytepeek( address ) ) )
next i
```

I haven't coded seriously in basic in about a decade, so these suggestions on code optimisations may not be worth the effort of changing your code.

From: look@my.sig
Message-ID: <354bf7ab.26654523@news.wavetech.net>
Source record: 101825

Ok, I've got a 520STfm with a 2mb upgrade card and an interesting TOS
1.0-1.4 switcher, that I want to move over to a MegaST2. Using knowledge
gained from upgrading a different 520ST to 1mb, I managed to rip the chips
off the memory upgrade card, and put them in the mega along with capacitors
next to each chip, and three resitors at R71, R72 and R74. Seems to work,
(4mb, maybe I can get a usefull MiNT setup now...) but I just want to be
sure I didn't forget something thats gonna make it explode later...

The TOS switcher is rather interesting, it uses a method I've never seen
mentioned before... It uses custom burnt chips which are set in the sockets
with pin 1 pulled out. They all have pin 1 strung together, with a resistor
(brown black red gold, too lazy to dig up my electronics notes...)
connecting pin 1 to pin 15 on one of the chips, as well as a wire with a
switch connecting all the pin 1's to ground. When the switch is open, you
get TOS 1.0, when closed, you get 1.4.

The problem lies in that the switchable TOS uses a six-chip set, but the
mega has the stock two-chip TOS 1.2. The switchable TOS has chips labeled
U2 through U7, but the mega has sockets labled like this:

U4 LO-2 U3 HI-2
U7 LO-1 U6 HI-1
U10 LO-0 U9 HI-0

What order do the chips fit in the sockets? And what magic jumpers do I
have to set to make it use six chips instead of two?

hello Les:

It's hard to figure out where to start! The St has MIDI IN and
OUT. What you need is :
1. a Software application called a Sequencer. There are some good
shareware and freeware on the net..Sweet 16 and Trackman, plus a
host of other music apps from Hitsquad, and FTP sites.Do a search
on your browser for "atari midi sequencers" and you should find
some stuff. A popular commercial package is stienbergs CUBASE, and
Emagic Logic for atari.
2. A midi sound module/sythesizer. Go to your local music store or
classified ads. A popular format is what is called GM or General
midi.Some popular brands are Yamaha, Roland,Emu, and Ensonique. I
use as my main keyboard a Yamaha PSR 510, which is sold as a
"consumer" keybrd, but is GM, so I can get 16 sounds at once,
once it is attached to the atari. (Midi out from the keybrd to
Midi IN on the atari/Midi out from the atari to the Midi IN on the
keybrd.)
3.For guitar..you will need a Midi guitar or a special pickup that
is attached to your guitar which translates it into Midi Language.
Again..your local music shop can help you on this.A popular brand
is Roland. What the midi guitar will do is 'Play" the sound

modules.
4. To amplify this , you can just use your stereo, or guitar amps. The sound will be coming out of the midi sound modules/synthesizers. Some modules are stereo, so you can get a full sound.

I know this sounds like a lot, but what you are doing is setting up a Midi studio that will be fantastic composing Tools.Since the midi ports are built into the atari, you won't need a seperate interface. You would need this stuff even if you had a PC/Mac system, the difference being you need a seperate midi interface for those platforms. Also Midi seems to have better timing on the atari. That is why a lot of musicians are going back to Atari because of the timing issue.

Have FUN!

Atarian
Tim Conrardy

I'm having trouble connecting with this site; could someone who has
already gotten these patch programs upload them to lip6 or umich,
please?

Thanks,

>anything special when you ran it?
Oh yes, right, wasn't there something about changing the system cursors?
What I said only referred to the cursor editing functions. I never tried to
get alternate pointers. Sorry, seems like you're right then.

hi Les,

as far as hard disk recording is concerned, an ST can't do it
unless you use a version of Cubase Audio for use with a Yamaha hard
disk recorder - and you'll need a SCSI host adaptor to take advantage
of it. OTOH, if you can get a sequencer that supports MIDI Time Code,
you could use one of the hardware audio recorders (like the Roland VS
models, or TASCAM's MiniDisc recorders) you can sync up and record to
your heart's content. You'll also definitely need to get some sort of
keyboard with multi-timbral capability for your backing tracks.
>
>Is it possible to pick up any of the stuff I need in the Toronto,

You can try Saved By Technology in Toronto; they still have a
number of Atari titles like Notator SL. You're also welcome to come to
a TAF meeting (our next one is on May 20th) and we can maybe see if we
can get you headed in the right direction.....

Sorry Martin, but I still can't get through to this site. I get a DNS
Query error in Newsie's FTP (which is working well enough elsewhere).

I should be using ftp://193.190.205.13 and directory /archive/atari/
shouldn't I ?

That's interesting. As asked elsewhere, would I use the 1.2904 OVL with
STinG in Cab v2.5's MODULE folder? I've completely lost track of this
issue... B^{<

>Now I rarely have any problems, though my foreground application (usually

Along the lines of what Steve said, I use 1:25 timeslices here, but I'm not
sure that background tasks are very fast with that either...

2540. Program that searches all files for a string of text?

Newsgroup: comp.sys.atari.st
Date: 1998-05-03 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <57780855_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 101841

Can anyone tell me, if there is a program that will search all files in a directory for a specific string of characters, and display the files that contain this string?

I'm forever having to individually load files into an editor, manually search for a word, then move on to the next file, when it's not found. I would like to automate this process!

I guess if there isn't one, then I'll have to write one. :)

Regards,
Gary

I've finally got the Loguch program I was looking for, and it's such a nice little tool that I've uploaded it to ftp.funet.fi (logbuch.lzh).

It's a programstarter that produces a popup of earlier started programs, configurable via a cpx and has support for Stic's mini icons.

Multitasking systems only!

Message-ID: <354dd364.1650499@news.tmisnet.com>
Source record: 101494

Hmmm ... looks like maybe a broken solder joint
or a broken trace on the motherboard, given your
explanation.

If you're handy with a soldering iron (it's tricky!)
you can touch each of the connections for the mouse
connector at the PCB to re-solder the connection and
see if it cures the problem.

While the case is open, look closely at the traces
around the connector for hairline cracks (I usually
use a magnifier for inspections this critical). If
you find any, a short "jumper wire" soldered across
the break will restore continuity.

If resoldering the connector doesn't work, you may
need to get a schematic for your machine and directly
hand-wire each of the connector pins to it's destination
on the board, bypassing any hidden hairline fracture.
This is not an easy or quick solution -- I'd have an
Atari service shop fix it (personal opinion).

Well the hard drive is a MiniS 127meg, so it doesn't even come anyway
near the limit. Both devices are SCSI and I have tried with all
methods of termionation in all combinations.

What I wanted to know was could I connect BOTH of my DMA-to-SCSI
adaptors in parallel; so that I can have one on the CDR and one on the
HD.

One is System Solutions translator and the other is the ICD Link 2!

Cheers! for now
Steve

I'm not using a multitasking system, but you could still do it this
way - write down the address, quit POPwatch, edit ALIAS, back to
POPwatch, and download!

It seems easier just to use the -u function of OIMPORT or change the
name of the offending email.

This sounds very much like the problem of fractured soldering where
the mouse socket attaches to the PCB.

You will have to take your m/c to pieces so that you can see the
soldering. Have a good look with a bright light and a magnifying
glass. It might be obvious where the fractured solder is.

If not take a soldering iron with a fine point and CAREFULLY remelt
the solder on each socket pin so that it flows and makes a good joint.

Diamond Edge Version 2.04 Patch
October 3, 1985

This program will patch Diamond Edge 2 V2.00, 2.01,
2.02, or 2.03 to version 2.04. It will also patch
Diamond Mirror V2.0 to V2.1. Place DE2PATCH.PRG,
DE203PAT.DAT, and DM21PAT.DAT in your EDGE directory
and double click on DE2PATCH.PRG to apply the patch.

All Diamond Edge 2 owners should apply this patch.

In the mean while I uploaded (not downloaded ofcourse like I've said
in my previous postings) these patches to ftp.funet.fi and
ftp.lip6.fr.

>even webpage./

I don't understand your statement quite well I'm afraid.
Yes I'm using Taskbar. In the early days I was using *multistrip v1.3*
which is btw a very usefull tool but like you have said once to me it
consumes too much cpu time.
AFAIK Taskbar needs Start Me Up in order to work. Right?
So how can Taskbar be better then SMU? How on earth can one edit
Taskbar so it can start prg's and so on without SMU?

>Well, as I said before, never used much of these CPX-es before.

It's a very weird problem. Freedom 2 managed to show me a time like
this yesterday: 31:02 (h:m). I didn't know that a day counted more
then 24 hours:-). The date was also wrong but I can't recall me the
exact value.
>>
>>I don't think so. The latest version 2.04 is only a few months old.

>>for me
>
>As I said, I wasn't sure myself... thought I'd seen a posting about it some
>time ago... but then again, I could be wrong.

The authors released the latest version as shareware without any
restriction. With the older versions one had to write (and pay) to
the authors to get a key. In order to save time (these are the authors
words) they suspended the key.
Maybe this is a sign that they are about to quite the Atari scene
afterall.

I have the opportunity to receive an old Stylus Pro printer which
allows the use of A3 sheets ...

Do you know if any program will allow the use of this format ?
Calamus ? Image Copy ? Any other ?

Thank you for any answer.

Hi Charles
>
>Well, the dialin script only allows 6 lines ;) If I remember correctly
>Zetnet has an long series on dialin ;(If you can't figure a shorter
>login procuder, your SOL...
Yep, and this is going to be the problem, including all the
FIND\RESP\WAIT strings there are 18 of them in the Dial.Scr for Stik,
and theres 20 in Sting.
When I can find time, will have to play around and see whats happens.
At present I get an error, and can't disconnect, warm boot seems to
get out of the problem without dropping the carrier, I can then
disconnect.
thanks for the help anyhow.
If I get it going, will post to the n.g.

WARNING - DIGRESSION AHEAD!

I don't think that piracy can be blamed for killing the Atari market - more likely, Atari is to blame for that. Copy protection and dongles are also to blame in a big way.

I hate dongles, particularly because I own Notator, Logic, Cubase, Cubase Audio, Pro24, Chronos 3D, and a few other packages that use dongles, and they are always a source of system instability. I have lost hundreds of hours of work due to dongle malfunctions - and lots of time since pass through dongles always interfere with normal operation and require switching of cables, while normal cart dongles require additional wear on the port. I eventually had to purchase a multi-cart switcher to minimize this.

This in itself is offensive - I had to buy additional hardware in order to use the _software_ that I PAID for without risking further damage to my computer.

Copy protection killed my interest in purchasing many Atari software titles. A day came that I stopped buying new Atari games because I knew they would be copy protected - and this sentiment was shared by many Atari users that I have known.

Back in the days that the same games were being made for PC and Atari, it was terribly offensive to see that only the Atari versions were protected and, hence:

1. Were not hard disk installable
2. Were difficult to back-up (since we all know floppies are _so_ reliable.
3. Were not compatible with all floppy drives
4. Were not compatible with all operating systems

It was terribly upsetting to purchase a new game, only to find that it wouldn't run on my system because of the copy protection!

I certainly do not condone or agree with software piracy. I personally own more legitimate Atari software than almost anyone - and believe that it is critical for people to purchase the software that they use in order

to keep the authors of such software in business. I do however vehemently disagree with the use of copy protection, in that pirates always find ways to get around it anyway, while the legitimate buyer is made to suffer.

Want to reduce piracy? Make good quality software, make it accessible, and price it fairly.

Here's one suggestion, under Preferences -> Server Address you'll find
a couple of timeout entries, one marked 'maximum timeout', the other
marked 'from last character'. Try setting these to 60 and 40, respectively.
This may reduce the number of fragmented messages, if not completely remove
the problem. Of course, if they're not a result of timeouts, it won't
really make much difference.

2568. ---> SUPPORT MEGA 3 <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-04 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6il8uk$5ip$1@heliodor.xara.net>
Source record: 101519

For those of you who have not seen the best disczine around send a E-mail to me and request issue 1 or 2.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't.

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it.

So come on, Lets have some feedback, I want to make it YOUR zine, Let us know what your would like to see happen and the MEGA team will support your idea.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time.

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him.

d> Can you mail me the LZHSHELL.INF file as I can't get it to work.
d> I can get lower case names, using unix-compatable, but any files
d> longer than 8+3 are truncated to '??????~?.???'.

Just a guess, but maybe he's using Freedom and you're not. Back when I was using Freedom, I found that I was able to use long filenames in many programs (e.g. Imagecopy) that normally wouldn't allow me to, using MagiC's built-in file selector. That is, with Freedom, I would get the long filenames, but with MagiC's fileselector, I would get the 8+3 versions.

Look around to various Atari dealers (Floppyshop, Systems Solutions, Systems for Tomorrow... they all post here eventually) for a copy of Papa's Graphic Guide to AtariWorks by Michael "Papa" Hebert. This excellent book gives a full description of the use of the word processor. The DataBase is pretty straight forward, and the Spread Sheet is pretty useless beyond the basics.

Hi,
I've got an Atari 1040 STF with an SC1224 atari RGB monitor and an
external 20 MB Supra hard drive.
$120 buys it all.
Everything works, and is in very good condition.
And yes, I have the mouse.
Also, the monitor has built-in speakers.

You also get 3 years worth of disks from START magazine, a few games, and
Mark Williams C compiler with manual.

Please mail me if interested.

ATARI ST Stuff for Sale

Two MegaSTï¿½s.. One MegaST4 and one MegaST2 (upgraded to 4 megs), both with T-25 accelerators that speed them up from 8 Mhz to 25 mHz, one with OmniRes which gives full screen in monochrome. One has switchable TOS 2.06/1.4 and the other has TOS 1.4.

Five monitors - 2 color and 3 monochrome, one of the monochromes did not work last time I used it. The other 4 are excellent.

Two Monitor Masters for easy switching from color to mono.

One 105 meg Megafile hard drive with Syquest and four 44 meg cartridges full of good stuff.

One 60 meg hard drive.

Spectre GCR (Macintosh emulation).

Supercharger (DOS emulation).

One Migraph hand scanner.

Extra mouses, joysticks, cables, power supplies, you name it.

One Master 3S external floppy drive, and one old 3 1/2 and 5 1/4 external drive that does not work.

A jillion floppies, manuals, books, cables, etc.

One NEC P6 24-pin printer. ($50 extra)

One Panasonic KXP2124 color 24-pin printer ($100 extra)

Software includes, but not limited to: PageStream, WordPerfect, Wordwriter, Silhouette, Touchup, Degas, Diamond Edge, QuickST, LabelMaster, MVG, Printmaster, Stalker, Calamus, NVDI, DidotPro, Interlink ST, PCDitto, Scanlite, LDWPower, Arabesque, AvantVector, Phasar4, Thatï¿½s Write, Outline, plus a TON of great games!!!

Iï¿½m asking $500 plus shipping for everything (see printer extras), and I live in Alabama.

Wesley Scarritt
scarritt@wwisp.com

Please respond via e-mail, as I rarely get on newsgroups... Thanks.

2583. New at Systems For Tomorrow (May 6th, 1998)

Newsgroup: comp.sys.atari.st
Date: 1998-05-04 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <6iprbbsna1@sunset.kansas.net>
Source record: 101534

New at Systems For Tomorrow May, 6th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~

Fontmania CD $15.99
While this CD is not an Atari specific disc, it does provide a wealth of fonts usabe by Atari owners. Includes: 1900 Adobe, 200 Calamus, 1100 CG Fonts, 300 bitmap GDOS fonts, 170 fonts as IFF pictures, 130 Pagestream, and 1400 True Type. Other font types that require long filename support are also included. From Weird Science.

HD Driver 7.51 $49.99
The latest version of the best Hard Disk utility software. Updates to v7.51 for owners of 7.x are only $5 for postage and handling. Send your origional disk to: SFT - PO Box 3034 - Independence MO 64055.

Delta Labs CD for TOS Computers
We have received new stocks from delta labs! These German CDs contain all kinds of goodies. Most contain some full versions, and though they are German CDs, English software can often be found. For detailed information on each CD go to http://www.deltalabs.com.

Whiteline Alpha $34.99
Whiteline Gamma $34.99
Whiteline Delta $34.99
Whiteline Omega $34.99
Whiteline PSI $39.99
Whiteline Linux/68k 2.0 $44.99
Whiteline Complete MiNT '98 $34.99
Whiteline all about Signum! $29.99
Whiteline Substance $34.99
Whiteline Transmission $19.99
Whiteline Selected Signs $29.99

Revolution CD Magazine
We now have limited stocks of the first seven issues of this German CD based magazine! Each issue contains German language articles and reviews stored in HTML format. Additionally each issue contains around 100 MegaBytes of Atari Software in various languages (including English.) Only $11.99 each, or only $49.99 for all seven.

Ultimate Virus Killer 2000 for TOS Computers $19.99
The Ultimate Virus Killer 2000 (version 8) is probably the most
~~~~~~~~~~~~~~~~~~~~~~~~~~

versatile and definitive product in the battle against computer viruses on the Atari ST/STE/TT/Falcon; a full- fledged tool that has taken many years of painstaking development. You can use this tool to de-infect your disks and programmes, destroying the viruses and leaving all other information and data intact. UCK2000 will recognize and destroy over 100 viruses! The full version is only $19.99, upgrades from any previous version are only $7.50 (requires the return of your origional UVK disk.)

Atari Computing Magazine Back Issues $9.99 each
Issues #4, #5, #6, #7 and #8 of Atari Computing are available by special order as back issues (while supplies last.) Back issues are shipped when the next new issue arrives. Order now to insure delivery with issue #9 (coming soon).

Atari Computing Subscriptions
In addition to our standing order option, we are now accepting 3 and 6 issue subscriptions to Atari Computing. Here's the deal: (Prices include Reader Disk and delivery to US or Canada.)
Standing Order: $11 per issue (must have a credit card)
3 Issue Subscription: $30
6 Issue Subscription: $55

Suzy B's Treasury Vol 2 CD $29.99
This CD from Suzy B Software continues the tradition of bringing you "a honey of a deal." It includes the best in Atari PD and Shareware, all clearly described by "The Unabashed Atariophile" of Z*Net, AEO and ST Report fame. It's been three years since the first collection and thousands of new files have arrived. Most files are compressed in ZIP format in order to fit more data onto the CD. We also have received more copies of the origional Suzy B's two CD set, now also priced at $29.99. Or take both volumes (3 discs) for only $47.98! From Suzy B's Software.

Link 97 for ST/STe/TT $89.99
Easly connect harddisks, CD ROM drives, streamers etc. to your DMA port. Technical features: SCSI 2 Commands (Harddisks above 1 GB can be used), Parity, SCSI Initator Identification (Harddisks like the Quantum Fireball series can be used), You can connect up to 7 SCSI devices. Note: Does not include driver software. From WB Systemtechnik.

Scan X: UMAX for TOS Computers $49.99
This new edition of the Scan X scanner drivers provides support for the UMAX Astra 1200s and VISTA S-12 scanners. A MicroTek E3/E6/35T+ version is also available. From Homa Systems.

Electronic Cow!
Three cool music applications! For more information check out the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
HD Driver 7 $49.99 The best Hard Disk utilities
CAB 2.5 $49.99 HTML browser /w PPP socket for MagiC
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

I don't recall if you're runing a multitasking system. If it's the case,
it's easy to load the POPwatch alias file in your text editor before
retrieving the mails, then add the unforeseen addresses in the file. Then
quit POPwatch and launch it again and there you go.

Hello All,
The problem is resolved. A couple of replys suggested that the problem
was due to a new version of TCP.STX namely V1.15 and I should go back
to v.1.10. I did and it worked. Yes I was connecting to the web but
angonizingly slow.
Thanks Charlie Bechler

You should contact the author of Big-DOS, Rainer Seitel:

Rainer_Seitel@ka.maus.de

Or use MagiC instead of Big-DOS.

The Falcon TOS supports partitions of up to 1 GByte. You probably didn't
have appropriate software to partition your drive and so you encountered
a limit that's actually not existing.

There is no limit on the drive's capacity but only on the maximum
partition size. This size depends on the TOS version. For TOS 1.0x its
256 MB, for TOS 2.0x/3.0x its 512 MB, for TOS 4.0x its 1 GByte. With
MagiC or Big-DOS the maximum size is 1 GByte regardless of the TOS
version.

Just to add something to this discussion. Have you ever seen the
StrongArm Processor Family? I remeber the old ARM with 40MHz
running circles around a P90 (the current PC processor those days)
The Strong Arm is now available at >400MHz. Acorn just anounced a
Computer with this chip a while ago.

There are loads of great Processor architectures around. I think
we should keep to oner of the Main Stream Chips like Atari did
1984 (the 68000 was the High end main Stream those days). Since
almost noone here likes Intel Processors I vote for the
PoverPC.

> available for this system?
>

Beware: MIDI is not AUDIO. These are two different things and lots of beginners get confused with this. There absolutely no SOUND involved with MIDI. MIDI is just digital signals that go describe what notes to play, how long to play them, and optionally what effects to be applied. AUDIO is recording of the analog signal coming from an instrument. Of course, the editing possibilities of MIDI are far wider than those of AUDIO. However, the ST cannot feasibly work with AUDIO, as this requires more memory and CPU horsepower than an ST can handle.

To hear MIDI music you need a MIDI-compatible sound source (expander, keyboard, PC soundcard, etc...).

Now, MIDI being a digital format, it is very difficult to record guitars in MIDI, as this requires a guitar to MIDI adaptor, that will convert the pitch wave coming from the guitar to MIDI signals. These things are VERY expensive and the guitar is a very expressive instrument, that does not convert well to digital. I think Roland sells one of these things.

Then, to play back the MIDI guitar, you would need a MIDI expander with very good guitar sounds. Actually I have NEVER seen a good MIDI guitar simaulation, as the sounds are very different depending on how you hit the strings. It never sounds right.

As a summary, I would say that it is unfeasible to consider converting guitar to MIDI.

What you could do with MIDI and a guitar set up however, is accompaniment. That is, use the ST can play drums, piano and whatever other instruments the sound module can handle, while you practice your guitar. There are midifiles all over the net for that, so you can cut the (usually crappy) guitar track and play along with the computer.

To do this, you would need a sound module (Yamaha or Roland both do decent cheap ones to pro high end ones) or a MIDI keyboard/synth (ditto) if you want to input notes, MIDI cables from ST MIDI OUT to module MIDI IN and vice versa, and sequencer software, or at least MIDIfile player software for the Atari.

If you want to simultaneously record the Guitar as Audio, you can either mix both together to a tape deck (cheap way, but live only) or get a digital MIDI + AUDIO setup based on an Atari Falcon or a PC/Mac if you want to edit the AUDIO tracks and MIDI simultaneously.

> Is it possible to pick up any of the stuff I need in the Toronto,
> Ontario Canada region?

Toronto is a large city, so I would be surprised if there were no music shops around.

Cheers,
Nick

Actaully I havn't tried 24 or 32-bit modes yet. Maybe I should.

Are those manuals in binary form or paper form?

>download or check my e-mail, I keep getting a 'password invalid'
>message - and consequently no e-mail.

If you exit mail processing unexpectedly (dropped line etc.) there is a 'lock' still applied at Zetnet's server saying that your box is being used. This gives rise to the 'Password Invalid' response when you try to access the mailbox again.

Some people have said that these 'locks' are removed automatically after 15 minutes of inactivity. I have found that the lock can persist MUCH longer. I often have to wait overnight before I can get access again.

I believe Zetnet will manually remove the lock if you ring their support line with details but this is a bit expensive to Lerwick.

>Does anone know whats going on?

I believe the theory but I think the practice is faulty i.e. Zetnet software does not remove the lock after a short period.

It's a nice little program to let your computer work like a full
blown sample player. It's very cool and works together with Cubase.

A complete music workstation in your computer.

On 4 May 1998 07:26:05 , Uwe Seimet wrote:
kevin dermott wrote:

> is there some sort of size limit on scsi/tos's/hosts ?

There is no limit on the drive's capacity but only on the maximum
partition size. This size depends on the TOS version. For TOS 1.0x its
256 MB, for TOS 2.0x/3.0x its 512 MB, for TOS 4.0x its 1 GByte. With
MagiC or Big-DOS the maximum size is 1 GByte regardless of the TOS
version.

i must have a problem with the host adaptors then

ie. the translator on the ste and the internal host on the mega ste

i have the link 97 0n 0rder

btw for me hd driver is the only one

Hi Dennis,

just found your posting about the logfile of Newsie this morning. Looks to me Newsie is corrupting this file (it looked like lines of a certain posting got mixed in between the Log lines...)

Maybe, just maybe it's another sign of Newsie corrupting data...
What you could try is:
1. Make copies of your OFFLINE folder to another partition. Also check the XOVER files, they should be plain ASCII.
2. Also copy the relevant set up files for Newsie and whatever you changed to set it up according to your liking. So a sig file, and don't forget the DEFAULT.GRP and DEFAULT.SVR files.
3. Check the regular Newsie partition for fragging etc. Maybe you should optimize the partition as well. Just in case, keep copies of the whole Sting and CAB bunch somewhere as well.
4. KEEP the old Newsie stuff just where it is. Say you got a folder "NEWSIE", then rename that one "NEWSIE.OLD" and next re-install Newsie from its archive to yet a new folder "NEWSIE". (This way the new stuff cannot overwrite the old stuff but takes up new space, it just may prevent things going wrong straight from the beginning).
5. Maybe the best is start all over again with this new set, so leave the old Offline folder somewhere else (you can always read those postings in any text editor and as far as I got the message, these postings got crisscrossed already).
In that case put the old Default.grp file back to where it should be, so Newsie can tell what the last postings you received were. (BTW: check this file too, it should be plain ASCII again, just describing the NG's you subscribed to with the last numbers you received).

Don't forget to create the new folders you had created before in the old set up; simply create the empty folders for it.

Put back the old prefs file and see what happens next.

No guarantee here, but it just may solve the problem.

BTW: I suggest when you do follow-ups on postings, at least you quote a line or two, so we know what you're talking about. Sometimes I'm having troubles finding out to what you are referring to... :-)

I sure hope your Internet Train will start rolling on *round* wheels soon!

I have got a problem with the mouse wich I suspect is hardware-
related.
Suddenly I wasn't able to move the pointer in vertical direction,
horisontal it's okay.The pointer either stops at the top or the bottom
of the screen.
I cleaned the mouse and I tried a couple other mices,but it was
the same thing.I checked for viruses,I tried different setups
including a totally clean,but there where no change.
Then I tried to bend the connectionplug when it was attached to the
computer and then the mouse suddenly started to work.And it still
do if I don't touch the plug or the wire ,if I do,the problems
starts again.
This applies to the other mouses to.
Is there a possibility that this problem can be related to anything
else but hardware(in the computer)?
And if it isn't,is it difficult and/or expensive to replace whatever
has to be replaced in the computer.I am not(as you probably understand
by now)specially experienced in handling hardware.
My set up is Falcon 030/Magic 5.13/NVDI 4.11.
Grateful for some advice.

2608. ST+ Fanzine STOS Corner + New STOS Manual

Newsgroup: comp.sys.atari.st
Date: 1998-05-04 00:00:00 UTC
From: Deano@zetnet.co.uk
Message-ID: <3552b92c.1082442@news.zetnet.co.uk>
Source record: 101639

Theres one thing I think about every time I create the STOS Corner for the Fanzine, that is...how many people actually read and enjoy it.

The next issue sees the start of a game creating tutorial and I wondered, with it being such hard work to create such a tutorial, would it be worth it.

Therefore, I would apperciate it if you could post your comments either to this list or direct to me at Deano@zetnet.co.uk

So basically I am asking.....should I keep the STOS Corner or should I drop it? After all, if noone reads it its a waste of time.

Also, if I wrote a manual like the Games Maker Manual by Stephen Hill which showed in detail how to write various programs like games, databases, art packages etc and sold it at a reasonable price would anyone be interested. If so, please send me an email with New STOS Manual as the subject, and if enough people show interest in purchasing such a manual then I will write it.

Yours Faithfully (In a very Silly way)

I guess the super disk drive is meant.
AFAIK these are 120MB changeable media drives backwards compatible with
normal 1.44MB floppy disks.
I think they are only available with IDE port.
Don't know whether or not you can attach it to IDE-ATARIs...

Yes, good guess. I'm using Freedom 1.15 (not the latest version though
as I have probs with it on the Hades). I really don't have troubles to
compress/uncompress long filenames files. I uncompress archives which
I know they contains long filenames to a minixfs partition. I'm not
using MagiC but N.AES/MiNT1.14.7/Thing v1.20

For those of you who have not seen the best disczine around Click on the links below and get disc 1 and 2 or issue 2 of MEGA DISCZINE.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't.

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it. This would be a great shame as there is now other zine like it.

So come on, Lets have some feedback, I want to make it YOUR zine, Let us know what your would like to see happen and the MEGA team will support your idea.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time.

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him.

I have issue 2 ready for E-mail should you dare to ask for it. Sorry but it has not yet been added to my site, Keep trying though !!

Here are the URL's for issue 2.

Well, I must have done something right! I was even able to
use the web viewing fuction of Newsie today, something else
that hasn't worked for me.

Now if I can just figure out the works of the FTP stuff.

BTW, I'm running STinG 1.08 and the Dialer is 1.15, so who
or where can I FTP 1.15 of STinG from? and also Newsie .88?
or as the decoding seems to work now, e-mail them to me?

Now maybe I can get CAB to work? na, to much to ask for in one
day!

In Freedom you have to set the info file for long filenames to show
them. And you will have expand them to vfat partition etc.

The loaded image in IconsCons _is_ there all the time, too. What I do is create a bunch of 'New' icon slots and then jump back and forth to the loaded image ('Show Image'), clipping away using the 32x32 box. After this comes a masking session using the auto mask feature. Each new icon still takes many mouse clicks to finalize, but certainly not as many as ORCS would require. For me, IconsCons is far from cumbersome in comparison to ORCS. Maybe you're using an older version of IconsCons? The one I'm using is v2.1 (as bundled with Ease 4).

> From what you're saying here it sounds like "Iconcons" will make a RSC

> That can't be right, or can it? (it would save me a bundle of time if it
> only was so!).

Perhaps you're looking for a magical tip here. No magic, though -- just save out of IconsCons as monochrome RSC. So the answer is "yes", IconsCons will make a RSC file out of a screengrab <g>.

2622. Re: Real Audio

Newsgroup: comp.sys.atari.st
Date: 1998-05-05 00:00:00 UTC
From: look@my.sig
Message-ID: <354f7b26.3510076@news.wavetech.net>
Source record: 101453

> Is there any way to play Real Audio on a humble STE.

Nope. RA is secret, and if RA is anything like MPEG, I doubt an ST has
anywhere near the needed CPU power to be anything close to realtime
anyway...

So RA isn't gonna happen, but why not something else? MPEG is possible,
there's already an MP2 player for the Falcon, seems it would be trivial to
hack it to play real-time off the net... Or has someone done it already? :)
It would be an interesting to port mpg123 to the ST. Experiments with
running mpg123 on a 386sx16 weren't too encouraging, I tried it with some
custom 8kbps MP3s, and it was really* slow. I don't think an ST has a
chance at realtime... :P I suspect something with an FPU would help quite a
bit... Using MP2 may help too. Anyone know where to find an MP2 encoder?

Hey all you Linux m68k users, grab a copy of mpg123, I'd like to know what
the minimum CPU is for playing low-bitrate Mpeg...

Guess I'll have to set up my test MP3s on a web site...

I am gearing up my programming tools. I found a very nice GEM grep tool on one of the Berlin sites called FSEARCH. Not too big, works pretty good.

Now I need a good diff tool. The MiNT diff version (or rather the TOS programs that accompany the MiNT versions) work well, but obviously expect to be used from within a shell. Not that I'm extremely opposed to shells, but it's fun (and somewhat challenging) to do as much as possible from GEM. And how do you redirect output from the TOS Takes Parameters input box?

How long are the lines you're talking about? I have no problem with VT52
wrapping lines, but I don't think I've ever had it have the need to wrap
excessively long lines.

Have you tried all versions of Mega STEs ? I doubt that you tried more than
two or three machines, probably all of the same version ? There is half a
dozen different versions of the motherboard, and PAL contents have changed
too, and definitely some of them have a flaw that corrupts binary downloads.

I guess you have no idea what the modem LEDs actually indicate ? There
is an On Hook / Off Hook LED that indicates precisely this, it's usually
labeled "OH". "CD" tells about the same.

Maybe you should dig out your modem manual and do a little reading ? ;-)

: the mouse socket attaches to the PCB.

It might also be simply a broken wire in the mouse cable, this usually
happens near the point where the cable enters the mouse, and it's easily
fixed by shortening the cable a little, having cut off the part containing
the break.

What restrictions have been removed, Martin?

t> Boxkite is another shareware fileselector which can handle long
t> filenames without any problem. It must be on the Belgian ftp site
t> also.

Yes, it's in the same directory on the ftp site - I've found it now...

h> program to be found anywhere?

Following Martin's comment that some restrictions had been removed I translated the update info from v2.02 to 2.04. It didn't mention anything about less restrictions, but seeing as I did the work I may as well post that info here. It looks like there are some significant bugfixes in this version (with more still to be done...). Apologies for some of the poor translating work here - it was very rough...

Liberty has been upgraded from v1.15 to v1.30.

Alterations version 1.20

• At last Liberty works correctly together with NAES. What was the cause?
Na ? - The Swine-program handling. (?!)
Without a phone call from Rainer Mannigel (NAES-developer) the thing would probably never be realised. Through it I have learned of an NAES internal thing and that makes it possible for me fot Liberty it with it.
I hope that now I won't have to handle the Swine-program-handling part any more... ;-)

Alterations version 1.30

• I can't understand it. Dirty applications bring me sometimes once more around the reason. In this version I have DEFINITELY carried out the last alteration on the Swine-program-handling part. A special handling for MTOS/NAES and MagiC should now bring maximum compatibility with untidy programs too. Among other things older versions of MGCOPY, MGVIEW etc gain through it too, in that what the clean-ness of the System-bindings anging, still weren't so well-rounded. The current Swine-program handling-routine is definitely wisdom's last word!
In that OAESIS doesn't offer a sensible appl_find(NULL), but makes a proper bollocks of it, I can't recommend OAESis. It is practically impossible to make Liberty&Freedom2 to run unproblematically under

OAESIS. I can't make comments on GENEVA and XAES.
IMPORTANT: Liberty works correctly under MagiC, as long as the MagiC-version >= 3.X. Essential!!!

• Owners of computers with DMA-Sound ((Mega)STE, TT) now at last have the benefit of using the Liberty sound functions. Next to Macs with 'MACSOUND' and Falcons comes with these computers now too the joy, if you click on the big Freedom logo in the Freedom2 Info-Dialog... (if the software of the Startrack-card for the HADES also uses a 'McSn'-Cookie (does it? Who will tell me?), then HADES-Users will also be able to hear...)

• Further programming docs for Liberty have been integrated into the Docs.

• ...and always still a great deal to do...

```
Freedom has been upgraded from v2.02 to v2.04

D.2 version V2.03 ("...unfortunately always more difficult errors...")
=====================================================================
```

• On the grounds of its unattractiveness, difficulty to interpret as well as lack of stability (certain characters could completely jumble up the config-interpretation very nicely) I've swapped the 'Fuller', 'Closer' and the upper and lower arrows for vector icons. (The main visual change in F2). Doing that the configurability of the symbols reduces through the Config-eCPX. (it's still configurable but nevertheless... (I'll tell you another time...))

• With some Freedom2 dialogs the look of the input fields is not right (eg. with the Object info). Corrected.

• The USERDEF-Stack has been extended again because it gave problems with PCI-Macs. The Stack has now grown from 3,2 to 4kB. If problems should still occur (screen report), then please report it to me. Without a PCI-Mac I can't test it.

• Config-CPX: Whether the Autolocator distinguishes case-sensitive or insensitive with drives using long filenames is now adjustable. (Thanks a million ;-))

• Freedom2 now sorts filenames and file endings independent of upper and lower case initial letters. Consequently, on case-sensitive drives, the file 'ABC' should now be placed with the file 'abc', irrespective of whether files with other initial letters exist. Over the large and small initial capital letter sequence is decided the physical sequence of the files on the partition. That is also valid for the Extension-Popup and directories.

• Freedom2 should now be able to cope better with MiNT Memory Protection. That is, among other things on it to trace back, that vector bending eCPXs are now loaded into global memory (e.g. WindScreen). From

there absolutely too the enclosed eCPXs new install!

• New 'Liberty' version enclosed. Freedom2 now runs properly with it under N.AES as well.

```
D.1 version V2.04 ("Na at last.... ")
====================================
```

• The most terrible error found that, since the first release of Freedom2, the correct saving of the configuration of drives with long filenames was prevented (Header: LIBERTY E-f-int). For users of file systems with long filenames a lot of 'inexplicable' errors should now be a thing of the past.

• A decent looking resizer built in. Of course the object below right is a vector icon...

• The 'Finder' (the search program) can in fact be configured, but in operation the magnifier was not being called. Until somebody pointed it out it took a long time to find. Very few use this. As always, that's how it goes!

• USERDEF-Stack extended. I hope the PCI-Macs with almost 8k :-(stack finally keep quiet! Freedom2 is already 4k bigger because of it.

• New 'Liberty' version enclosed. See 'Changes' in Liberty... (...it's had several things done to it!)

• An ancient bug eradicated:
The eCPXS of Freedom2 could actually be found with 'APPL_FIND' up to now, but not with 'APPL_WRITE' messages received (as it really should). L•ppt nu!

• The eCPX 'Trouble Bubble' is now at version 2 and understands the 'BubbleGEM' protocol! (Take a look at the 'Trouble Bubble' part of this documentation).
Also some details and the look of 'Trouble Bubble' have had some changes.

• At the request of many people the documentation was over-long. Particularly, the description of the format strings was missed. It can now be found in the appendix.

• To me there are still some well-known errors (nothing terrible!), but then I think the above alterations are already worth a Release, so I submit this intermediate version (still without a character set dialog CPX).

```
..to be continued...
```

HS> elsewhere).
HS> I should be using ftp://193.190.205.13 and directory /archive/atari/
HS> shouldn't I ?

As it turns out, no. I dumped the initial bit (ftp://) and just left it as
193.190.205.13 and it worked first time.

I'll get the hang of this one day...

d> Thank you Martin ! This is exactly what I was looking for :)

Note that the Edge patch upgrades any version from 2.00 onwards, while the DB one patches from about 3.50.

Seperately, there are patches for DB that take 3.xx up to 3.14, but to get from 3.14 to 3.5 you'll need to go back to your distributor - Hisoft for those in the UK.

HS>> I've completely lost track of this issue... B^{<
o> Yes, that is correct. And if you have an 030, use the 030 version.

Well, I've checked things out at last and tbh I'm surprised I had things
going as well as I did!

I had the 1.27xx version in the Modules folder of CAB v2.5 and the 1.28xx
version in with a copy of CAB030 v1.5 which I use sometimes - I didn't think
the latter was supposed to work at all!

Anyway, I've rationalised down to just the 030 ersion of v1.29xx with CAB 2.5
so things should improve greatly now, if I'm to believe all I hear. I have a
particular site bookmarked which'll test it... <g>

HS>> Along the lines of what Steve said, I use 1:25 timeslices here, but

Bertil,

I had the exact same problem with my TT - it is caused by the pin connections from the mouse port on to the circuit board of your computer. After sometime and many connections/disconnections those pins can loosen, causing hair line cracks in the solder joints. It is an easy fix if you have a pin-point solder gun (30 watt max). Heat the joints and flow a little new solder into the joints making sure the pins are hot enough so that you do not get a rosen "bubble" between the joint and the pins.

Jo,

The drivers with the latest version of Calamus handle A3. FWIW, if you have an older version of Calamus (mine is 10/94) they will work. I got them from the demo version that is posted at the Invers web site. I am also going to upgrade now that the English version just became available.

As others have said, "Grep" is what you want. It's unix originated command line program, but there is a MiNT compiled version. I won't guaruntee it, but I have a feeling that at least one of the "meant for MiNT" versions tuns okay in a CLI under single TOS.

Keep an eye out for grep variants - Fgrep (fast grep), Agrep, Egrep, etc.

But probably most useful to you would be to search the FTP sites for Grepit. This is a GEM version of grep.

If you want C and D to apear on the desktop, then you just have to "install a new drive" 2 times (for C and for D) from the right hand menu (first line if I remember well). It is possible that this option is available only if a drive icon is selected.
After that, you'll have to "save the desktop", still in the right hand menu (last line this time, seems to me). Then everything will be in your DESKTOP.INF.

> it is possible to Boot from the Hardisk like on Amiga and PC ???

That's another problem. Yes, it is possible (I boot from the HD myself), but I never managed it with Atari tools. Let me know if you're interested in the tools I have (I don't even remember the name of those). I would then e-mail to you.

Hello Dennis, The Shadow of Shadow SoftWare gave me some good advice. I just wished I would of taken it before I registered ForeSight BBS.

Try getting your BBS SoftWare up and running before you Register/Buy it. If your happy with it the way it is, that's much better than the promise of future support. Their's BBS Software available on the Web. Try the University of Michigan on the Web at:

www.umich.edu/~archive/atari

look in the Telecomm Directory.

==Thanx==

Nope.

>
> If not,is there any way to convert R/A, to a format like WAV which I can
> play.???

Nope.

RA is a proprietary format and the owners are keeping the secret of how
it works, since it's an audio compression algorithm and these things are
pretty hard to crack (try reverse engineering the MP3 format). Even on
the PC there is no way to convert RA to WAF, AIFF or whatever.

Sorry.

Oh I see. I'd never heard of them being called "super floppies", I've
always seen them as LS120 drives.

> normal 1.44MB floppy disks.
> I think they are only available with IDE port.

Yes they have a dual connector, one for IDE and the other for the floppy
port.

Anyway, there's not much point in using these when we can use ZIP
drives, CD-ROMs, SyQuests and hard drives.

> Don't know whether or not you can attach it to IDE-ATARIs...

Probably not. at least not easily. this things need special treatment
(what if the LS120 is declared as D: and you try to copy from logical
drive A: to D: ?). On PCs the BIOS is involved in dealing with this sort
of thing.

Cheers,
Nick

Well, I'm afraid Atari is able to support much these days, since they're
dead.

>
> Anyone have docs they could mail me? We would really appreciate it.
>

Try B&C or Best Electronics for old Atari parts such as manuals.

However AtariWorks is famous for being pretty bad anyway. If you just
want word processing, Papyrus is the recommended modern program.

Cheers,

Future version of HDDRIVER will support these drives (LS120). Currently
I have conntected such a drive to my Falcon's IDE port.
Note that TOS won't be able to boot from such a drive even if a floppy
disk is inserted. This is because TOS doesn't support ATAPI devices.

No, the host adapter has no influence at all on the partition sizes.
These limits only depend on the TOS version and the parameters used for
partitioning but on nothing else.

Most simple! disks can be accepted by both Atari and PC without any special program to read or write. Just be careful when formating the floppy disk:
- On a PC, format it with the size 720k (that is double density - DD) and everything will be OK.
- On the Atari, some say you just have to format with the desktop. I had problem this way so it is better to format in MS-DOS style. There are many ways to do that, one of which is Fastcopy (I can e-mail it to you if you want).

Thus formated, you can use the disk on PC and Atari BUT I had some problems with folders. When creating a folder on the PC, it's OK to use it on the Atari, but when creating a folder on the Atari, the PC sometimes couldn't read it anymore, so I advice you create folders on the PC.

One more thing: If you use Win95 or more, try to keep files with names like DOS (8+3). It doesn't do any harm with longer names but the resulting real file names on the disk are a little bit strange.

> Is there a way to download programs meant for Atari emulators on the PC
> and transfer them to a real Atari?

Oh yes, there is :-) because Atari is not dead and so far, programs are not made for emulators but for real Atari (and clones). Since files are readable on both PC and Atari (see above), you just have to get the files you want on Internet on your PC, copy the files on a floppy disk and use the files. That's all.

But, say, is your PC connected to Internet? Yes? Then you have access to it at home. So you can also connect the Atari to Internet (but it will be slow, your Atari is an old one...).

Gee boys and girls, I hate to spoil the fun, but I just found out that grep
does NOT search over line ends. As I thought, grep searches for a string
in a collection of files on _line-by-line_ basis. Normally, this should not
be a problem for simple strings, but for strings with a space or smth, it
won't always work.

2665. help: "BSD-like init 1.3"

Newsgroup: comp.sys.atari.st
Date: 1998-05-05 00:00:00 UTC
From: Yves Gablin <yves.gablin@imag.fr>
Message-ID: <354ED9D3.794B@imag.fr>
Source record: 101566

Hello to all,

When I run init 1.3 (MiNTOS) with MiNT, the screen looks weird (I quote
from memory): "

BSD-like init 1.3 ...

/pipe/log file not found

@log%$:#

". I replaced the greek letters 'alpha', 'beta'... with anything on my
keybord, it's just for you to see the general aspect. To put it in a
nutshell, the link between the keyboard and the screen seems to be
somehow altered:
l is still l
o is still o
r is still r
...
but
a becomes 'alpha'
b becomes 'beta'
'CR' becomes f
...

And there is this /pipe/log file...

Any idea?

yves.

Using a 720K double sided DD floppy should work, if formatted on the PC.
Use a real DD floppy, not a HD one formatted to 720K.

> Are there programs on the pc that can copy from Atari disks?

Yes, Windows 95. If you have trouble, you can use a little DOS program
that messes up the TOS boot sector to make it readable by the PC. DO NOT
USE IT WITH GAME DISKS. It's in the Quick FAQ.

Most modern PCs won't read the old single sided disks.

> Is there a way to download programs meant for Atari emulators on the PC
> and transfer them to a real Atari?

Those programs are usually pirate stuff, so it's illegal to use them.
They are disk images and on most of the sites where you find them,
you'll find utilities to convert them to .MSA, then you can use MSA 2.3
to make real disks out of them on your ST. If you've found the games, I
can't see why you couldn't find the utilities.

ROTFL!! C'mon, Dennis, you've had your little joke now. Things can't
REALLY be as bad as this (can they?).

This xover is absolutely no good to you. You may as well delete the
whole contents of this newsgroups folder and allow Newsie to make a
fresh start.

To me it looks as though there is absolutely NO synchronisation
between the h/w (your modem port) and the s/w which is reading from
it.

I remember you said you were having probs. convincing SERIAL.CPX of
the settings you wanted for your port. Perhaps you should concentrate
on this for a while (if you can bear it!).

Greetings (yeah, it's me again) atarians!

I have recently heard some rumours about the desktop Thing, saying that there is a version 1.22 out somewhere. Is this correct? If so :

* Is it for betatesters only?
* If not, is it available for download?
* If so, where can I get it?

I'm also wondering if the newer versions of Thing ever will be available in a non-german language? (english)

The only thing that keeps me from registring Thing 1.20 is the fact that I really can't stand working with the german version. It is an excellent piece of software, and I think it is unfortunate that it still isn't available in english.

Well, I guess that's all for now! Thanx in advance!

Source record: 101573

Does Cubase and Notator come on 360 K or 720 K disks? Where can I get them in the Toronto , Ontario area? What are other good shareware freeware programs to get started with MIDI?

My problem is I have an Atari 520 which I upgraded to 1 Mb, unfortunately the floppy is still a 360K. Are the floppy drives in the Atari's standard floppys, can I just buy a 720 and install it?

thank you in advance.....

The best ones are Cubase and Notator, without a doubt. The shareware sequencers do not compare IMO. You can have a look at Alchemy or Sweet 16. I don't remember the URLs, but have a look on most FTP sites.

You cannot possibly consider serious working on an ST with a single sided floppy. You will NEED at least a double sided one, even if only for transferring files from a PC.

> My problem is I have an Atari 520 which I upgraded to 1 Mb,

1Mb is a bit short for Cubase, it will run, but some functions will be disabled. I don't know about Notator.

> unfortunately the floppy is still a 360K. Are the floppy drives in the

You can use a PC floppy drive quite easily. It's all in the Quick FAQ. Check out my .sig.

Cheers,
Nick

But ghostlink can be a lot less work: just drag a folder or two from one
GEM window to another, and then go down the pub while 379 files are copied
over a 19200 bit/s link. Hic.

>> drive since i removed the defective internal drive.maybe it's the cable
>> cause i get the same' no drives attached prompt' with the cable and drive
>> attached or not???

The Falcon doesn't care at all if you have the IDE or not and there's no jumper for it. You're able to boot on SCSI or IDE, whichever you prefer - but if booting from SCSI, I believe it's best to set the drive to SCSI ID#0. Make sure that you have the termination right in the SCSI-chain (if you only have one SCSI-drive, there should be a termination on it). The bootup time will be longer without the IDE, but everything should work without any problems.

Best regards,
Claes

Just a bit off-topic, but as long as the case
is going to be open, you might investigate the
version of TOS running in your machine to
determine whether it would be worthwhile to
upgrade. Sometimes you can get a "pricing deal"
if you perform two tasks at the same time while
the cover's off.

Just a thought.

Hello,

It seems that, with Interface 2.21, saving a RSC file bigger than
64�ko causes 2 bombs when saving the related *.H file.
Has anybody already encountered that ? Does anybody know if the 2.3
version corrects that, or if any solution exists ?

Thanks,

Well that is what it looked like, so I took someones eles's advice, I made a temp folder on another drive, then I copyed ALL of C: drive into that folder. I then used HDX to zerro out that drive and to map any bad sectors (NONE!) I then moved back ONE by ONE each and every file!!! and tried a re-boot of the system. NO HARD DRIVE!! So I dug out my HDX on floppy and ran the install again, Now when I reboot I get the Atari Hard drive, the ICD boot (I have a 125meg scsi via icd host on the DMA port) all the rest of the files from my auto folder and then for a 2nd time the Atari Hard Drive driver runs! BUT! now I don't have to hit reset like I did before to get the floppy drive to show up like I did before.

Can you say 'Strange System'? Anyway for resons beyound my figuring out, over 300k of e-mail came flooding in today!

I will do a bit more testing today.

Who knows maybe that old mfm drive I burned at the stake last
night as an offer to the Big Atarian in the sky might have helped?

2685. Help with a PAK030 Board

Newsgroup: comp.sys.atari.st
Date: 1998-05-05 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <6inmn4gvr1@news1.Radix.Net>
Source record: 101586

Hello!

I picked up 2 PAK030 boards from Toad Computers not too long ago. Unfortunately they lacked any drivers or docs. I wish to put one of them into a Mega STe, but need some guidance. Any FAQ or text document I could look at for help? Anyway, here are my observations from the card that looks most promising to work:

All sockets on the board have ships except the M68k socket, the MathCo socket, and CON1 (where the FRAK goes????). The CPU is a Motorola SC414075RC50 (50 Mhz 68030 w/MMU?). The crystal on the board looks like it is 32 Mhz (9408T XO-105BIC .32.000000MHz). The chips with labels are P4_50, P2_50RST, P3_PUK (A gal to allow a switch between the 68030 & 68000?), and what I believe are the TOS Chips, 306E_U10, 306E_U11, 306E_U12, and 306E_U13.

THe following jumpers are empty: J11, J4, J3, J6, J1 and J2.

J7 ++O J5 ++ J9 ++O J10 ++O J8 O++

The board is connected to a PU_STE V.2 made April 1995.

Also, what do I need to do to add a math coprocessor?

Thanks for any help!

Keith

2687. MagiC's VT52 crashing

Newsgroup: comp.sys.atari.st
Date: 1998-05-05 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <29376423_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 101588
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

I'm having problems with a .TTP program that I've written when it runs in MagiC's VT52 window. Every so often it crashes and the VT52 program then hangs and has to be killed.

This seems to be related to the length of lines being output, but I'm not sure.

All my program does is a Cconws of a string, and I suspect the problem is actually not my program, but VT52.

Does anyone know if this is a known bug in the VT52 program, or could it be something I'm doing? If it's a bug, does anyone know if there is a more reliable replacement for VT52 under MagiC?

Thanks for any help,
Gary

Re: "AutoSurf module in Cab", Harry Sideras scribbled the following on 05 May 98 @ 04:13:58:

HS> What about the CABOVL.CFG file? Do you have one? What's it set
HS> to? If you don't have one, takea look at the default...
HS>
HS> # SHARE_TIME
HS> # amount of time in msec that the OVL returns to CAB during the
HS> OVL's # operation. Like all GEM calls this is the minimum time
HS> returned. # It's Default value is 100 msec
HS> #
HS> SHARE_TIME = 20

Oh yeah, I forgot about that. I'm using 20, which I suppose is what was originally in the distribution config, though it says the default is 100. I don't completely understand the keyword, but that could definitely be the problem with foreground slowdowns. I'll have to play with it a bit and see what happens. Thanks.

Hi Michel,

probably a different MAGIC.RAM, one for a german keyboard lay-out.
If you don't have an Atari with "german keyboard" you need to fix that (get
another MAGIC.RAM that is).

>what can be the cause and how to fix it?

Oh Lawd, this old bug again. You had it with version 5.1 as well, I presume?
IMHO it's the result of some older programs not being compatible (enough) with
MagiC. Whenever I started with MagiC I had the same problems. It's more or less
a matter of sorting out which programs do run decently with MagiC and which
ones don't. In my opinion it's the weak point of MagiC; bad memory management.
Another thing connected to it is the message running out of internal memory.
This can be overcome by installing one or more ADDMEM.PRG's in the autofolder.
I think I've got 3 in there, and ever since that message dissappeared from my
set. It's like the old 40 folder problem with TOS.
BTW, whenever you get this "speicherblock etc." message on your screen, I found

the best solution was an immediate reset, don't bother answering the questions with Y or N, because in my case, the system always went bezerk doing so. Best solution is CTL-ALT-DEL...

>3. when i click on a url-address in ash-emailer, can i tell thing to

>no
>explanation or example of how to fill it in.

Yup, it looks like a lot of programmers think we're all programmers...
I'm not familiar with ASH-emailer but I think first of, it should be a "setting" in this program. AFAIK you don't need Thing in between, it's like the feature in CAB, when you click an e-mail adress, you go straight to your E-mail program when set so in the configs.
Well, come to think of it, you probably do need Thing as your AV-server (or any other program capable of doing so). Need to define Thing as your AV-server in your Magx.inf then...

Surely Newsie do some strange things with the harddisk. Since the day
I stop using it I never have had problems again.
A few day ago I've used it once more to help someone who had some
troubles. And guess what.... Lost clusters. For some reasons Newsie
has screwed up the log file.

BTW: Mymail is a great program indeed. It's getting better every day
only I wished I could use it to retrieve my mail when I use
MiNT/MiNTnet. Some mails just can't be retrieved.
With STing (which I only use in rare occasions) however everything
just go fine.

I have seem some postings about V1.22 in Mausnet. I can't remember me
the discussion but I thought the author said that this version should
be available at the TOS4YOU fair (Last week, Germany).
I can be wrong though.

This I would like to know also. In the past I've send a few e-mails to
MAUS people but never got an answer back. According to a German guy
this should work without any probs but in view of my experience I've
my doubts.

On the Belgian ftp site
193.190.205.13 archive/atari/utilities/file_selectors.
Maybe it's still on the incoming dir. Look for fredm204.zip

I think it's on ftp.cs.tu-berlin.de pub/atari also.

If you can't find it mail me and I'll send it to you.

In the incomming dir? I also work once in a while, when I'm not studying
(that's how they call it, I guess) or sleeping... ;)
I've put it in the /utilities/file_selectors dir some time ago.

>is a good idea.

Aha, I presume this is the same problem I'm having. A lot of file attachments sent to me decode without any apparent problem but when I extract them I get CRC errors all over the place. A check with Diamond Edge revealed hundreds of lost clusters and in my experience the problem does not spread beyond the partition where Newsie is installed (for a while I thought I had a corrupt partition so moved it but the problem followed). I have to regularly fix disk errors in between using Newsie (haven't tried the latest version yet). It's a pain, but I just thought, if you're getting CRC errors when decompressing archives in your mail box, try copying the actual mail (look where your mail is, lots of MAILnnnn.TXT (where n is an integer) files and you'll recognise file attachments because they are much larger than the rest) to a healthy partition and use the TTP programs to extract. It would seem the corruption problems arise from the action of old mail being deleted and when you extract an attachment within Newsie somehow the system is blindly dumping data and not skipping bad sectors (hence CRC errors when you try to decompress?) You get the idea...

Hi

You should be running magtorom.prg strait after magigboot if you are using an 030 or 040 or 060 based machine. This stops programs from affecting magic. Area of ram. Also make sure the the installer did a proper install the last time I did an update it did not install the all the new programs.

Once the magic ram has been updated to the new version the rest can be manually copied to make sure theat it was all updated.

Good luck.
Regards

2702. Mint & AES Problems

Newsgroup: comp.sys.atari.st
Date: 1998-05-06 00:00:00 UTC
From: nameerf@flash.net
Message-ID: <6iqlph$o32$1@excalibur.flash.net>
Source record: 101403

Hello!

I've been trying to set up Mint with an AES, and no matter what I do, I keep getting errors when I try to run software from the desktop. My Falcon didn't come with MultiTOS, so I've been trying to set up my own. I've used the KEMD/KGMD kit to set up Mint, however I don't feel comfortable as yet with Unix text commands. So I've tried to follow the KEMD instructions to set up an AES, but there were a couple steps that I couldn't understand, and therefore failed in every attempt to get an AES to run. I then turned to the AES's instructions on how to install it with Mint, and at least got it to run, but now I'm stuck with not being able to run software. I've tried AES 4.1, Xaaes versions 6 and 7, and the latest Geneva demo. All have the same problem.

Would it be possible for someone to create a sample MINT.CNF file that only instructs Mint to run an AES with a desktop? Specifically, I'd like to run Mint with Geneva to get a Pre-Emptive version of Geneva, with NeoDesk 4 or Thing as my desktop. If I could get a sample MINT.CNF file that makes Mint work correctly with this, I could take it from there, I think. Thanks in advance!

From: kdermott@zetnet.co.uk
Message-ID: <6iqmeqtjd1@roch.zetnet.co.uk>
Source record: 101404

hi all just to put the record strait.i have been trying for ages
to connect a stacy /mste to external drives using the "translator"
host and messing with ribbons inside

i have been advised {and passed the advise along} that both have two
seperate busses internal and external and that these could not mix

the internal hosts only seem to support one device and appear to be
blind to drives bigger than 1 meg

the translator host used on a standard ste could only see and partition
1 gigs worth of a 2.1 gig drive

my last advise was from a guy using the link host and doing just what
i was trying,

i bought the link 97 and everything works fine,which also answers some of the
the question of two hosts on the same line

i hope this saves someone else a lot of head banging

all this testing was done with hd driver versions 4/6

They're not excessively long, just longer than the number of columns defined
in VT52.INF. This could of course be a red herring. I was kind of hoping
someone else had encountered this. :(
I still haven't worked out a pattern for this crashing. Sometimes it doesn't
crash but simply hangs.

From: jperez@Hawaii.Edu
Message-ID: <6iqru6$2k5@news.Hawaii.Edu>
Source record: 101410
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Greetings,

I am wondering whether anyone has considered adapting one of the MAC SCSI->Ethernet adapters for use with the Falcon. One that I saw reviewed was the DaynaPort Pocket SCSI/Link, and it would seem that all that would be necessary may be a micro DB50->DB25 adapter, and of course, someone would have to pen some drivers ;)

: couple steps that I couldn't understand, and therefore failed in every
: attempt to get an AES to run. I then turned to the AES's instructions
: on how to install it with Mint, and at least got it to run, but now
: I'm stuck with not being able to run software. I've tried AES 4.1,
: Xaaes versions 6 and 7, and the latest Geneva demo. All have the same
: problem.

: Would it be possible for someone to create a sample MINT.CNF
: file that only instructs Mint to run an AES with a desktop?
: Specifically, I'd like to run Mint with Geneva to get a Pre-Emptive
: version of Geneva, with NeoDesk 4 or Thing as my desktop. If I could
: get a sample MINT.CNF file that makes Mint work correctly with this, I
: could take it from there, I think. Thanks in advance!

: Mike Freeman
: nameerf@flash.net

This works with FreeMiNT 1.14. There are some configuration
issues in the AUTO folder.

```
# MINT.CNF for using Geneva with MiNT
#
#GEM=c:\geneva\geneva.prg
#
# If you already have GENEVA.PRX in your AUTO folder, try this instead:
GEM=c:\auto\geneva.prx
SLICES=6
SECURELEVEL=1
BIOSBUF=no
#
#setenv TERM vt100
#
setenv TEMP U:\tmp
setenv TMPDIR U:\tmp
setenv SHELL u:\bin\sh
#
ren u:\dev\modem1 u:\dev\ttya
```

```
#
# These are on the TT only.
#
ren u:\dev\modem2 u:\dev\ttyb
ren u:\dev\serial1 u:\dev\ttyc
ren u:\dev\serial2 u:\dev\ttyd
#
# pour CoNnect et serial.cpx de sting
#
sln u:\dev\ttya u:\dev\modem1
sln u:\dev\ttyb u:\dev\modem2
sln u:\dev\ttyc u:\dev\serial1
sln u:\dev\ttyd u:\dev\serial2
#
CON=U:\dev\fasttext
#
# end of file

Seems like Freedom is the deciding factor here. I'll try installing it and
see if it makes any difference.

Selectric is great. I just wish it supported long filenames. Alas, I'm using MagiC's weak built-in file selector.

Nope, I use Net2Net several times a day and it often gives lines longer than
the 80 columns I have defined.

Here's my settings:

Terminal...

Columns: 80
Rows: 25
Buffer: 0

[X] Buffered output
[ ] Input line visible

Timer-redraw after: 500 ms

Program Termination...

[X] Close TOS window

(*) VT52 becomes untopped

Font...

8 point Monaco Mono

If you want me to test your program on my system, you know where to find me.

Tony you're talking a lot of bullshit. You start up Windows and have loaded
several megabytes of code into the machine and you find it looking neat
(whatever that means for you), but you refuse to load an alternative desktop
into your Atari that is only one or two hundred kilobytes and that would
give you all you ask for : Colours, background pictures, all sort of different
icons on the desktop, whatever. What's more, you blame GEM for your refusal.
That plainly ridiculous.

> Now I know that If I had a Hard drive and a better os perhaps and all

Wonder what your Windows machine looks like if you take out the hard disk.

Tony, please compare things that are compatible for comparison (i.e. machines
that either both, or none, have a hard disk, for instance).

Otherwise, shut up.

Cheers Peter

I very much doubt that that would be the reason. STinG might drop correct
packets due to some bug, but since there are checksum checks all over the
place, the result would be much different. Basically, data would not arrive
at all in such a case, the connection "hanging", or being excessively slow.
It's all the mechanisms in TCP that ensure this.

> In the STinG Dialer(Statistics) check to see how many dropped packets your
> getting after an online usage. Check Modem 1 or 2 that your using. You

You know many Mega STEs have that bug in the Modem 2 hardware that corrupts
data. This does *not* lead to the situation that the application would get
corrupted data, but the connection appears to be hanging as corrupted data
gets thrown away.

If there arrives corrupted data at the user interface of some application
it's 99 % sure the application at fault.

> My best guess is that you don't have STinG optimized for your ISP.

Again this cannot cause corrupted data to arrive.

Cheers Peter

John, I remember Gary talking about some POP servers sending malformed
e-mail to the user. He found that when working on POPwatch. Was it some-
thing about not correctly terminated lines, i.e. only CR where CR/LF
was required by the RFC or vice versa ? Can't remember. Maybe that causes
this problem ? Perhaps you should talk to Gary about this.

There was one version of TCP.STX that returned erroneous EOFs instead of
a proper error code. I fixed that bug quite a while ago.

Thing 1.2 has been available for a number of months in an English
version, in fact there was a review of it in Atari Computing #8. The
way you get it? Register, son, through Joe Connor's Interactive.

I've been trying out the German version myself with Geneva, and so
far I like it very much, especially the ability to iconize the windows.
I even think I've gained some speed with it as opposed to using Neodesk
4 (and I like Neodesk 4 very much).

2729. STuff for sale

Newsgroup: comp.sys.atari.st
Date: 1998-05-06 00:00:00 UTC
From: look@my.sig
Message-ID: <354fd61e.26802203@news.wavetech.net>
Source record: 101469

All right, my PC craves upgrades. :) Need to get rid of some extra stuff, hmm, lets see whats collecting dust around here...

(I don't know what kind of demand there is for this stuff, or what they're worth these days, make some offers and we'll see what happens... shipping is extra...)

A 520STfm, single sided drive, TOS 1.0, RF output, 512k but contains unpopulated 2mb upgrade card. Add some chips and you've got 2.5mb. $40ish?

A 1040STf, double sided drive, TOS 1.0, no RF, 1mb (basically stock) $50ish?

A dead 520ST, the original one with the external power supply. Has 1mb upgrade. Good for parts? I've swiped the TOS roms already... I just checked the power supply with a meter and it looks good. Make some offers...

An ST Replay 4 cartrige, does 8-bit mono sound sampling and output. $20ish?

Two XEBEC SCSI-MFM controllers. Lets you use old MFM drives on a SCSI bus. Doesn't seem to be compatable with newer formatting utils, (at least not ICD's) but work fine if you can get the drives formatted with some other controller, or can find a copy of some really old formatting utils... (I've been unsuccessfull :P) $10 each?

A beat up SF354 external floppy, I had a PC drive in it for a while so it has a square hole cut in the front. I'll throw a single sided drive in there just to get it out of my hair... :) Make offers...

Have fun extracting my email address from my sig. Its been almost a year since I last posted to a newsgroup, and I'm still getting about two spams a week. I'd hate to invite in another flood of spam... (neat thing to try sometime: search for your email address using your favorite web search engine...) Been nice since CyberPromotions went down, please* don't let them find another ISP...

> Kristina Knaving

I don't know of any PC programs that can read Degas images, but you can
try using an ST emulator to run an Atari program that can do the
conversion. Pacifist is fine, but needs a ROM image. The Demo of MagiCPC
should allow you to do the job. Once you get the emulator running, you
can use Gemview or Speed of Light (from most FTP sites) or Neochrome 2
to do the conversion.

Check out the Quick FAQ for emulator links and FTP sites.

Cheers,
Nick

Compared to ZIP drives the LS120 is cheaper, smaller, the media are
smaller and they have higher capacity.
>
> Probably not. at least not easily. this things need special treatment
> (what if the LS120 is declared as D: and you try to copy from logical

> of thing.

This is no problem because the LS120 is managed by the hard disk driver
and thus behaves like any removable media drive. So if the LS120 is D:
you can simply copy data from A: to D: like you can do it when D: is a
ZIP or SyQuest drive.

>

Dear Emmanuel,

Seems to me that you currently reached a limit which was valid for all
*.RCS files up to TOS version 1.4. That's the latest TOS I ever used.
They may(!) not exceed 64 kB.

*.RSC files consist of a header and RSC data. The complete file may
not exceed 64 kB because 16 bit pointers referring to the beginnig of
the *.RCS file, i.e. byte 0, are at work. With 16 bit pointers
addresses from 0 to 65536 are accessable. Now you see, how it may
come, that Interface crashes. But I'm not sure, because I never used
Interface. I modified the original RCS to generate assembler output
instead *.H files.

So what shall you do? Split your *.RSC file into subsets smaller than
64 kB or include your RCS structure directly intop your program. Then
you have to do some work, which would usually be done by rsrc_load:

- Change the resource structures to a format which is understood by
your compiler / assembler.

- In every RCS file, the pointers aren't really pointers. They only
point to byte 0 of the RCS file. You can use Interface to generate a
ready to run .C file with completely initialized data structures.

- The character besd coordinates have to be converted to pixel
coordinates. You should use rsrc_obfix to do this job.

I don't know if TT-TOS or Magic extended this issue somehow.

I hope this helps you out. Best regards,
Thomas

Yes, if the LS120 is used as an extra drive.

What I meant was that in most cases, the LS120 replaces the normal
floppy drive, and therefore acts as both A: and D:. How will HDDriver
manage that ?

I understand you are working on the problem. Would a setup such as a
Falcon with internal 2.5" IDE (master) plus LS120 as 2nd IDE (slave) and
replacing the floppy drive work ?

Cheers,
Nick

>>They may(!) not exceed 64 kB.

It's corrected only in AES 4 (and by the extended RSC made by
Interface - not in the same way, of course... :-().
The 64ko limitation must have something to do with the bug, but not
directly in the RSC file.

Interface offers an extended-RSC format allowing files up to 4 Gb :
all indexes in RSC files are coded with longs and not with ints. That's the
format I use - with the (modified) xrsrc loading function sold with Interface.
Interface saves perfectly the 65 kb RSC file and the HRD files
(thanksfully :-); there's no problem if I don't active the C language
option, used to write the *.H file.
But if this option is set, Interface seems to crash when creating this
file - giving a correct RSC, a correct HRD but an empty *.H file.

>>*.RSC files consist of a header and RSC data. The complete file may
>>not exceed 64 kB because 16 bit pointers referring to the beginnig of

>>instead *.H files.
>>
>>So what shall you do? Split your *.RSC file into subsets smaller than
>>64 kB or include your RCS structure directly intop your program.

The first one isn't very pleasant to handle [we lost all the benefits
of #defines for tree indexes :-(]; the second one is difficult to use for me

because these RSC must be uses on both GEM and X-Windows. No problem for GEM,
but for X-Windows :
- all accents are wrong, and it's more difficult to correct than while loading
- all strings are considered as constants so impossible to write in
them. Very annoying for editable TEDINFO structs. I know some c compilers
allow to cancel this option (-fwritable_strings in gcc) but I'm not sure all
unix c-compilers allow that, and this programm must be as portable as
possible...
- the Interface-generated C files makes a lot of warning appear, because of
the initialisations (no {} around each element of the arrays, for instance)

Anyway, I'll have to do that if I can't solve the problem :-(

Thank's for your informations,

> r is still r
> ...
> but
> a becomes 'alpha'
> b becomes 'beta'
> 'CR' becomes f
> ...
>
> And there is this /pipe/log file...

I forgot to say that with my settings, init1.3 should (as with old
init1.0) write:

"Bonjour, qui es-tu ->" (hello, who are you ->)

instead of

"login:"

or, in fact:

@log%$:# (or something aproaching)

Well, I really need help. I don't even know if init1.3 go and reads all
those /etc/ stuff and behaves as init1.0 did...

One more problem: I keep having problems with cp and mv where floppies
and TOS units are concerned ("bus error" or just freeze).

Any idea of what gremlins I've got in my poor STE?

Thanks in advance,

Yves.

Well, there was the old Neochrome, distributed by Atari I think. Quite a while later (~1990 I think), a hackers group got into adding features to it, STE support, overscan, PC formatter, multiformat support, animation, intro text scroller (!), etc... Probably not the cleanest program ever made for the Atari, but it worked on my STE. They finally got permission to distribute it as freeware.

I have a copy of it somewhere, though probably not the official distribution.

Cheers,
Nick

So this is the Neo 2! It *is* old (1990!). So I have it (first ST Mag
cover disk, remember...). I didn't know it was called Neo 2.

Thanks for the knowledge,

Yves.

2747. troubles

Newsgroup: comp.sys.atari.st

Message-ID: <3550864B.53533295@econ.kuleuven.ac.be>
Source record: 101487

a few questions:
1. since i've updated magic 5.1 to 5.2 some characters on my keyboard
have switched
(e.g.: y and z, - and /, and a lot more punctuation marks)
(at the same time i updated too nvdi to 4.12)
what can be the cause and how to fix it?
another problem is that several times on the desktop and in ASH-emailer
the 1998 date is
converted in 1996?
the 1998 problem?
2. with some programs i got first 2 bombs and then
a crash with message (not in a box, but in the upper half of the screen,
black on white):
Speicherblock durch benutzerprogramm zerstort
(memoryblock disturbed by user?program)
Adresse des (address of) MCB: $01169EDC (this number varies each time)
Daten des (data of) MCB: $C7A3A07D (varies each time)
$277D227D (varies...)
$287D2250 (varies...)
$9F7EFF7D (varies...)
Reparaturversuch (j/n)? (do you want to fix it?)
Systemauszug auf Disk: (system write down on disk:)
what can be the cause and how to fix it?
(after booting i still have about 6 ram in memory)
3. when i click on a url-address in ash-emailer, can i tell thing to
open cab
automatically?; when i do this now, i got a message:
Dateiname unzulassig (dataname/filename intolerable) and that is all:
has this something to do with environmental variable, if yes where can i
find
documentation about this environmental variables (in every hyp-text
everybody
is talking about environmental variable, but nobody tells how to apply
it,
there is even in thing, under 'extra', 'applications' and then
doubleclicking
a program, you have an optional box: environment, but in the thing.hyp
no
explanation or example of how to fill it in.
thanx for answering!

>
Hi Dennis,

well, so much for that! Remember, updating completely to Sting 1.15 just MAY reduce your transfer rates to 200-250 cps again. If this happens, simply re-install the old TCP.STX (should be the one from version 1.08).
Sting is available from Peter's site: http://www.stud.uni-hannover.de/~perot and Newsie can be obtained from http://www.primenet.com/~rojewski/newsie.html

Just went thru' old postings again, I came accross your question about astronomy software for the Atari. You happen to know Skyplot-4? It's got a database for about 16,000 stars up to M 7.0, runs decently from MagiC, on graphic cards and has lotsa features (including real-time viewing). It used to be commercial, I'm not sure it's still being supported, however. Last version AFAIK from somewhere '91 or '92.
I know about a dutch program too, Starmaps, which in the full version has a base of 259,000 stars. Commercial too, also here not sure whether or not it's still supported.
All other astronomy software I know of is old stuff, around '87 to '89. Some are pretty nice, but won't run with MagiC, graphic cards etc. You can run them in ST-hi mode with the 24-bit program (so the TT won't use its TT ram). Astrolabium and Sternbild (both german) are nice then. Sternbild has the possibility to travel thru' space and view constellations from a complete other angle than from Earth, also you could set the viewing back to 1000 BC or to the year 10,000 if you like.

2751. PacifiST question: running Captive...

Newsgroup: comp.sys.atari.st
Date: 1998-05-06 00:00:00 UTC
From: rob@ksk.sala.se
Message-ID: <6iqh5btkh1@nnrp1.dejanews.com>
Source record: 101491

Greetings!

I clearly remember playing Captive on PacifiST, however I have erased the copy I used and don't remember what it was. I currently only have Captive on Medway Boys 97, which doesn't run (I believe the version I got working was a single crack), I tried with nops and such, but if anyone has any additional information on how to get it running (special monitor commands or a other version) please let me know!

My email is rob@ksk.sala.se

Yours Sincerely, Robert Hagenstr&#65533;m

2752. Re: Emulator TOS ROM patches?

Newsgroup: comp.sys.atari.st
Date: 1998-05-07 00:00:00 UTC
From: "Philip Taylor"
Message-ID: <6isv8f$4ng@singer.cent.gla.ac.uk>
Source record: 101242

>I have copied my TOS ROMSs onto my PC to try the various Atari
>emulators. Wouldnt it be possible to patch the ROM files directly

Yes if it's TOS 2.06. You can use TOSPATCH, a suite of programs from
Germany. Available from most Atari archives.
This fixes various important bugs in TOS 2.06, including
ARROWFIX. But note that German ROMs are different, so you really
need UK versions of the patch files. I loaded these to Hensa a while
ago. It's easy to select which patches you want and to apply your own.
You can patch and test on a PC about 100 times faster than in the old
days of blasting ROMs !

Good luck

TTFN, Philip Taylor, Glasgow Scotland

The major difference IMHO is that Freedom accesses resources that it does
not own, like window handles of other applications. This is a kind of code
that I banned from my machines.

Depends on what kind of adapter. The c't ACSI-SCSI adapter supports only
two devices, that's tough.

I guess you won't call the c't adapter a true SCSI adapter ? ;-)

2756. Atari520ST....What's it good for?

Newsgroup: comp.sys.atari.st
Date: 1998-05-07 00:00:00 UTC
From: Dennis <nospam@my.computer>
Message-ID: <6irn3q$18k$1@nntp.ucs.ubc.ca>
Source record: 101342
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Recently, I was donated an Atari520ST Fm computer complete with monitor. Unfortunately, the guy who gave it to me left me with zero software. I know absolutely nothing (obviously apparent) about Atari computers. The only close experience was an Amiga way back when.

My question is how do I get this computer up and running? I suppose I need a sort of boot disk. Does this have to be formatted specifically for Atari computers? I was thinking I could download (with my Wintel) something off of the web to make it go. Any advice, suggestions, or good web sites would be appreciated.

Thanks,

Dennis

First thing to do is to check out the Atari ST Quick FAQ, it has most of
the information you'll be looking for:
http://www.geocities.com/MotorCity/2090/quickfaq.htm

> My question is how do I get this computer up and running? I suppose I need a
> sort of boot disk. Does this have to be formatted specifically for Atari

Wrong, the entire OS, called TOS, is in ROM, you just have to switch on
the machine with any blank disk in the drive. That was a serious
advantage compared to the Amiga in those days. An amiga really needed a
second floppy drive for any serious use. If there is no blank disk, just
wait a few minutes for the desktop to come up, then format a DD disk
with the desktop option.

> computers? I was thinking I could download (with my Wintel) something off of
> the web to make it go. Any advice, suggestions, or good web sites would be

All is in the Quick FAQ, including FTP sites, desktop operations, file
transfer and basic software.

Cheers,
Nick

I'll see what I can do as far as uploads go. We have a long week-end in France this week, so I'll dig through all my old cover disks and PD stuff...

Don't hold your breath though, the way Neo2 was programmed (overscan and stuff), I doubt it complies with any modern standards.

Cheers,
Nick

You (or the music shop) can probably still order it from Steinberg UK
(if there is such a company). They still offer upgrades and stuff on the
product, so they surely have some copies left. What version are you
looking for ? Some french dealers have CAF in stock at 3000FF (UKP300)
or in bundles.

The official steiberg distributor for the UK is (from the
www.steinberg.de website) :

GREAT BRITAIN Arbiter Pro Audio Group
Unit 2, Borehamwood Industrial Park
Rowley Lane
Borehamwood
Herts. WD6 5PZ
Tel: +44 181 207 5050
Fax: +44 181 207 4572
Email: steinberg-uk@dial.pipex.com

Maybe you could email them ?

Cheers,
Nick

Hi Hallvard,

I go along with all of that... BUT:

I used to run MagiC on this TT, on my TC1208 GFX card. Using Matrix' own drivers, and the only support for GDOS features was by means of this ol' AMCGDOS.TOS, necessary to run the card. Put in Selectric in my autofolder and I had a DECENT fileselector.

Next I bought NVDI 4.12 for the Matrix, because I wanted the speed increase and more features of NVDI. Guess what: Selectric no longer being able to replace the (MagiC)fileselector. Only replacement that worked was Boxkite, and I'm sorry to say, Boxkite is OK, if only the author had stuck with "standard keyboard shortcuts" for certain operations.... It's just a f....g pain-in-the-neck to remember everytime that opening a drive in Boxkite needs CTL-x, and copying a file or something needs ALT-C.... heck, I'm also using Thing, and lotsa more software that stick to ALT-x for drive selection and CTL-C for copying...

So, I switched to Freedom, and got a very nice fileselector with lotsa features back. OK, now, when I'm just at the desktop the whole OS (MT, including fileselector and replacement desktop) has eaten up around 4 Megs of memory, but then again, who's expecting to run a system with all 1990's gimmicks on a machine fitted with 1 Mb??? One of the best features of Freedom is that it's NON-blocking, so when I'm in my text-editor I can simply call it up to check whatever somewhere, move the window next to the editors window, click on the latter and write on, without the need of clicking OK in the fileselector first. I'm telling ya, this feature came in H-A-N-D-Y in lotsa situations!
Apart from that, modern looks, colors etc. do little things too...
I recall people, used to using Windows-NT in their offices, they talked to me like "Oh yeah, you've got an Atari?" (sometimes they've heard of it, "that's a games-machine, isn't it?", you know what I'm talking about), next they saw this 10-year old thingie do things MT'ing and they all stood with mouths wide-

open... "Is *that* an Atari??????" YUP, and it runs on only 32 MHz....without
the need of Turbo-cooling...
(If only the TT's own fan wouldn't sound like an idling jet-engine...!)

No way to do so, sorry.
The ATARI parallel ports lack some wires for that.
Only SCSI ZIP drives can be connected (like hard disks).

Correction: There exists an adaptor for the ATARI ROM port, but I think
it's too expensive...

Bye,
Carsten

I had this problem also on my TT with my graphics card. With this Mouse
2.5 (or 2.6) does not cope.
On "normal" machines I think the mouse driver has to be started after NVDI
or any other screen driver. Besides, switch off all other mouse
accelerators.

> My boot now takes about 5 minutes!!!

Nah, nah - we don`t want to exaggurate, do we? ;-)

you can also order it from any chapter of Club Cubase (the
Steinberg users group, they have chapters all over the world and I
believe they have a London chapter). That's how one of TAF's members
got his copy of Cubase Score last month.

you know, there's really nothing wrong with the Intel processor,
just the operating system on top of it.

How about ASH going the full nine yards and developing a version of
MagiCPC that doesn't require Windows '95? It'd probably be even faster,
and have the advantage of an entire software library just waiting for it!

Of course, ASH then has the problem of a foaming-at-the-mouth Bill
Gates chanting "crush, kill, destroy." :)

Just recently, I heard of a lady in Canada
who was so adamantly in love with the First
Word word processor that she absolutely
refused to use any other processor on any
other machine, much to the chagrin of the
local intel-based computer club that was
trying to get her a new printer. After a few
quick emails, we'd sorted out the printer/driver
crisis (an Epson Stylus Color 400 was recommended)
and everything appears to be up and running at
this point.

However: the best answer is to look at the currently
available software that runs on it ... which
is a lot! (Compatibility means more in a
GEM/TOS system, it seems....)

Check out the web pages of the various Atari
dealers on the web and/or call and ask for a
copy of their catalog.

It just happens I keep an on-line list of dealers:
http://www.tmisnet.com/~strads/hq/sources.html#Dealers

Feel free to ask questions about what you find,
we're pretty friendly around here.

I have an ST1040 which was in the shop. The technician says the motherboard, keyboard and diskdrive are fine, the power supply is "flakey" and needs to be replaced. Perhaps you need it for parts?????or perhaps you have one that the power supply is good and you need parts for repair. Make me an offer to defray my trouble of packing, box and shipping to you. Highest bid gets it. thank you for your time. Jim tampa fl sfpu@scfn.thpl.lib.fl.us

Howzabout a blow job, baby?
Of unknown originm but..... Imagine if instead of cryptic,
geeky text strings, your computer produced error messages in
haiku...they would read like these:

A file that big?
It might be very useful.
But now it is gone.

The Web site you seek
cannot be located
but endless others exist

Chaos reigns within.
Reflect, repent, and reboot.
Order shall return.

ABORTED effort:
Close all that you have.
You ask far too much.

First snow, then silence.
This thousand dollar screen dies
so beautifully.

With searching comes loss
and the presence of absence:
"My Novel" not found.

The Tao that is seen
Is not the true Tao, until
You bring fresh toner.

Windows NT crashed.
I am the Blue Screen of Death.
No one hears your screams.

Stay the patient course
Of little worth is your ire
The network is down

A crash reduces
your expensive computer
to a simple stone.

Yesterday it worked
Today it is not working
Windows is like that

Three things are certain:
Death, taxes, and lost data.
Guess which has occurred.

You step in the stream,
but the water has moved on.
This page is not here. -

Out of memory.
We wish to hold the whole sky,
But we never will.

Having been erased,
The document you're seeking
Must now be retyped.

Rather than a beep
Or a rude error message,
These words: "File not found."

Serious error.
All shortcuts have disappeared.
Screen. Mind. Both are blank.

I didn't enjoy re-editing in Mountain Reader, but here is the haiku.
Next time I save it and load it back into Mountain Reader, rather
than doing it in MR. I learn something every time I try.

cul8r. I love you.

"The Poor Deluded Soul" - tderrick@acpu.com

... There's nothing a concentrated phaser blast can't solve.
___ Mountain Reader II - #00000077

I've had this problem when installing Magic v5.11. My TT ROM is US and
Magic installed with the US character set.

After digging around I discovered that the installation process copies
the CURRENT keyboard table into MAGIC.RAM. So the solution is to set
the system keyboard table to what you require before doing the Magic
installation. You can set the keyboard table by using a program like
KEYEDIT.PRG. Then just do the installation again and MAGIC.RAM will
initialise the correct keyboard.

You don't need a boot disc as the TOS operating system is in ROM. It
is, however, a good idea to have a floppy in the drive otherwise the
o/s will search for drives up to P: fo something bootable and this
takes a long time!

Yes, just start downloading stuff from Atari sites. Format a floppy to
720K on the PC - this will be readable by the ST. I suggest you start
with copies of STZIP and LZHSHELL as most odf the stuff you download
will have been packed by one of these methods.

THE COMPUTER DUNGEON has updated its website today, May 7th.

Included are new pages for the Game of the Month, Specials of the Month, ST/Falcon Downloads, Atari XL/XE products, and more.

An updated product listing will be posted this weekend.

Visit our website at: http://www.mcs.net/~isis/dungeon/dungeon.htm

Thanks for taking the time to read this and we look forward to helping you with all your Atari needs.

2790. ST Plus Fanzine for May is Available

Newsgroup: comp.sys.atari.st
Date: 1998-05-07 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <1998050718481100.OAA28001@ladder01.news.aol.com>
Source record: 101376

THE COMPUTER DUNGEON is proud to announce that the May issue of
ST Plus Fanzine (Issue #28) is now available and ready to ship.

Included in this issue are: an interview with Alexandere Clauss (author of
CAB),
Desktop Publishing Hints & Tips, HTML Tutorial, Software Reviews, Education
Corner, Diskmag Reviews and much, much more.

36 Pages of informative and fun reading. Cost of ST Plus Fanzine is just $2.00
which includes shipping. Or make any purchase from The Computer Dungeon
and receive the current issue FREE.

To order or for more information, visit our website at:
http://www.mcs.net/~isis/dungeon/dungeon.htm

Thanks to EVERYONE at ST Plus Fanzine for another GREAT issue and for
your continued support of Atari users worldwide.

"Support Shareware Authors"

2791. Many GREAT Shareware Titles Available

Newsgroup: comp.sys.atari.st
Date: 1998-05-07 00:00:00 UTC
From: comdungeon@aol.com
Message-ID: <1998050718535100.OAA24136@ladder03.news.aol.com>
Source record: 101377

THE COMPUTER DUNGEON has many full version Shareware programs
available for your Atari ST and Falcon. All programs have outstanding graphics,
sound, and playability and are commercial quality (if not better).

Titles include: Realms of Reality, Annex, Infinite Power, Mole Mayhem,
Running, Double Bobble 2000, War-The Special Edition, and many more.

Our website has screen shots and descriptions of all available titles.

Please help support the Shareware System and Shareware authors by visiting
our website and purchasing one or more of these excellent titles.

http://www.mcs.net/~isis/dungeon/dungeon.htm

Thank You for taking the time to read this and we hope you'll support the
Shareware system and the authors that support Atari computers.

I've done some research on this, and while it's easy to get hold of
quite cheap cards, it's *impossible* to get proper docs :-(

2797. ---> Support MEGA 3 <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-07 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6it4ij$26d$1@heliodor.xara.net>
Source record: 101383

For those of you who have not seen the best disczine around Click on the links at the end of this message and get disc 1 and 2 of issue 2 of MEGA DISCZINE.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't. There are a lot of people who have not yet seen MEGA so get downloading there or over 200 articles on the 2 discs with a nice shall which anyone can use without any info at all on it.

There are many sections in this zine, Some or 1 off and are very interesting to read, It would be impossible to list them all so heres a quick rundown.

True horror/ghost tales, STOS, Tesla, Electronics, jokes and humour, Dreams what they mean and stuff, get rich, UFO articles, stories, Anti car crime, Reviews, Returned questionnaires, Science, Black holes, and much more. Simply take a look and you will be amazed on what we have found for you. There should be something for everyone in issue 2. Lets here what YOU would like to see appear !!

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced. Anything you do will be included in issue 3 which is currently been done by the MEGA team.

I want to make MEGA "YOUR" zine, so tell me what you want and we will include that page in the next issue. Any ideas not matter who obscure or small they be, are more than welcome.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it. This would be a great shame as there is now other zine like it.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time.

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Everyone who has sent me mail over the last few weeks has not been added to the list. If you would like to be added to the mailing list then please re-mail me so I can add you to the list. Please check if you have requested to be added to make sure you have been added.

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him. If you would like to send Lee mail, Send it to me but put "FOR LEE ROUND" in the subject box and I will be happy to pass it onto him. If your interested in UFO's or related stuff then request issue 2 of UFOST now, I regret it still has not been added to my site. Send me a mail if you would like a copy.

I have issue 2 ready for E-mail should you dare to ask for it. Sorry but it has not yet been added to my site, Keep trying though !!

Here are the URL's for MEGA Disczine issue 2.

ftp://ftp.funet.fi/pub/atari/mag/mega/mega2_d1.zip

ftp://ftp.funet.fi/pub/atari/mag/mega/mega2_d2.zip

Thanks to Deano for the upload of issue 2.

2800. Ethernet Adapter for all Atari Computers

Newsgroup: comp.sys.atari.st
Date: 1998-05-07 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6itbcn$g1s@news.Hawaii.Edu>
Source record: 101386

Greetings,

Tired of that slow modem? For those of you that are interested in attaching your Atari Computers to an Ethernet network, or to an Ethernet via cable modem, please read on.

Why Ethernet? Aside from the ethernet networks that many people have access to in the workplace, cable TV systems are beginning to offer Ethernet over cable service to the home. In my area, it costs about $40 per month for unlimited Internet access, at a speed that is at least fifty-times as fast as a 28.8 modem. But how can I get this Falcon plugged into the Ethernet cable modem?

It seems that with no ethernet adapters currently in production for Atari compatible models, and with the relative scarcity of previously manufactured boards, it would make sense to find an existing adapter for use with Atari. The one port type that all Atari computers can connect to is SCSI (older models require a SCSI host adapter such as a Link). This is also one of the fastest ports on the Atari computers.

On the other hand, there are several companies that make SCSI to Ethernet adapters, primarily for Apple computers. It is quite likely that drivers could be written to support one of these adapters, providing Ethernet connectivity to ST, TT, Stacy, STBook, Falcon, Medusa, Hades, and Milan computers - any Atari compatible that has an ACSI or SCSI port.

I would like to facilitate the development of drivers for one such SCSI to Ethernet adapter, probably the DaynaPORT Pocket SCSI/Link-T. The catch is that I'll have to provide the software author(s) with an adapter to work with, and as a reward for their efforts.

If you're interested in supporting this project, please contact me. I would like to pool donations, purchase an adapter, and ship it the a software developer that has agreed to look into the project. I have already contacted the manufacturer for developmental documentation.

Thanks!

Aloha,
John Perez - jperez@hawaii.edu

Hi,

As a newcomer I am still getting to grips with how all the programs etc. go together! First of all I am using STinG. What is the DNS Cache for and why according to the start up screen, after STinG info do I get the message "DNS Cache failed to load"? This only happens occasionally. Rebooting, warm or cold has no effect.

Thank you for any help.

Trevor

Are you looking for a System RAM board (2MB or 8MB) or a TT-RAM board?

Hi Keith, on 04 May 98 you wrote: ...respect, brethren
kl>
kl> Is there any way to play Real Audio on a humble STE.

This is the problem I came across the other month. It seems there's only RAPLAYER.EXE on the PC that'll handle it...

kl> If not, is there any way to convert R/A, to a format like WAV which
kl> I can play???

No-one I've asked knows any conversion tool on the PC either. The only route is to take the sound out of the PC and resample it to WAV, but even then the final filesize may be 8 times the size of the RA file...

..not the most straightforward job in the world B^{)

Finally, William Wong tells me that there's a $100 license fee to pay for access to the programming docs, which rather puts the block on freeware conversion utilities of any kind...

I'll second that suggestion; its an excellent manual --- more helpful than the original owner's manuals. I have Papa's Graftik Guide in stock. If interested, drop me an Email with your shipping address and I'll get back to you with pricing (including shipping cost).'

Saying that, you've reminded me that the FaST Club sell a commercial
hypertext guide called 'Mastering Atariworks' which sounds detailed and with
lots of tips (apparently).

The UK price is 29.95ukp including tax. You can EMail Paul Glover at
stclub@cix.co.uk or visit their Web site at:

Must be something for the "big" softwarehouses, like ASH or Wizztronic. Perhaps
Milan Computer, Hades and Medusa.

I really like to see Real Audio and Real Video on one of the faster "Atari" machines.

From: "K.Hampf" <k_hampf@yahoo.com>
Message-ID: <3551567d.0@d2o29.telia.com>
Source record: 101441

Hi all!!

How can I get to bypass the IDE drive in Falcon using MagiC? My internal IDE died and I only use external SCSI-drives. I have no problems using Fastboot on the bootsector of a floppy in TOS, but it overwrites the MagiC booter at the restart. Is there any easier way? Disable IDE in NVRAM? Is the MagiC booter still the same since 96 or has the installer program done wrong?
Then also, I need to shift the screen to the right when using bigger desktop sizes, and I'm using SWIDTH.PRG to do that. If I do a resolution change MagiC runs two copies in the START directory, but when using JPEGView (that changes resolution by itself) I can't get it back to normal without running SWIDTH manually. Is there any easier way? Is there any _good_ GIF and JPEG picture viewer for use under MagiC on a Falcon?
And, finally, how can I get Mouse 2.5 to autoboot under MagiC 5.20? I can't get it to work unless I start it manually, and that's annoying, since MagiC isn't that stable in my opinion, and I perform a thousand reboots at one session.

My boot now takes about 5 minutes!!!

From: curis@news.ens.fr
Message-ID: <6ivinl$dg7$1@nef.ens.fr>
Source record: 101192

Bonjour,

Dans l'article <355335d413dfc03@post1.com>,
Hallvard Tangeraas, <hall@post1.com> a ►crit :

►►So I'm pretty sick and tired of it all and want a proper RSC editor. I
►►believe the author of the program I'm editing the RSC files for is using
►►"Interface", and without having used it myself I have a feeling this is
►►"THE" RSC editor to use... any views on that?

Interface is really very good - except from the problem I mentionned
in a previous article. ►►The►► RSC editor, I don't know, but really very
pleasant to use and very powerful.
But not perfect, one or two things are missing :-(

►►I don't have the dough to go to the shops and buy a new copy of it, but
►►does anyone have a used copy they want to part with?
►►And are there other serious alternatives apart from "Interface"?

I would be interested about that also.

Greetings,
I've had a call from a chap who is trying to set up AntMail & Atari
IRC so that he can make full use of his internet connection,
unfortunately the AntMail prog automatically disconnects the modem
when he tries to retrieve mail giving the obvious error message 'Modem
not connected'
With Atari IRC he gets various error messages when trying to connect.
As we do not use the Ataris here for INternet connections I cannot be
of much help, I've told him how well informed the inhabitants of this
group are and that he should get the answers here.
Can I / he / we ask that any replies are sent by e-mail to his friend
at martin@jadesw.demon.co.uk
Thanks folks.

Hi!

> Any one got any experience with blow up and Cubase Audio?

Cubase + higher resolutions usually screw up if you use a lot of color.
(The VIDEL takes up too much bandwidth of the bus). I use Videl Inside with
my homebrew resolution extender and I've got the same problem in 256 colors
and sometimes in 16... But everything runs OK in 1280x960x2..

The path is wrong indeed. It must be *193.190.205.13 atari*
If one used aFTP there wasn't a big problem though but with Cab it
was impossible to reach the site of one used archive/atari.

>Oh another thing... the name is Hallvard. :-)

Oh sorry. I won't do it again (I hope)

2834. My Falcon and a Fireball. Oh, Help.

Newsgroup: comp.sys.atari.st
Date: 1998-05-08 00:00:00 UTC
From: f93anga@dd.chalmers.se
Message-ID: <6ivvcrlgn1@eol.dd.chalmers.se>
Source record: 101204

Hello,

I've been trying to connect an Quantum Fireball 1080A to my Falcon030.

To do this I went to an Amiga store and bought a 2.5 -> 3.5 inch
cableconverter. I connected the power to the same pins as the diskdrive
and started the computer. AHDI recogniced the drive so I started HDX.PRG
and tried formatting the drive. When finished, the program told me
that some reserved sectors are bad when it was searching for bad sectors.
It suggested that I`d try to reformat.

If I don`t search search for bad sectors it will try to partition
indefinetly.

I installed it in a PC and there it worked just fine.

I have tried to modify the parameters for formatting the drive according
to the information on the drive; 16 heads,2112 cylinders,63 sectors.
Nothing helps... The computer still works fine with my old 2.5" drive.

Does anyone know what might be wrong?

Best regards

Anders Gaerder, likes SCSI better.

yes!
I had HUGE trouble downloading Erik's MyMail via Netscape, or IE.
the files were >always< corrupted.
but, happily enough _no_ problem using NEWsie or mgFTP.
I would suggest that you use an Atari program! :)

OK, fine, I'll try CAB or some other Atari program. Its just that the connection from the DO$ Box at school is so much faster than my modem connection I wanted to use it for such a big file (why 400K of documentation!?!)

I'm trying to find a program that will edit scanned images for Calamus. I have tried Positive Image but find it a) incomprehensible and b)terminally slow on my bog standard Atari STFM with 4meg. It just crashes... and all i want is to delete bits of the scan.

I can convert GIFs to IFFs to IMG but don't seem to own anything that will process them. Any ideas, and where to get anything from?

s> (why 400K of documentation!?!)

I think the documentation comes in text, ST-Guide hyperlink and html
(including graphics) formats. Once you get the docs once you then only need
to get the program archive on updates.

As a LONG TIME SYSOP, it took you two hours to find out that the ISP dropped
the carrier ??? Hmm.

> Plus, how many times have you found a used modem to buy and it
> has '0' docs? (hmmm ... reminds me of CAB!).

Apart from the send and receive LEDs, the LEDs have standard labels which
are the same on virtually all modems. No docs required for a long time
sysop.

>
> Wrong, the entire OS, called TOS, is in ROM,

Not necessarily. Early machines did not have TOS in ROM. I do not know
about a 520 STFM, never heard about that model. If it really has a floppy
build into the main case, it's likely TOS is built in too, but AFAIK all
machines with built-in floppy are at least 1040 STs.

So the guy should switch it on and wait until some picture (not just the white
screen at the beginning), which might take one or two minutes without floppy.
Then, either it's a desktop (plain single-color with a white bar at the top
and two or three icons, or it's BOOT's request for a boot floppy, which looked
like a big picture of a disk drive and a floppy and a OK button.

This is the absolutely crucial part (and also the most difficult I guess).
This, or at least documented source code of an existing driver for some
other system, is absolutely required to build a driver. So before purchasing
anything, make sure you hold the docs in your hands and have someone look
at them who knows what programming is all about.

2844. ---> Support MEGA 3 <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-08 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6j2d19qbp1@heliodor.xara.net>
Source record: 101214

For those of you who have not seen the best disczine around Click on the links at the end of this message and get disc 1 and 2 of issue 2 of MEGA DISCZINE.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't. There are a lot of people who have not yet seen MEGA so get downloading there or over 200 articles on the 2 discs with a nice shall which anyone can use without any info at all on it.

There are many sections in this zine, Some or 1 off and are very interesting to read, It would be impossible to list them all so heres a quick rundown.

True horror/ghost tales, STOS, Tesla, Electronics, jokes and humour, Dreams what they mean and stuff, get rich, UFO articles, stories, Anti car crime, Reviews, Returned questionnaires, Science, Black holes, and much more. Simply take a look and you will be amazed on what we have found for you. There should be something for everyone in issue 2. Lets here what YOU would like to see appear !!

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced. Anything you do will be included in issue 3 which is currently been done by the MEGA team.

I want to make MEGA "YOUR" zine, so tell me what you want and we will include that page in the next issue. Any ideas not matter who obscure or small they be, are more than welcome.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it. This would be a great shame as there is now other zine like it.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time.

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Everyone who has sent me mail over the last few weeks has not been added to the list. If you would like to be added to the mailing list then please re-mail me so I can add you to the list. Please check if you have requested to be added to make sure you have been added.

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him. If you would like to send Lee mail, Send it to me but put "FOR LEE ROUND" in the subject box and I will be happy to pass it onto him. If your interested in UFO's or related stuff then request issue 2 of UFOST now, I regret it still has not been added to my site. Send me a mail if you would like a copy.

I have issue 2 ready for E-mail should you dare to ask for it. Sorry but it has not yet been added to my site, Keep trying though !!

Here are the URL's for MEGA Disczine issue 2.

ftp://ftp.funet.fi/pub/atari/mag/mega/mega2_d1.zip

ftp://ftp.funet.fi/pub/atari/mag/mega/mega2_d2.zip

Thanks to Deano for the upload of issue 2.

2845. WTF: Programmers versed in SCSI and/or Networking

Newsgroup: comp.sys.atari.st
Date: 1998-05-08 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6iticd$mil@news.Hawaii.Edu>
Source record: 101246

Greetings,

I'm trying to facilitate a project to develop software drivers for one of the SCSI to Ethernet adapters currently available in the Macintosh world so that they can be used with all SCSI capable Atari computers (including ACSI machines with SCSI adapters). I have made requests for programming documentation from various manufacturers of these pieces of hardware, and have spoken with one programmer that is willing to consider the project. If there is anyone that is interested in taking on this task, or supporting this effort, please contact me. The source code for the STinG Riebl Ethernet driver is available to interested parties.

Please also read my post entitled:

Ethernet Adapter for all Atari Computers.

Thanks!

Aloha,

Welcome to the world of Atari and the Internet! Before your done
you just might have less hair on your head! I just spent about
2 to 3 weeks getting things to work as they should. I am NOT
going to tell you a lot of stuff, there are other users here
that have a lot more info than I do. But the one thing I can
say, don't worry about that DNS cache, in fact you can delete
the one that's in there and STinG will always write a new one
for you anyway.

Right now I'm resting a little, then I'm going to gather all
the forces I can and attack CAB for web viewing! THEN I want
to work on my own web page!

From: look@my.sig
Message-ID: <35526ffd.110830316@news.wavetech.net>
Source record: 101251

All right, how many of you have heard about the RC5 cracking effort? Go to www.distibuted.net if you haven't...

It would be nice to see Atari systems working on it, I intend to try writing a simple standalone rc5 cracker for the ST someday, but I probably won't get around to it anytime soon... :P

The quickest way to do it would be to get a Linux 68k bovine client created. Should be trivial to port the existing Linux x86 client, we just need a volunteer... I'm suprised the Amiga people haven't done this already...

Hmmm, the top 100 for yesterday looks something like this:

1 Team EvangeLista (Macs Rule! :-)
2 Japan FreeBSD Users Group
3 Japan Linux Users Group
4 Team Warped (OS/2)
5 LinuxNET RC5
6 Virginia Tech Team
7 The Amiga RC5 Team effort
8 Team Win32 (Windows)

The Mac team is on top! And the Win32 team is behind Linux, Mac, OS/2, and* Amiga teams! Of course, I suppose most of the windows CPU power is splintered into most of the other teams...

Lets add the Atari to the list. Soon as the stats server finishes with its daily update, (grrrr...) I'll create 'Team Atari' or something, if one doesn't seem to already exist...

Daniel L. Dreibelbis wrote in message <3551b0bd.0@diana.idirect.com>...
> you know, there's really nothing wrong with the Intel processor,
>just the operating system on top of it.

Oh yeah? What's your opinion of the CISC BIOS architecture used by Intel then? Swell, now isn't it? Reminds me an awful lot of the Z80 architecture in Luxor's ABC80 ;)
If you compare an Intel Pentium II and an IBM PowerPC G3 CPU built with the same technology and at the same speed, let's say 300MHz, the PowerPC beats the crap out of the Pentium. The G3-processor does about twice the job of the Pentium at the same speed AND the G3 has no heating problems which makes it suitable for laptops.
If you want to make real comparisons and try to be fair, forget the Intel-processors, look at the compatible AMD-processors instead. The AMD K6 running on 400MHz is *FAST*. But then again, it needs to be cooled down to -40 degrees Celsius to run that fast :) But all of their processors has better performance than any Pentium chip compaired at equal speeds ... but then again, they just don't want any comparisons with the PowerPC G3 ... bad for their products ... and the G4 and G5 are just around the corner ...

> How about ASH going the full nine yards and developing a version of
>MagiCPC that doesn't require Windows '95? It'd probably be even faster,
>and have the advantage of an entire software library just waiting for it!

If the MagiCPC uses Win95 I'm sure it's because it's taking advantage of the IMHO only usable feature of that OS, the Windows GUI-routs. They are damnded easy to use and the MacOS's GUI routs are IMHO not.

> Of course, ASH then has the problem of a foaming-at-the-mouth Bill
>Gates chanting "crush, kill, destroy." :)

Not at all. As long as you buy his 3K$ "Windows 95 (MacOS 87) Temporary On/Off" switching software or something. Else he will do everything he can to stop the whole project at first and then start funding it like he did with Macintosh ... and from the beginning Mac gained its popularity because of all its applications ... almost all made by Microsoft :)

Isn't the "G3" a Motorola-only PPC designed specifically for the Mac?

(Or have I just mis-recalled a recent comp.sys.powerpc thread?)

SO>Can someone please help me with:
SO>ATARI Netherlands (adress, contacts)
SO>HDX.prg and SHIP.prg to install a SH204 HD to the ST1040?

Basically use HDX.PRG to format and partition the drive. It also gets used when checking for bad sectors, but that's another story. When preparing the drive to be useable you must first format the drive. Then you partition it into sections which are given drive names. If your 1040 is pre-TOS 1.04 then you'll only get 16MB per partition, but on a 20MB SH204, I doubt that'll be much of a problem.

SHIP.PRG is for when you want to shut down the hard disk. Some people just use it for when they are going to transport the drive, so that the read/write head inside doesn't scrape the hardisk surface causing data loss. Some others park each time they shut down. It's a matter of choice. Anyhow you run SHIP.PRG after you've closed down all windows but the one to access SHIP.PRG. Next run the program, the drive should make a noise and the red light comes on. Now shutdown the drive. Running SHIP.PRG while all windows are open can cause problems. If you want a better program for parking a drive head, then give NSHIP.ACC a try. It closes all the windows for you.

2858. MIDI configuration problem

Newsgroup: comp.sys.atari.st
Date: 1998-05-08 00:00:00 UTC
From: Simon Johnson <simonjohnson@usa.net>
Message-ID: <Yfz41.16$Gc2.123062@rockcake>
Source record: 101259

I have a question about the MIDI thu port on my ST.

I have a shareware sequencer (I can't remember the name of it but it's pretty good) however it doesn't have a software MIDI thru option. This means I can't plug in a MIDI driver keyboard to the MIDI in, and plug other devices into the MIDI out (well I can but I wont be able to hear what I'm playing when recording). The only way to record is to plug the driver keyboard into another device, and plug the thru of that device into the ST. However this means I can't play back other channels when recording.

I noticed that there is a MIDI thru combined with the MIDI out socket, does anyone know if this will mix the MIDI out with the MIDI in, or whether it will just feed the MIDI in to the MIDI thru, and if so if there is an easy way to get round this problem.

Cheers

Simon

As far as I know CoMa is compatible with the QFax program. You should
be able to use the CALFAX.CDT printerdriver, which was part of the
QFAX package, to create faxes within Calamus, ready to send with
CoMa. Let me know if you need a copy of it.

Web addresses are a combination of 4 digits (aaa.bbb.ccc.ddd) but
these can also be represented by a character string (irk.zetnet.co.uk)
to improve usability. Web software converts from string to digits
before addressing the actual target server. The CACHE holds a table of
the most recently used addresses in string and digit form so that the
software can make a quick translation when they turn up again.

>and why according to the start up screen, after STinG info
>do I get the message "DNS Cache failed to load"? This only happens
>occasionally.

This usually happens only once, when you have NO CACHE.DNS file in the
/MODULES/ folder - STiNG then creates one.

If it happens more often than this you probably have disc problems.
Run EDGE or Zorg (or somesuch) to see if you can diagnose and fix it.
Otherwise just rename CACHE.DNS to something harmless and let STiNG
set up a new CACHE file on another area of the disk.

FWIW, there is already such an adapter for the Amiga, called
"Topolino" or similar. Since the only difference between Amiga and
Atari mice are the pinouts (which is why most aftermarket mice are
switchable between the two), anyone needed such a solution tomorrow
could purchase a Topolino and wire up and adapter.

BTW, if you incorporate a switch into your device, you could market it
to both Atari and Amiga owners, something the makers of the Topolino
overlooked.

On the subject of third button support, it would be nice if support
for the "fourth button" some mice now have (usually on the side, like
the current top of the line Logitech mouse, and the newest version of
the inexpensive Genius Netmouse), as well as scroll wheels. About the
only way I could see to support that, however, would be to make use of
the second joystick port for the signals (and either a custom driver
or software written to spec would be required, of course).

2869. Falcon (w/o DSP) emulator for Amiga?

Newsgroup: comp.sys.atari.st
Date: 1998-05-08 00:00:00 UTC
From: lmcclure1@mindspring.com
Message-ID: <3552db5f.10948563@news.mindspring.com>
Source record: 101270

In the same room, I have my Falcon030 with 4megs of memory and its standard 16Mhz '030, and an Atari 1200 with a 50Mhz '030 accelerator and 8 megs of RAM, that will soon be expanded to 16megs or more.

Expanding the Falcon to 16megs would cost at least $99, and accelerating it to match the 1200's speed would no doubt cost more than the price I paid for the 1200's accelerator (well below $100).

I know that there is at least one, if not more Atari ST emulators for the Amiga, but do any exist that emulate the Atari Falcon (except for the DSP, and naturally, the the 16-bit sound hardware)?

Hello!

Surely I'm interested in an SCSI-Ethernet-Adapter for ATARIs (could depend
a little bit on the price...)

I appreciate your motivation!
One hint: When developing a driver for the SCSI adapter please remember
the universal SCSI driver for all ATARIs (and MagiCMac) from Steffen
Engel, Germany, to access any SCSI device connected to any SCSI port.
I think it would make things much easier. Besides your driver has not to
cope with hardware directly, no problems with MagiC and/or background DMA
and so on. (Best would be to contact Steffen Engel directly on the net,
unfortunately I do not have the mail address right here...).

Best wishes for your project,

Carsten

Hi Trevor,

don't worry... Cache.dns is used by Sting. It get's its "data" whenever you
connect with a newsreader to your host, then this is written into Cache.dns.
Once you connected to your Newsreader or a FTP site, the message "cache load
failed" will no longer show up.

It just repeats the MIDI in. If you want to merge you'll need to get a
MIDI merger. The names Anatek and Doepfer spring to mind: if you look at
<URL:http://www.cs.ruu.nl/pub/MIDI/DOC/midimerge> You'll get an idea what
was available 5 years ago, and is probably all in junk shops by now. :)

I mostly use KCS now, but I used to be a fan of Henry Cosh's sequencer,
which you van find at <URL:http://www.hitsquad.com/smm/programs/accomp25.tos/>.
I *think* it has software MIDI THRU ...

No. It's a RISC-based processor and it is in no way limited to MacOS.
There's a version of Windows NT for PowerPC, and there's also BeOS for
PowerPC. However the PowerPC has been used only in the Macintosh hardware
architecture AFAIK, but then again that originates from the Macintosh
Motorola 68K architecture wich is what we like at the moment.

Topolino is a nice device, but at $40 it costs twice as much as an
Atari mouse!

No no no no.... maybe you have only heard of PPC in MAC but it's used
in many places like embedded systems. Ericsson uses it in a number of
places.

Hi Folks

Recently there was a lot of talk about the Diamond Edge Patch and where it was obtainable from. After a great deal of messing around I have finally managed to get a copy But... It tells me that my Registration Number is incorrect. It isnt ! Someone did mention that they had similar problems could they please say how they got around it,or if anyone knows of another answer I would be thankful

Regards Derek

Any one got any experience with blow up and Cubase Audio?
I started using Blow Up with black Scorpian's videlity and noticed I started getting hard drive lock ups in CAF.(also when using Blow Up software.)
I did some tests, copying a 90 meg folder,using kobold,from one partition to another.
Using blowup/videlity 7 out of 8 copies locked up my drive.
Not using blow up/videlity, 8 out of 8 copies went perfectly.
Can anyone shed any light on this? (I use HDDRIVER7)
Thanxs for any advice.

He Hallvard (with a D),;-))

strange. Karl and I have tried it this evening. With Cab there was no
way to get through. The path was wrong.
Only with ftp://193.190.205.13/atari we could make it.
With aFTP we got a message "Can't change to this directory" (something
like that) and we arrived in the root.

Try it without the archive/ and let me know what happened.

Motorola and IBM produce them and they are also designed with Apple. I
don't think it is Mac specific just the 1st chip to be optimised for the
Mac.

Calamus has the ability to do simple cropping of GEM IMG files within Calamus itself. For more detailed editing of black and white IMG files, I generally use SCANSOFT, which is the scanning software package I've been using for years. The package was imported from Europe so you should be able to find it over there in the UK somewhere. Of course, if you're trying to edit color scans, Positive Image is probably one of the best packages, but your 4mb STFM is not going to be up to the task, which would account for the system crashing you're experiencing,

Good luck.

Terry May - Las Vegas, NV

Terry,

You might e-mail Dan regarding the mutiple download problem you were talking about. He memtions in the notes for the latest version of CAB.OVL that some of the beta testers experienced problems, but it was inconsistent. The notes were not clear as to the type of problems people were having, ie. system slowdown or problems with the actual downloads.

Stephen,

One solution would be to sell (trade-in?) your current ZIP and get the
ZIP Plus. This way you could use it both on your PC and on your ST with
a ACSI/SCSI adaptor. Additionally you will need HDriver to access the
external ZIP.

If you are using HD as your hard disk driver you should be able to set
your boot partition to any of the external SCSI drives. If you don't
have HD, buying it is going to be a lot cheaper than replacing the IDE
notebook drive in your Falcon.

2903. TAF Meeting May 20th - Elections and Suzy B's

Newsgroup: comp.sys.atari.st
Date: 1998-05-09 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3553d2f0.0@diana.idirect.com>
Source record: 101227

Agenda for the May 20th 1998 TAF meeting:

It's election night at TAF, and the first anniversary of the current executive. Did we do a good job over the past 12 months? Think you can do better? Well, that's why we exercise the democratic process at the club - if you're a TAF member in good standing, your vote counts, and you qualify to run for office as well if you feel that the club needs to take a fresh new direction that the current exec is lacking. Don't waste you're vote!

After the voting comes the night's featured speaker - Michael Burkley of Suzy B's Software, one of the largest purveyors of public domain and shareware for the Atari in the world! We'll hear about what Michael has been up to lately, including the re-release of his excellent CD-ROMs of PD/shareware through Floppyshop, and find out just what it's like to run an Atari-oriented business. His last appearance at a TAF meeting a number of years ago was very entertaining, and this night should prove likewise.

And if we have time, Dan will talk about his recent UK trip, complete with pictures and stories about his visits to Atari Computing and Systems Solutions......

See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

2904. TAF Flea Market July 11th

Newsgroup: comp.sys.atari.st
Date: 1998-05-09 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3553d317.0@diana.idirect.com>
Source record: 101228

On SATURDAY, JULY 11TH, the Toronto Atari Federation will be presenting another one of their famous and popular FLEA MARKETS!

Yes, here's your chance to come to a bazaar of Atari-related software and hardware where you can shop for that peripheral or application for your ST/TT/Falcon or 8-bit that you've been looking for. Or, if there's stuff that you have no use for, get yourself a table and sell! Get rid of your old junk and find yourself a treasure!

We're hoping to have some local dealers (and with luck some out-of-town ones) show up for this event, so we've booked a larger hall in anticipation of a good turnout. Tables will be available at a cost of $5.00 each, with entry to the event at $2.00 each. The Flea Market itself will run from 1:00-5:00 PM (with setup commencing at 12:00 PM and teardown at 5:00 PM) so as to make it possible for as many people inside and outside Toronto to show up. We'll keep you posted on who will be showing up for this event as we make confirmations.

As usual, piracy cannot and will not be condoned at a TAF Flea Market - anyone caught selling pirated software or stolen hardware will be dealt with severely!

Please refer to the bottom of this document regarding getting in touch with TAF on booking tables or finding the location of the event - and we'll see you there!

The TORONTO ATARI FEDERATION Flea Market will be held in the Gold Room of the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Time running from 1:00PM to 5:00PM.

Bonjour,

Dans l'article <894635620_OASIS_@zetnet.co.uk>,
Arthur Marshall, <arthurm@zetnet.co.uk> a ?crit :
??I'm trying to find a program that will edit scanned images for Calamus. I have
??tried Positive Image but find it a) incomprehensible and b)terminally slow on my
??bog standard Atari STFM with 4meg. It just crashes... and all i want is to
??delete bits of the scan.
??
??I can convert GIFs to IFFs to IMG but don't seem to own anything that will
??process them. Any ideas, and where to get anything from?

There are modules for Calamus, to edit bitmap images : Brush module,
given with Calamus SL, and Paint module, made by Adequate Systems, more
powerful. Calamus can directly load the GIF files - 87a with the given
importer?; any kind with the invers' GIF importer. For deleting bits, brush is
ok.

You can even scan directly in Calamus with the GDPS module - well, one
says, because I never tested it.

You can also use, for IMG monochrome files, Touch Up. It was given
with handy scanners of Golden Image, but may be it can be find alone.

There is the addition of the sector editor DADE which at one time was
called Knife ST.

There where some improvements to the SCSI support but it still seems to
bomb on Falcon IDEs when doing a SCSI mirror.

The 520STFM was basically a 1040 with only 512K of RAM. It was
the replacement for the 520ST (with separate floppy) as the "entry" level
model of the ST series in the U.S. It came out shortly after the 1040
ST.

On Fri, 8 May 1998, Peter Rottengatter wrote:

Hi,

Does anyone know where to look for a Korg O5R/W editor or
a suitable Cubase Mixer map? (fairly cheap. Pref.Nowt!)

Also the same for a Yamaha DX7

I need it for Cubase v3.0.

As an alternative, can anyone suggest good suppliers for
the same. Again at a fairly low cost....

Thanks in advance,

Andy

Hey folks,

I'm in despirate need of GOOD backup software. I've tried ELFBACK and SYBACK, and found them wanting in several areas.

Whatever I end up using should be TT, Geneva/NeoDesk, and MagiC compatable, and fairly fast.

I've got a new SyQuest EzFlyer 230 that's just begging for backup data...

Any suggestions?

Thanks,

Joe Mirando @ STReport

I have a selection of Atari ST titles for sale.

This List Updated 9/5/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

Railroad Tycoon (2d,ds,meg) 10

STRATEGY, MIND AND ADVENTURE

Alpha Waves (1d,ss) 2
Go-Moku/Renju (1d,ss) 2
Federation of Free Traders [F.O.F.T] (2d,ss,nb) 2
Conflict Europe (1d,ss,nb) 2
Crash Garrett (2d,ss) 2
Archipelagos (1d,ss) 2
Tower of Babel (1d,ss) 2
The Quest for the Time-Bird (3d,ds) 2
Quizam! (2d,ss) 2
Lords of Chaos (1d,ds) 3
Driller (1d,ss) 3
Populous (1d,ss) 3
Borodino (2d,ss) 3
'Nam 1965-1975 (1d,ds,nb) 3
Pirates (2d,ss,nb) 3
The Kristal (2d,ss,nb) 3
First Contact (2d,ds,nb) 3
Airborne Ranger (2d,ss,nb) 3
Murder (1d,ds) 3
Knightmare (2d,ds) 3
Lemmings (1d,ds) 3
Corporation (2d,ss) 3
Mega-Lo-Mania (2d,ds) 3
Elite (1d,ss) 5
Terrorpods (2d,ss) 5
Loom (3d,ds,nb) 5
Jinxter (1d,ss) 5
Populous II (1d,ds, meg & 512k versions) 10
Lemmings 2 - The Tribes (1d,ds,meg) 10
Elite 2 - Frontier (2d,ds,meg) 10

ARCADE

Skweek (1d,ds) 2
Defenders of the Earth (2d,ss) 2
Eliminator (1d,ss) 2
Wrangler (1d,ss) 2
Hard Drivin' (1d,ss) 2
Yogi Bear & Friends In the Greed Monster (1d,ss) 2
Blazing Thunder (1d,ss) 2
Mig 29 Soviet Fighter (1d,ss) 2
Fast Food (featuring Dizzy) (1d,ss) 2
Whirligig (1d,ss) 2
Hellraider (1d,ds) 2
Outrun (1d,ss,ni) 2
Bad Company (1d,ds) 2
Rambo III (1d,ss) 2
Mean Machine (1d,ds) 2
The Light Corridor (1d,ss) 2
Last Ninja 2 (1d,ss,nb) 2
Voyager (1d,ss,nb,NSTE) 2
Ghostbusters II (4d,ss,nb,ni) 2
Hellraisers (2d,ss,nb,ni,NSTE) 2
Legend of the Lost (2d,ss,nb,ni) 2
The Last Shoot-'em Up (1d,ss) 2
Time Bandit (1d,ss) 2
Robocop (2d,ss,ni) 2
Popeye 2 (1d,ds) 2
Flood (1d,ds) 2
Hong Kong Phooey (1d,ss) 2
Steg the Slug (1d,ds) 2
Panza Kick Boxing (2d,ds) 2
Cloud Kingdoms (1d,ss) 2
Cabal (1d,ss) 2
Moonwalker (2d,ss) 2
Shadow of the Beast (2d,ds,ni) 3
The New Zealand Story (1d,ds) 3
Prince of Persia (1d,ds) 3
Hudson Hawk (1d,ds) 3
Golden Axe (2d,ds) 3
Cloud Kingdoms (1d,ss) 3
Cap'n Carnage (1d,ss) 3
Impossamole (1d,ds) 3
Risky Woods (1d,ds) 3
ST Star Raiders (1d,ss) 3
Oxxonian (3d,ss) 3
Barbarian (Psygnosis) (2d,ss) 3
Barbarian (Palace) (1d,ss) 3
Cybernoid II - The Revenge (1d,ss) 3
Targhan (1d,ds) 3
Switchblade 2 (1d,ss) ..... <>Reserved<>. 3
Defender II (1d,ds) 3
Double Dragon III (2d,ds) 3
Robocop 2 (1d,ds) 3

Mr Do Run Run (1d,ds) 3
Dragon Breed (2d,ds) 3
Operation Wolf (3d,ss,nb) 3
The Untouchables (3d,ss) 3
Infestation (1d,ds,nb) 3
Scrambles Spirits (2d,ds,nb) 3
Thunderblade (2d,ss) 3
Total Recall (2d,ds) 3
Obsession (2d,ds, meg, STE) .....<reserved>. 5
Dyna Blaster [with multiplay adapter - s/bombman clone] (1d,ds,meg) 10

SERIOUS STUFF

Family Roots (1d,ss) 5
Tempus 2 (1d,ss) 5
PC Ditto 2 (1d,ss) 5
Timeworks v1.12 (5d,ss) 10

BOOKS

Atari Discovery Pack Manual 2 - STOS The Game Creator Manual 3
Atari Discovery Pack Manual 3 - Neochrome/FirST Basic etc 3

HARDWARE

Multiface ST 'Ripper Cartridge' (NSTE) 20
520 STFM (single sided drive) 40
520 STFM Motherboard 25
Atari ST VT100 Terminal Emulator Cartridge ..... open to offers

ATARI MAGAZINE COVER DISK's
All 1 UK pound each

Re: "Diamond Edge Patch", rcollins@freenet.columbus.oh.us scribbled the
following on 09 May 98 @ 08:08:59:

r> There is the addition of the sector editor DADE which at one time
r> was called Knife ST.

That was already there with 2.3. I believe it was added in 2.0. I was
asking what changed from 2.3 to 2.4.

r> There where some improvements to the SCSI support but it still
r> seems to bomb on Falcon IDEs when doing a SCSI mirror.

I don't have that problem here.

I too have an EZ flyer and use it to backup my TT's harddrive. All I do is set the backup mode in MagiC, select the whole partition and copy it to the flyer. Only updated files will be copied. It takes less than a minute after the initial backup.

Is there some particular feature that you need that only Interface
has? Otto's resource editor is shareware, very stable, and does
almost anything you need. Wercs and Atari's version also work fine.
(Although I've never tried the latter in a more modern setup.)

2931. ---> MEGA 3, Support needed NOW ! <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-09 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6j2d1bqbp2@heliodor.xara.net>
Source record: 101305

MEGA 2 is now added to my site, Still working on the other links so please bare with me. Or you can get MEGA 2 by clicking on the links near the end of the message.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't. There are a lot of people who have not yet seen MEGA so get downloading there or over 200 articles on the 2 discs with a nice shall which anyone can use without any info at all on it.

There are many sections in this zine, Some or 1 off and are very interesting to read, It would be impossible to list them all so heres a quick rundown. True horror/ghost tales, STOS, Tesla, Electronics, jokes and humour, Dreams what they mean and stuff, get rich, UFO articles, stories, Anti car crime, Reviews, Returned questionnaires, Science, Black holes, and much more. Simply take a look and you will be amazed on what we have found for you. There should be something for everyone in issue 2. Lets here what YOU would like to see appear !!

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced. Anything you do will be included in issue 3 which is currently been done by the MEGA team.

I want to make MEGA "YOUR" zine, so tell me what you want and we will include that page in the next issue. Any ideas not matter who obscure or small they be, are more than welcome.

Can you suggest a good articles site, Something you may think could be of interest to other MEGA readers ? No matter what it is we would like to here from you. Just look at the area of topics we are covering, You name it, we will do it. Anything you may think could possibly help please mail me the links, If I use the site I will give you credit (of course) for giving me the site URL.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it. This would be a great shame as there is now other zine like it.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time. Get on the MEGA mailing list, or ask if you are already on it just to make sure (I may have missed you off for some silly reason).

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you

wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Everyone who has sent me mail over the last few weeks has not been added to the list. If you would like to be added to the mailing list then please re-mail me so I can add you to the list. Please check if you have requested to be added to make sure you have been added.

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

Issue 3 is really taking off now, We need your suppot now ! We have had good responce for MEGA but no one knows how they can help, First of all fill in the questionnaire. I will try to suggest a article that you can write about, you then simply write it and have the sortcut to fame in issue 3.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him. If you would like to send Lee mail, Send it to me but put "FOR LEE ROUND" in the subject box and I will be happy to pass it onto him. If your interested in UFO's or related stuff then request issue 2 of UFOST now, I regret it still has not been added to my site. Send me a mail if you would like a copy.

I have issue 2 ready for E-mail should you dare to ask for it. Sorry but it has not yet been added to my site, Keep trying though !!

Here are the URL's for MEGA Disczine issue 2.

Yes, there is a problem with some messages, particularly those that
don't seem to terminate with a CRLF. And I get them occasionally.

NEWSie 0.88 has a "feature" to delete these messages. The process is
to Press Alt and Shift together, and wait until the timeout kicks in.
This should mark the message as received successfully, and allow it to
be deleted from the server.

Check out the Amiga RealAudio Page to see what those hackers have done (so far).

http://csc.smsu.edu/~strauser/RA.html

They have 14.4 RealAudio files being decoded on humble Amy 500's. I'm sure it could be done on Atari systems and clones with DMA sound or better. BTW, I am looking for an XM mod player for the Falcon. Does anyone know where I can find one?

The problem does not appear to be Hades specific. Many people reported it
meanwhile. I'm sure it's highly setup-specific, i.e. Erik probably can
change the appearance of the bug significantly (maybe even hide completely)
by changing the setup a bit, i.e. running an AUTO program more or less or
similar.

Eric you should tell your ISP to configure their web server properly. The
server does not have any entry for .lzh in it's MIME types list, therefore
it sends .lzh as text/html which leads to those problems downloading them.
They should add the MIME type .lzh as being application/octet-stream.

I downloaded it using Netscape without problems and lharc did not complain
when unpacking the archive (mymail.lzh that is, the complete package).

2946. FS (UK) 12 x Atari Mega ST, Keyboards/software unused

Newsgroup: comp.sys.atari.st
Date: 1998-05-10 00:00:00 UTC
From: Robert Clay <rclay@primex.co.uk>
Message-ID: <35562bf0.0@scooby.nildram.co.uk>
Source record: 100943
Cross-posted to: uk.adverts.computer,comp.sys.atari.st

12 x Atari Mega 1 ST. Used for 12-18 months, running point of sale
displays. Some need new PSU's, others are just fine. Keyboards never used.
All come with professional software packs, unused, unregistered, still
boxed and shrink-wrapped including word processor (Microsoft Write and
others), spreadsheet (VIP or K-Spread), database (Superbase).

Also available:
Megafile 30 and 60 hard disks.
3 x Megafile 44 Syquest drives (original cost over £900 each, can you
believe it!).
4 x Philips colour monitors and lots of serious software.
2 x drum units for Atari SLM804 laser
laser toner for SLM804
2 x CRP Digitizer (graphics tablets) with optional pucks
several "Naksha" mice
new unused Cumana external floppy drive.
Spectre GCR (Macintosh emulation)

Open to any reasonable offer for the lot, or will split and sell separately.
Buyer collects. I live in Milton Keynes.

Robert Clay
rclay@primex.co.uk

Please reply by e-mail as I rarely get on newsgroups. Thanks.

P.S. 2 Apple Macs (SE/30 and IIsi) and 3 Amiga's (2 x A1200, 1 x A4000 040)
also available.

2954. Problems with disks

Newsgroup: comp.sys.atari.st
Date: 1998-05-10 00:00:00 UTC
From: Kyn <1@2.stop>
Message-ID: <35565CC1.2F81@2.stop>
Source record: 101144

I'm having troubles reading disks. I get this message all the time:

Data on the disk in drive A: may be damaged (Cancel/Retry)

I've tested these disks and they are usually readable on my PC. It seems obvious the disk drive is damaged, right?

I don't know much about the technical side of computers. I had this idea: When the mouse begins to fail it's possible to clean it and fix it that way. I was thinking about an analogous process for my drive. This idea brings to mind 'cleaning disks' (apparently that won't do much good though).

Say I open the machine up - can I get the drive working again through cleaning it manually with something?

Alternative - buying a replacement disk drive. What sort of price would one be? Do good ones that fit in the Atari casing still exist out there?

I'm not afraid of installing it myself.

Another alternative is an external disk drive with a switch to make the computer think that it is A:\, rather than B:\. Do drives like that exist?

I don't want to buy a high density drive of course.

Another alternative is to buy a new Atari. An emulator is not an alternative.

Perhaps it is not the disk drive's fault after all. Perhaps it's a chip or some such.

Anyway, I would really appreciate some advice. (Is it a disk drive problem? What's a solution to the problem?)

2955. Re: Problems with disks

You will get this message if a sector has gone bad on the disk or disk
isn't placed into the drive.

>I've tested these disks and they are usually readable on my PC. It seems
>obvious the disk drive is damaged, right?
>
So you are using the same typeof disk that you use on your PC! If the
disks are high denisty (HD, the ones with 2 holes in) then this is
where you problem is. High Density disks have a thinner media and
hence the drives use a smaller magnetic field, the double density
disks have a thicker media and the drives use a slightly stronger
magnetic field when they write to the disk.

If you are using standard double density disks then the chances are
that you are one of the luck one that have an internal SINGLE sided
disk. Most of which have a big EJECT button centred under the disk
slot. My advice is to upgrade, change it to a double density one.

So if you try to use a high density (HD) disk, most disk drives will
have problems reading it. If you write data on them, the stronger
magnetic field can cause data curruption of the other side of the
disk. Even though the computer may format the drive, it doesn't mean
the data is secure on them.

Some double density drives can read them, my external can read them
but my old internal drive couldn't. I now have a internal HD drive and
so can get the best out of both worlds. If you want to use the HD
disks then the best bet is to get a HD upgrade kit.

>I don't know much about the technical side of computers. I had this
>idea: When the mouse begins to fail it's possible to clean it and fix it

>
>Say I open the machine up - can I get the drive working again through
>cleaning it manually with something?

Yes, if you take you time you can remove the internal disk drive and
it's mechanism and even clean the heads. I recomend that you use a
alcahol based agent so that it evaporates, aftershave is good enough
and it makes it smell:), and a cottonwool bud for cleaning the heads.
>
>Alternative - buying a replacement disk drive. What sort of price would
>one be? Do good ones that fit in the Atari casing still exist out there?

Depending where you buy it of course:) If you can get an original
Atari drive it will save cutting the case. It may be wiser to buy a
second hand machine or drive. You can expect to pay up to 25 UK
pounds, for an Atari one.
>
>I'm not afraid of installing it myself.

You can fit MOST 3.5" double density drives, they don't have to be
made for the Atari; there are some drives that DO NOT register when a
disk has been changed, that includes some sold for the Atari. This can
cause problems.

There's no problem with installing it yourself, I knew a company that
refused to sell a seperate disk drive without fitting it themselves,
and making over 100 uk pounds profit! Only 3 screws hold the drive in
place, and then only and then only 2 connectors; one for power and the
other one does the biz (called a SCHUGART inteface). The power lead
will only fit one way round, the other can fit either way on some
drives. If you fit it wrong all the odd number pins are earth/shield,
so all you will get is the drive motor going continously; turn the
connector around and everything will work fine.

If you have to upgrade from a sing'e sided drive you are going to have
to cut the case, or if you live in the UK drop me a line as I have a
double sided case somewhere.

If you want to upgrade to HD, then you'll follow the instructions on
the kit.
>
>Another alternative is an external disk drive with a switch to make the
>computer think that it is A:\, rather than B:\. Do drives like that
>exist?

Yes, some exist; the switch is called (usually) a 'boot from drive B'
switch. There are some programs that will do this as well, but that's
no consilation if you internal drives not working.
>
>I don't want to buy a high density drive of course.
>
>Another alternative is to buy a new Atari. An emulator is not an
>alternative.

If the motherboard is at fault, buy another motherboard! Atari's are
cheap enough nowadays, so why not have one in the cupboard in case one
decides to have a day off:))

>
>Perhaps it is not the disk drive's fault after all. Perhaps it's a chip
>or some such.

I've never come across a faulty FDC ic, but I would geuss that you
will NOT have any drive icons on the desktop if this would fail; as
this is polled to see what is connected to the computer (I think).
>
>Anyway, I would really appreciate some advice. (Is it a disk drive
>problem? What's a solution to the problem?)
>.

I hope I have been of some help, if I can be of further assistance
please let me know.

Hi Mike

On 10 May 1998 00:07:06, Mike Thomas wrote:
>I just got two ST's, 1 is a 1040STF and the other is a 1040STFM, what is
>the difference between these two?

Okey, they both have 1 meg of memory. The letters after the 'ST' mean
the following:
F = floppy drive
M = modulator (rf output for telly connecting)
E = enhanced

Eg. STFM = floppy drive & modulator.
STE = enhanced

Most STF's have a built in floppy, but I have come across one that
didn't.

If the ST has no built in disk drive, i.e. the ancient ones:), the
internal structure is different; the keyboard, motherboard etc. as it
has a smaller casing.

And finally, more than likely the TOS system will be TOS 1.09.

And if you are really lucky and have one of the first models, you may
have a socket for a tape player to be plugged into; as most people
used cassette storage for other computers when the ST emerged. This
was situated at the back right-hand side (near the serial socket).
>
>I also got a SH204, but no cable, is the cable for this just a straight
>thru cable?

The SH204 is a 20meg (wow!) MFM hard drive, and the cable just plugs
into the hard drive socket and the SH204, and that's all.
>
>Lastly where can I get a mouse for the ST?

Try looking for an Ameaba (sorry! cough haMiga) replacement mousey, as
these usually have a switch to change computer. I have a mouse here
that has the usual Ameaba and ST switch but also alongside the ST it
also says PC, I wonder if a PC serial mouse would work on the Atari's?
I haven't one to try out, it would be a life saver more a lot of users
it they can:)

If they can, can someone drop me an email with details, tanx:)

Never used it, but it's a German WP. I *think* you might still be able
to get it (from ASH?). I do know that Papyrus will import Signum
files, though (and use Signum fonts, too).

Have you used the free software made of Japanese?
It is the software for ATARI ST.
The explanation is all the English.

The real time monitor of MIDI.
The high speed text viewer that operates with the mouse.
The setup dated an easy day.
The Japanese word processor.
The text viewer of Japanese.
You will admire an advanced completion degree.
etc.

Japanese programed this it is not believed how.
Welcome!

Probably because we're fed up of seeing the same or similar long
posting about the dratted thing every other day (sometimes twice a
day, for pity's sake). And no I haven't downloaded it and won't be
doing so as a deliberate response to this onslaught which is rapidly
starting to resemble spam. One announcement per issue would be more
appropriate IMHO.

All D-LAB programs are in indexed in the UTSI and all are very well
made though they are intended to run in ST high resolution.
A pity: the author don't answer to emails ...

Terry,

Interesting idea. I'll have to go back and re-read that part of the
MagiC manual.

I still like Geneva more than MagiC (no major reason, just personal
preference), but I find I'm using MagiC more and more because of
things that just plain run better under MagiC.

I suppose that you could even write a small batch file to automate
the process.

Thanks for the tip,

Joe Mirando @ STReport

same kind of answer as the grep story to find strings of text in
files.
cat is the answer here: (unix tool, there is a version for mint, don't
know if it works under plain singletos but I don't think so).
cat filename1 filename2 filename 3 >> newfilename
or if all have a look alike:
cat filename* >> newfilename

>or his ISP.

I am having similar problems except that it collects from 2 or 3 NG's
and posts to yet another. What really interests me is reference to
problems with .cfg and .scr because I have STe, 1.62 4 meg with
upgrade board to 33.6. Board is switchable between original 19.2 and
33.6. I cannot use 33.6, mail collection impossible with Newsie. It
slows to 5/6 items in 10 minutes with Popwatch and CAB - forget it!
Switch back to 19.2 and reset .STX and problems disappear.

Originally thought board problem but in view of the above I'm not so
sure now. Could it be the .STX?

How do you check the speeds? Newsie doesn't according to my .log file
(all boxes 'x' in pref. file though).

What is a VJHC please?
>

>What I've found, is that something is wrong with their STinG/NEWSie/CAB

The patch can you find on the Belgian ftp-site
193.190.205.13 atari/incoming/patches. Look for de204pat.zip

It's also on "ftp.lip6.fr pub/atari/disk" and "ftp.funet.fi pub/atari/Newitems"

I thought I saw a while ago a posting in this group saying that
partition >512 couldn't be handle, but ofcourse I can be wrong.

That is what I thought but CALFAX.CDT seems not to work om my Hades.
Wait a minute..... The driver I initialy used and which doesn't
work is CAL_FAX.CDT. This seems to be a Starcall Pro-Fax driver.
You're talking about a QFAX driver. So obviously CALFAX.CDT isn't the
same as CAL_FAX.CPD (yes CPD not CDT).
Luckly I found the driver you mentioned somewhere on my software
collection. It is a different driver indeed and above all it works.

Thank you. Once more this groups has proven to be very useful.

Michiel,

The only way I think you could do it would be to export your LDW file as a 123.WK1 file, you should have a conversion prg. with LDW. Hopefully Excel can import WK1 files. The only other way would be to export your data as ASCI text.

Hello there, I'd like to set up my Falcon with a Nemesis accellerator,
but I'm wondering how compatible it is with cubase audio? Does anyone
have some experience with this type of set-up? I would mainly like to get
the extra screen rez. from Nemesis/ Videlity.
I am using a Falcon (Atari) with FPU and 14 meg wizztronics memory board.
Any help is much appreciated.
Mark

2980. Linux/m68k (a free Unix-like OS for Amiga, Atari and VMEbus) MiniFAQ

URL: <http://www.clark.net/pub/lawrencc/linux/faq/faq.html>
Current-FAQ-Version: 2.0.35 (Sun, 10 May 1998 11:18:51 CDT)

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of Linux, a UNIX-like operating system
distributed under the terms of the Free Software Foundation's GNU
General Public License, to computers using the Motorola 68020, 68030,
68040 and 68060 CPUs. Current releases support Amiga, Atari and
Motorola VME systems (MVME 147, 162, 166 and 167); porting efforts are
underway to the Apple Macintosh and various 680x0-based workstations
(at present, the HP 9000/300 series, HP/Apollo Domain series, NeXT and
Sun 3 series). Efforts to port Linux/m68k to other 680x0-based
systems are also encouraged.

The current, complete FAQ is available on the World Wide Web at:

http://www.linux-m68k.org/faq/faq.html (Master site, The Netherlands)
http://www.clark.net/pub/lawrencc/linux/faq/faq.html (USA)
http://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/faq.html (Germany)
http://amiga.nvg.org/linux/mirrors/lawrencc/faq/faq.html (Norway)
http://www.uk.linux-m68k.org/faq/faq.html (United Kingdom)
http://www.se.linux-m68k.org/faq/faq.html (Sweden)

Conversions of the FAQ into various formats (plain text, PostScript
and DVI) are available at:

ftp://ftp.clark.net/pub/lawrencc/linux/faq/
ftp://ftp.uni-erlangen.de/pub/Linux/LOCAL/680x0/FAQ/
ftp://tsx-11.mit.edu/pub/linux/680x0/FAQ/ (and all tsx-11 mirrors)

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Christian Jacolot a traduit le FAQ en francais. On peut le retrouver
a: http://web.cnam.fr/Comp/Atari/Linux68k/Faq/

More information about Linux is available on the Internet at
http://www.linux.org/; the Linux/m68k Home Pages are now located at
http://www.linux-m68k.org/, with several mirror sites worldwide (see
http://www.linux-m68k.org/mirrors.html for details).
```

Questions and comments about this post or the FAQ may be directed to
me. General questions about Linux/m68k may be posted to the Usenet
newsgroups comp.os.linux.m68k (English) and maus.os.linux68k
(German). Si vous parlez francais, on peut utiliser le newsgroup
fr.comp.os.linux.

Re: "MagiC bootup", Harry Sideras scribbled the following on 10 May 98 @ 04:14:14:

kh>> Is there any _good_ GIF and JPEG picture viewer for use under
kh>> MagiC on a Falcon?
HS>
HS> 1stGuide for JPGs - quick, clean and small.

I'd have to go with the Apex viewers. Not only are they quick, clean and small, but they automatically change res, so no dithering is necessary. And the JPEG viewer even does a clean scale to make the pic fit the screen (the GIF viewer has smooth scrolling).

2982. Mummies Playtime Beta V0.1

Newsgroup: comp.sys.atari.st
Date: 1998-05-10 00:00:00 UTC
From: Deano@zetnet.co.uk
Message-ID: <3558e713.26115477@news.zetnet.co.uk>
Source record: 101172

Hi all, I have my game Mummies Playtime in a workable state at the moment and I am looking for people to test it. Download it from http://www.users.zetnet.co.uk/sillysoftware/Playtime.zip

Note it has only two sub games at the moment and no sound and its not a big file so should'nt take too long to download. The colour goes a bit funny under Pacifist v0.48 as well. Can someone test it on STFM's, STE's, Falcons, and Pacfist (especially V0.46) and let me know if you find any bugs or can suggest some improvements. Please reply to Deano@zetnet.co.uk

> SYBACK, and found them wanting in several areas.

I just use STZIP 2.6. I have an external hard drive setup (in an ICD expansion box) that I use strictly for backups - it has enough room for two complete sets from my internal hard drive. ZIP archives take up far less space than ELFBACK or DIAMONDBACK archives. Once I've done a complete backup, you can set STZIP to add only those files that have changed since the last backup (update mode).

For a third backup, for long term storage, I'll do a complete backup to a ZIP archive, and then segment these large files with "SCHNIPP" to put the segments onto floppies. Doing it this way take far less time than using ELFBACK.

I moved a year ago and was very paranoid about losing data while my computer sat in a box in a moving van. I decided not to take my hard drive out of the machine, but rather to take my ZIPed and SCHNIPPed archive in my personal luggage when I travelled. The computer arrived in fine shape, with no data loss, but it was nice to have the archive anyway.

John, this might sound odd, but its what happens with my setup.
When I run in SingleTOS, I have this happen occasionally. I can
then run Newsie under NeoDesk/Geneva, and it will always delete
the rogue message. Strange, huh? I'm using a Nemesised Falcon.

Can anyone else verify this. Wait to you have a message that
won't delete under SingleTOS, then run Newsie from a multitasking
OS and see if the message gets deleted... ;-)

Kevin, I'm fairly sure that you are not supposed to low-level format IDE drives. All you have to do is partition them and install your HD driver...

Somebody else correct me on this! (I do believe that some drives will take formatting, but if its not one of those, then you risk damaging the drive-I lost 52 megs of 270 on an internal 2.5" IDE drive like this-had to turn it back in) Good luck.

Message-ID: <3555854B.E7DD57D7@francenet.fr>
Source record: 101181

I think it's the drive. If you can't find a DD drive, I think a HD drive will work too. These drives are very cheap (let's say $10-$20). You only have to open the computer with a screwdriver, unplug the drive (the power and the flat cable), plug the new one at the same place, (test it before closing the computer ;-) and then close the computer.

You can bring your computer when buying the driver, so you can test it in the shop.

regards

Eric

>I just got two ST's, 1 is a 1040STF and the other is a 1040STFM, what is
>the difference between these two?

The "F" means it has a built-in floppy drive.
The "M" means it has a built-in TV modulator, making
it possible to display an ST LOW or ST MEDIUM
screen on any television (usually channel 2 or 3).

>I also got a SH204, but no cable, is the cable for this
>just a straight thru cable?
>
>Lastly where can I get a mouse for the ST?

Check out the list of Atari computer dealers at
my web site:
http://www.tmisnet.com/~strads/hq/sources.html#Dealers

They should be able to help with a replacement
mouse and cable.

I think that you are correct Harry, I remember that we put Neochrome 2
into our library and got our wrists slapped hard for it by Atari, they
have also stated they they own the copyright to board games which have
been around for centuries e.g Chess, They can probably therefore be
held partly responsible for the lack of development by the enthusiast
of software which would have kept the St a little bit more popular.

>a folder into a single file?

What I usually do is use Everest or Firstword Plus. All you have to
do is open a new file with the name for the amalgamated files then
choose the first file by "Merge" with Everest or "Read" with First
Word Plus and it will automatically be added to the new file wherever
the cursor is at the time.

Continue doing this until you've got them where you want them. You
can edit, cut, copy or paste them all as necessary with either
program.

Hope this helps.

Regards

Trevor

Hmmm! Let me summarise things a little; you are using double density
disks and if the pc gets at them they are them bad.

After the pc fails with the disks, does the ST read them okey?

A disk drive can write, read and even format disks with no apparent
problem, until it is read or accessed by another drive. This most
commonly happens when a drive goes slightly out of alignment.

There is no reason why you shouldn't be able to transfer data using
720K disks between the ST and PC. I have even used an extended
formatted disk, and slapped an ms-dos boot sector on it and was able
to use the disk.

I would suggest that you format a disk using the pc and fill it up
with files, text ones would be a good idea. Then get hold of another
drive or get a friend to read the disk, if all is well do this with
the ST. This way you should be able to work out which is the fauly
drive.
>
>It seems that the only solution for me is to get a high density drive
>for my ST.
>Buying a new ST would not likely help at all.

I wouldn't do anything until you find out what the problem is, it's
pointless changing something that doesn't need changing.
>
>Have any other people had this experience of PCs corrupting their ST
>disks? What solutions are there? I can think of--buying a HD drive for
>the ST, or connecting ST and PC by a cable.
>.
You can connect the two machines together using a null modem. I have
tried Ghostlink but couldn't get it to work.

In my experiments on trying to get my newly aquired cd-rom drive
working, I wanted to format my hard drive a few times. I use a null
modem and a terminal program on each machine to use the pc's hard
drive as a back-up device.

I'd love to the idea that ghostlink uses, I would also love to get it
to work.
Cheers! for now
Steve

3000. Free New Game 'Chaos 2'

Newsgroup: comp.sys.atari.st
Date: 1998-05-10 00:00:00 UTC
From: martin.w6@ukonline.co.uk
Message-ID: <3556234a.7441129@news.ukonline.co.uk>
Source record: 101190

An update on the classic Spectrum game 'Chaos'

Just send a disk (preferably full of the latest or your favourite PD)
and a SSAE.

In case you haven't heard of Chaos before its a strategy game with
wizards.

Its a STFM game and is not restricted in any way however there is a
enhanced STE only shareware version which costs ?2.50

Write to;

Gary Pinkett
95 St Andrews Road
Yeovil
Somerset

Please note: I'm just forwarding this message don't email me regarding
this as I won't be able to help you and don't have a copy to upload or
email.

>
> Any suggestions?

Buy Kobold v2.5, the high-speed file copier which can also do
incremental backups. In NeoDesk, you can even install Kobold by running
it as an accessory and having 'Use Kobold for file operations' selected.
This way most common file operations in NeoDesk are automatically
handled by Kobold instead of the slow GEMDOS routines (something Geneva
doesn't replace, unlike MagiC). The difference in speed while copying,
moving or deleting files is stunning. This feature alone is worth the
cost, but like I say Kobold can also do backups (including the use of
batch files). Another nice feature is Kobold's 'identical sequence'
mode, perfect for backing-up the boot partition, where running order is
important. And, of course, it runs under MagiC (Kobold v2.5 doesn't
support long filenames, though).

Hi , I'm over due to catch up on my P.C. friends with the Web Surf stuff
so I'm lookin for CAB or somesuch to get my Falcon happening on the web.

CAN YOU GIVE ME A CAB ADDRESS

or

ADVISE

Thanks Steve

3003. ---> MEGA 3, Support needed NOW ! <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-10 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6j2sf1$du4$1@heliodor.xara.net>
Source record: 101320

MEGA 2 is now added to my site, Still working on the other links so please bare with me. Or you can get MEGA 2 by clicking on the links near the end of the message.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't. There are a lot of people who have not yet seen MEGA so get downloading there or over 200 articles on the 2 discs with a nice shall which anyone can use without any info at all on it.

There are many sections in this zine, Some or 1 off and are very interesting to read, It would be impossible to list them all so heres a quick rundown. True horror/ghost tales, STOS, Tesla, Electronics, jokes and humour, Dreams what they mean and stuff, get rich, UFO articles, stories, Anti car crime, Reviews, Returned questionnaires, Science, Black holes, and much more. Simply take a look and you will be amazed on what we have found for you. There should be something for everyone in issue 2. Lets here what YOU would like to see appear !!

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced. Anything you do will be included in issue 3 which is currently been done by the MEGA team.

I want to make MEGA "YOUR" zine, so tell me what you want and we will include that page in the next issue. Any ideas not matter who obscure or small they be, are more than welcome.

Can you suggest a good articles site, Something you may think could be of interest to other MEGA readers ? No matter what it is we would like to here from you. Just look at the area of topics we are covering, You name it, we will do it. Anything you may think could possibly help please mail me the links, If I use the site I will give you credit (of course) for giving me the site URL.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it. This would be a great shame as there is now other zine like it.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time. Get on the MEGA mailing list, or ask if you are already on it just to make sure (I may have missed you off for some silly reason).

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you

wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Everyone who has sent me mail over the last few weeks has not been added to the list. If you would like to be added to the mailing list then please re-mail me so I can add you to the list. Please check if you have requested to be added to make sure you have been added.

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

Issue 3 is really taking off now, We need your suppot now ! We have had good responce for MEGA but no one knows how they can help, First of all fill in the questionnaire. I will try to suggest a article that you can write about, you then simply write it and have the sortcut to fame in issue 3.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him. If you would like to send Lee mail, Send it to me but put "FOR LEE ROUND" in the subject box and I will be happy to pass it onto him. If your interested in UFO's or related stuff then request issue 2 of UFOST now, I regret it still has not been added to my site. Send me a mail if you would like a copy.

I have issue 2 ready for E-mail should you dare to ask for it. Sorry but it has not yet been added to my site, Keep trying though !!

Here are the URL's for MEGA Disczine issue 2.

ftp://ftp.funet.fi/pub/atari/mag/mega/mega2_d1.zip

ftp://ftp.funet.fi/pub/atari/mag/mega/mega2_d2.zip

Thanks to Deano for the upload of issue 2.

Visit his site at....

>the carrier ??? Hmm.
>
As I had been having very LONG TIME file transfers, I had set it going
and went and had me something to eat and do a few other things, most
of the transfers had been 1.5 to 2 hours up to then. But in this area
anyone can lose the carrier when the wind is blowing 40 to 45mph like
it's doing right now. I've lost carrier three times today alone.

>> Plus, how many times have you found a used modem to buy and it
>> has '0' docs? (hmmm ... reminds me of CAB!).
>
>Apart from the send and receive LEDs, the LEDs have standard labels which

>
>
But I've worked with enough modems to know the AT command set is NOT
always the same between modems. The modem I have on my Falcon has some
builtin settings that unlike the ones on this modem which uses nph
compression instead of the v42bis the other one uses. That's MNP
compressions or error checking. something like that.

3008. FS Misc ST HW+SW (USA)

Newsgroup: comp.sys.atari.st
Date: 1998-05-10 00:00:00 UTC
From: aa778@cleveland.Freenet.Edu
Message-ID: <6j35v1dp1@pale-rider.INS.CWRU.Edu>
Source record: 101325

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
440-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Syquest 5 1/4" 44 meg removeable cartridges. Will be HDX formated and
verified good. each $20.00

Atari SC1224 Color Monitor. Unit is in perfect working order.
Comes with power cable. $50.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $55.00

Supra 2400 baud external modem. No power supply. $3.00

Fast Fax by Michtron. This is the original fax hardware/software
for the Atari computers. Works with ST 520 to Falcon. This is a
special Michtron 9600 Send/Receive Fax Modem with software. The
software is very efficient, powerfull, and simple. Send, receive,
view, log, and print, faxes. has drivers for popular printers and the
SLM804/SLM605. Use a spare 520 or 1040 as a stand alone fax machine.
Comes with special fax modem, diskettes, and manual. $35.00

SuperCharger by Beta Systems. This was one of the better IBM
emulators for the ST. Best part was this was an external unit
that plugged into the ST's DMA port and had it's own power supply
so as not to put any stress on the ST. This is an XT emulator
that is twice as fast as a regular IBM. The external box CPU is
housed in a beige case with a data and power lights, also has a
reset button on the case. The case has a DMA passthru port to
allow connection of other devices. Comes with all diskettes,
MS-DOS 4.01, a copy of the instruction manual, power supply
and DMA cable. You can have IBM and ST partitions on your hard
drive and hot key between DOS and TOS. When the IBM emulator
is not in use the 1 Meg RAM in the CPU case can be used for a
fast RAM drive under TOS. $55.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $9.00

Gold Rush by Sierra. Complete with box, docs, and disks $9.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Plan 9 From Outer Space by Gremlin. Complete with box,
docs, and disks. $15.00

MISC SOFTWARE

Moving Pixels CD-ROM. This CD-ROM has Tony Barker's programs
and source code from all the programs he ever wrote for the Atari.
Includes programs like Atax, Brushworks TT, MIDI Battle, Offical (The
official Falcon Demo used by Atari), Tina (The 70 meg Tina Turner TV
comercial), TT Wars (The Star Wars Demo) $15.00

ST Control by Trio Engineering. A BASIC like language that
is closer to using normal language to program. Example
"Draw picture with Neochrome" Includes box and diskette
no manual. $5.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $1.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

Source record: 101328

Hi k_hampf@yahoo.com, on 07 May 98 you wrote: ...respect, brethren
kh>
kh> How can I get to bypass the IDE drive in Falcon using MagiC?

You need MPATCH20 by Daniel Hedberg of New Beat Development.

I'd guess you can get it at his Web page:

http://www.kuai.se/~dhedberg/

kh> Then also, I need to shift the screen to the right when using bigger
kh> desktop sizes, and I'm using SWIDTH.PRG to do that.

Eh? I've never heard of this problem (or solution!). Doesn't your monitor
remember its last screen positions for each frequency?

kh> If I do a resolution change MagiC runs two copies in the START
kh> directory, but when using JPEGView (that changes resolution by
kh> itself) I can't get it back to normal without running SWIDTH
kh> manually. Is there any easier way?

Hmmm... doesn't Shutdown handle this SWIDTH program then? Try putting the
following in SHUTDOWN.INF so that the first SWIDTH is closed down before it
gets started up again after the resolution change:

terminate SWIDTH

kh> Is there any _good_ GIF and JPEG picture viewer for use under MagiC
kh> on a Falcon?

1stGuide for JPGs - quick, clean and small.

kh> And, finally, how can I get Mouse 2.5 to autoboot under MagiC 5.20?
kh> I can't get it to work unless I start it manually, and that's
kh> annoying, since MagiC isn't that stable in my opinion, and I perform
kh> a thousand reboots at one session.

Do you use the #_AUT line in MAGX.INF? If not, you may be able to install
MOUSE26 there to autoboot:

#_AUT C:\MOUSE26.PRG

HTH

B^{<

It's 26.50ukp from Floppyshop at sdelaney@zetnet.co.uk but must also be
available from Falcon Pro Centre too for possibly less?

h> And are there other serious alternatives apart from "Interface"?
h> How about "WERCS"?

Only Resource Master and Interface handle colour icons. Interface does it
better and has a full and extensive printed English manual.

Good question. I ordered my upgrade shortly after the 2000 version was reviewed in Atari Computing and got v7.1 ...

That said, people seem to be mentioning the 2000 as being available now and being that FaST Club are the distributors over here I guess they'll have that too.

To be sure I'll check with Paul...

mb> an optional box: environment, but in the thing.hyp no explanation or
mb> example of how to fill it in.

If an environment variable is applicable to an application I believe it
usually does get explained. It's not up to Thing to say what envs should be
set up - it's up to the application that can be called in this way.

The dialog requires you to quote the keyword that identifies the application
to be called and then the full path and filename by which it can be found.
So, in the case of (for example) STGuide you get a whole list of keywords and
explanations of what they should be with and why:

=====
The following environment variables are evaluated by ST-Guide:

PATHS
HCP
HYPFIND
HYPFOLD
REF Important access paths
REMARKER
EXTVIEW
DEFHYP
HYPTOP
PRINTER
MARKFILE
<ext>

TXTCOLOR
REFCOLOR Only relevant for colour display
BCK3D

FONT
XFONT
```

WINSIZE Appearance of the ST-Guide window display
TXTOFFSET
TABSIZE

RIGHTBACK
REFONLY Mouse-behaviour
BACKWIND

HCP_OPT
ARROWPATCH Miscellaneous
NOREFBOX
$<name>

Example of the construction of a line of this file:
...
HYPFOLD=C:\GUIDES\
...

The entire file is line-oriented, and there must be no surplus spaces in the lines. The syntax is:

<Variable>=<Value>

Note that there may be no spaces before or after the '=', and <Variable>, and <Variable> must not be enclosed in angle brackets or quotes.
=====

So, when you're adding these to MAGX.INF you use statements as follows:

#_ENV PATHS=C:\GUIDES\
etc

In Thing, I guess you don't need the #_ENV part.

If a program doesn't mention an environment variable then clearly you can't use one. There must be something quoted in the ASH Emailer docs to indicate an env, or if not then a menu option that allows you to point URLs to CAB itself.

Hi,
do you know if the patched Diamond edge can handle over 512meg partitions.
I've had a lot of probs using large partitions over 512 meg (de fragging
etc). Where can we obtain this patch?
Thanks.

Never heard of an STFM?????? It's generally accepted as the most widespread model, the good old ST with integrated floppy and RF Modulator (from circa 1987 to the introduction of the STE). Anyway, STFMs all have TOS in ROM, that's why I didn't mention it.

>
>So the guy should switch it on and wait until some picture (not just the white

Well, my pre-2.06 TOS machines have always booted with a blank white screen, nothing else.

Never seen that, but then again, I've never seen any of the oldest TOSless machines.

Cheers,
Nick

Even if they was such an adaptor, do you have any ideas as to what
resolutions you would be running on a 50Hz RGB monitor ? An SC1224 couldn't
even display the ST's 640x400 res, so you wouldn't go far with it on a Mac.

You'd be better off with a cheap 2nd hand Mac screen, beleive me.

3025. Re: Problems with disks

Newsgroup: comp.sys.atari.st
Date: 1998-05-11 00:00:00 UTC
From: Kyn <1@2.stop>
Message-ID: <3556A386.6276@2.stop>
Source record: 100949

Hi. Steve, I have an STe- DD drive, and I am only working with these (no high density or single density usage).

My ST drive seems to be in fact fine. I can run programs and copy disks. The source of the problem is my HD PC drive.

My PC is good at reading ST disks, but if it writes to them they are half ruined.

That is to say, they are okay in my PC drive (I can use them with ST emulator PaCifiST), but if I put one of these disks in my ST, it gives me the "Data on the disk in drive A: may be damaged (Cancel/Retry)" message. In other words, my ST is good at reading straight ST disks, my PC is good at reading my ST disks, but my ST doesn't like disks that have been touched by my PC. I tried to copy the PC files to disk via PaCiFiST (an emulator), but that gave exactly the same result.

You usefully write:

> So you are using the same typeof disk that you use on your PC! If the
> disks are high denisty (HD, the ones with 2 holes in) then this is
> where you problem is. High Density disks have a thinner media and
> hence the drives use a smaller magnetic field, the double density
> disks have a thicker media and the drives use a slightly stronger
> magnetic field when they write to the disk.

Although my high density PC drive can write to double density disks, the way it does it is incompatible with how my ST reads disk. A hypothesis: PC DD drives can't read PC DD disks that have been manipulated in a HD drive. Actually that sounds unlikely; perhaps my PC HD drive just happens to (unfortunately) be a quirky one.

It seems that the only solution for me is to get a high density drive for my ST.
Buying a new ST would not likely help at all.

Have any other people had this experience of PCs corrupting their ST disks? What solutions are there? I can think of--buying a HD drive for the ST, or connecting ST and PC by a cable.

Hi Chris,

I've not read your Disczine, but perhaps I would if it were not a
"Disc"zine. I don't want to download a couple of disks worth of data,
uncompress it, then search for articles that I -might- want to take
a look at.

Why don't you put a table of contents in HTML, then let people
download individual articles as desired, rather than two disks?

Just a suggestion,

Michael White (michael@fastlane.net)

Hi Michiel, on 09 May 98 you wrote: ...respect, brethren
dm>
dm> I want to use my Atari sreadsheet LDW files in MS Excel.
dm> Can Anybody tell me how to do this?

Do you still have the LDW program? Take a look at the export options or any
conversion utilitities and compare the formats to the import options of Excel

Alternatively, Texel on the Atari can import LDW files and (even at v1.60r5)
export as DIF or CSV at worst, which'll get into Excel. Someone may offer to
do that for you...

That's a good idea. I'm sure there can be a common bond between Atari and
Amiga users when it comes to breaking a Gates-led monopoly on a file format.
Perhaps the code could be shared if it's on C or 68k.

Any takers?

(I can't believe I suggested that - my acount must've been hacked <g>)

I have a question ... Why does Newsie 0.88 access the A: Drive every time I delete a message when reading them offline? The 1st time I usedNewsie 88, it told me to put a disk in drive A: and I notice that every time I delete a message, the A: drive access light comes on and the drive spins. I've checked everything I know of and don't see anything that deals with A: drive. So, What's up? and WHY?

> will anything else formatt ide?

HDDRIVER 7.5 (i. e. the HDDRUTIL coming with it) will. But I strongly
recommend not to format IDE drives except you are absolutely sure they
won't be damaged by it. Unfortunately there are some (especially older)
drives that are damaged when formatting them.

Someone brought up the subject of conversion of LDW files and I came to think of that I've got a similar problem. How am I supposed to use VIP Professional spreadsheet-files on a Mac or PC? The other way around is easy, VIP can import Lotus 1-2-3 files. I like VIP and have used it on a Mega 2ST, but using it on a Falcon is a bit messy, what other choices are there for spreadsheets?

Daniel L. Dreibelbis <dreibel@idirect.com> wrote:

: you know, there's really nothing wrong with the Intel processor,
: just the operating system on top of it.

You should have a look at the Linux sources. They have implemented so many work arounds to bugs in the Processors. The point is that these CICS Processors tend to become compilcated. That is I think the main reason why Motorola discontinued the 68k - line. A RISC processor is much simpler and therefore you can make fewer errors. You cn also implement many more tricks (wich isn't done in the PowerPC very much by now) to speed it up because there is enouch space on the die. Intel tries to implement these tricks in a CISC Architecture. The Pentium II is a superscalar Processor with loads of first level Cache and a Backsinde second Level Cache running at Proceccor clock speed. The Alpha doesn't have the fast second Level Cache, th PA doesn't have any built in cache at all, but a backside architecture for external Caches, the StrongARM isn't even superscalar. All these processors outperform the Pentium II at the same clock rate. All "standardized" hardware around these Processors is much more inteligent than the old PC Architecture. The Hades proves what an inteligent Board does to the Performance. A PC Freak at our Work once saw the Hades at a shop and told me that this machine simply outperforms current PC Hardware.

So that is wrong with the Intel Processors.

3039. Problems solved! Was: Re: Problems with disks

Newsgroup: comp.sys.atari.st
Date: 1998-05-11 00:00:00 UTC
From: Kyn <1@2.stop>
Message-ID: <3557C7DF.5C7@2.stop>
Source record: 100963

Thanks to those who offered suggestions. I solved the problem myself today. As a reminder of the situation I faced:

--If I put a working Atari disk in my HD PC drive, and wrote to it, it would get half corrupted. I first was led to think that my Atari drive was at fault, because the 'corrupted' disk would stay readable in the PC. So I thought maybe I should get a HD drive for the ST. That probably would have been a valid solution, but I found a better one.

Instead of using my PC's HD drive, I went to school and used one of theirs.

(I copied some ST programs off my hard drive. They were unreadable in my ST. So I put the disk in a school PC and copied the files to the hard drive, reformatted the disk, and copied the files back. They were then readable in my ST. Success!)

Conclusion: My PC drive is indeed quirky.

Well, thanks again for the help. It was interesting to hear about magnetic fields and HD disks.

Callum Lerwick (look@my.sig) wrote:

: It would be an interesting to port mpg123 to the ST.

Hmm. I compiled mpg123 on my Falcon (16Mhz, no FPU). It took about
six hours to decode three minutes of MP3...

: I don't think an ST has a chance at realtime... :P

Nope. The Falcon may be able to do realtime MP3 decoding using the DSP
and the CPU (the current MP2 decoder hardly uses CPU time),
as soon as someone feels like implementing it... (The Falcon MP2 player
sources are available, as are sources for MP3 players...)

: I suspect something with an FPU would help quite a
: bit... Using MP2 may help too. Anyone know where to find an MP2 encoder?

There's an MP2 encoder freely available somewhere, try a websearch using
Altavista (that's how I found it). I think it's even been ported to the
Atari as well (can't remember where I saw it, maybe at ftp.lip6.fr...),
but it takes about a day to encode a typical MP2 file :)

: Hey all you Linux m68k users, grab a copy of mpg123, I'd like to know what
: the minimum CPU is for playing low-bitrate Mpeg...

About a 486-66 I think (according to the docs). And I think a 486-33 might
just be able to handle low-rate mono files :(

I just read your post, after writing "Problems solved!"

> I would suggest that you format a disk using the pc and fill it up
> with files, text ones would be a good idea. Then get hold of another
> drive or get a friend to read the disk, if all is well do this with
> the ST. This way you should be able to work out which is the fauly
> drive.

I thought it would be interesting to add here, even though the problems are gone, that other PCs read my PC disks "perfectly" (--seems that way), including the ST ones my PC has touched.

I think that my drive is just slightly different from the standard, and my ST picks up on this.

> A disk drive can write, read and even format disks with no apparent
> problem, until it is read or accessed by another drive. This most
> commonly happens when a drive goes slightly out of alignment.

That's helpful. I now think that the difference between my PC drive and the ones at school is a slight difference in alignment. I'm not sure if my PC has "gone out of alignment", or if it was always that way. I don't think I've ever tried writing to disks intended for the ST (until recent times). I suppose that it is most likely that it has in fact gone out of alignment--curiously though, it has a younger drive (by several years) than my ST.

: bit... Using MP2 may help too. Anyone know where to find an MP2 encoder?

How about QuickTime3.0. It is not only a complex pice of software, but also
a grat Format for Media Data. The MPEG consortium has acepted it as a starting
point for MPEG4. AFAIK it is also documented.

I don't have the time. If i had it, i would have contacted Apple in order
to ask them for support porting the whole stuff to Linux and TOS. Maybe someone
is going to do it. I can assist a litle bit, because i have at least little
experience with it. First thing I would do with it would be a GEMSCRIPT
scriptable Multimedia Authoring tool that feels a bit like Director and
uses Quicktime as the foundation. Then I would love to port it to Linux
using another scripting mechanism. If apple whants to really support me
I would perhaps even do a Mac and a Windows version with Applescript and
VBA as scripting languages.

> I forgot to say that with my settings, init1.3 should (as with old
> init1.0) write:
>
> "Bonjour, qui es-tu ->" (hello, who are you ->)

For those interested, I solved the problem.
The faulty program was GETTY, not INIT!
Indeed, the new /etc/getty didn't read /etc/gettytab nor /etc/ttytab.
More over, it couldn't handle my keybord, it seems...

So I took back my od /etc/getty, which write on the screen:
"Bonjour, qui es-tu ->" and not "@log%$:#" (understand "login:")
No "/pipe/log file not found" any more.

At least I can une init1.3 :-)

Yves.

Your problem of understanding is the fact that in Germany the 1040 STFM
was the standard and in France the 520 STFM.
Personally I have never seen a sort of 520 STFM in Germany until the
appearance of the 520 STE.

> Where can I have this update for my TT ?
> I just have the 2.60 version ...

Gerhard told me that 2.67 -- a "test version" -- is available on Computerinsel's BBS, but I was just there tonight for the first time and couldn't find it. Perhaps one has to be validated before gaining access to certain file areas, like the one containing NOVA VDI drivers? But I did manage to update my HP scanner driver using the BBS.

File Areas:

2 ... NOVA Utilities 5 ... Photo Line Win95/NT
6 ... Sonstiges 7 ... NOVA Scannertreiber
11 ... NOVA - Programmiertools 18 ... PHOTO LINE 2.2
20 ... Monitorbibliotheken 24 ... Spiele fï¿½r Grafikkarten

The BBS's phone number is ++49-9445-953149. I checked all the file areas above with no luck.

What is MausNet?
Why is it so private? (so it seems)

Yves.

Could somenone put the NOVA VDI drivers on the Net ?

I can't access to Computerinsel's BBS because I haven't any modem :-(

Hello!

I am from France and I *never* saw or heard about STFM... Until I took a trip to G.B. While I just bought a STF in France (all that sellers knew about), There where only STFM in G.B. Shortly after came the STE... Moreover, old Atari with external drive&boot were called ST (without F or FM or anything) by the sellers I spoke to.

It seems to me STF and STFM are just two different names for the same thing in different countries.

Yves.

This is a perfect contradiction in itself IMHO, sorry.
(But this is hardly arguable due to different personal tastes.)
And if you don't need dithering in the Falcon "TC" mode (which is 15/16
bit, *not* 24/32!), then you have less display quality demands than I
have. (See http://www.esc.de/homes/guivol/fixpix/ what I mean.)

They're identical except that the STFM has an RF modulator to
allow an RF connection to a television while the STF does not.

3061. Help! Need to convert Atari formatted file to DOS

Newsgroup: comp.sys.atari.st

I'm not an Atari user, but I have a diskette formatted using an Atari 1040 ST that contains a very important MIDI file that I need to convert to or read on my Windows machine. I've tried using a utility called STDOS that's supposed to bridge the gap, but it was unable to read the diskette. Can anyone out there help me convert or read this file? I would appreciate any help you can provide, and I'd appreciate it if you could response to me by email at steve@accubid.com.

Thanks.

Steve Andrews.

Actually, in France there were no STFMs as such: the top labels always
said STF, however, on the later models, the labels underneath with the
serial number say "STFM France". I suppose the M was dropped since none
of the machines solde in France ever had an RF Modulator, since they
were all shipped with the superior RGB/SCART cables for TV display (All
TVs sold in France since 1981 have SCART connectors). Even my STE hasn't
got the Modulator hardware on the PCB. In France however, there have
always been 520 (512K) and 1040 (1Mb) models, and no "520+" or "260" or
whatever there was in Germany, the difference being the amount of
memory, and most of the earlier 520s had single sided floppies.

I beleive that the STFM marking that appears on the case actually refers
to the 2nd generation of STFs that were released (It's a Rev C
motherboard, Rev B being the 1st STFs and Rev A the original ST ???).

Cheers,
Nick

Usually a PC can read ST disks, the ST2DOS.EXE program should help, but you should really only use that on a copy of the original disk, since it messes around with the boot sector, and might make it unreadable even on an ST. Floppy disks also tend to suffer from bit-rot, that makes them sometimes unreadable after a few years.

Maybe you can try sending it to an Atari owner in your area to transfer it onto a blank PC formatted DD floppy. Unfortunately, you omitted to say where you are.

Cheers,
Nick

Hello,

Normally, Atari 720k floppies should be readable by the PCs. But:
- If it is a 720k disk, you may still have problems *if* folders were created on the Atari.
- The Atari OS is more comprehensive than PCs where floppy format is concerned. On Atari, you can format a "720k" floppy over 900k and we all do that to save space. PC can't (without a special driver)

Anyway, I would recommend that:
- format a 720k disk yourself on your PC.
- create the wanted folders yourself (on the PC).
- find someone with an Atari and ask this person to transfer files from one disk (the old one) the other (the new one), the Atari can cope with both.
- take the new floppy back : it's OK!

Remarks:
- Always use 8+3 filenames (DOS like) or you will end with stange filenames.
- If you know someone with a new Atari (with 1.44 drive) you can do exactly the same because the problems are the same exactly (Atari can format up to 1.8Mo)
- I didn't take into account strange formats which some programs may use and which are neither PC nor Atari.

Hope this helps,

Yves.

I have tested to download with Netscape 4.04 at my work
and it is not working on the PC
but it works on the SUN-Workstation.

If there is problems to download at my homepage
try to download from ftp.funet.fi

many text processors have the option either when importing or saving,
to append files to previous files. Edith? qed? Everest? STeno? it is not
automated, you have to open the files, but should be painless. :)

actually you can use any SIMMs faster than 120ns - 70ns should work
just fine.

Just about any computer shop should have 30-pin SIMMs - and since
these have fallen out of vogue for use with modern PCs, you should get
them fairly cheaply (I got some for a Mac Plus I got recently for $15
CDN for four). If you're in London, I'd suggest Computer Exchange in
Notting Hill Gate.

hi.
my problem with Dmirror is that I cannot configure it!
everytime I go to configure it from within Edge, it says that
Dmirror.prg has to be in the auto folder, and it can't find it there.
guess where it is?
yep, you're right, in the auto folder!
so dmirror is useless to me in the auto folder, I only use it from
Edge.

Kobold is also very good, you can create *.job files to do specific
backups, including only backing up changed files. very fast also.
this is Kobold 2.5 btw, Kobold 3.5(German) I can't say.

Texel from ASH is a good choice, and K-Spread is still supported?
You can get a german version from Seidel Softwareservice.

g> This is a perfect contradiction in itself IMHO, sorry.

Why? I use the Apex viewers all the time and they cause no problems. If a program causes no problems, that is clean enough for me.

Hey, I think an ACC that blocks the rest of a preemptive multitasking system while loading a pic is less than clean, but that's just me. :^)

g> And if you don't need dithering in the Falcon "TC" mode (which is
g> 15/16 bit, *not* 24/32!), then you have less display quality
g> demands than I have. (See http://www.esc.de/homes/guivol/fixpix/
g> what I mean.)

Well, supposedly, the Apex viewers use tricks to display in 24-bit on a standard Falcon.

Message-ID: <firebird-1105981309390001@pm3s18.shscomputer.com>
Source record: 101053

I would enjoy seeing the two most usable computer systems united. I remember when software was written on both and for both. That included everything from games to programming languages to the same suppliers of hardware/ upgrades. A combined effort of Atari and Amiga users would be a powerful combination. I'm sure that would get the worlds attention, especially if there is alot of support. Can it be done and who's interested?

Hi Dennis

I mentioned this to John a while back. You can help prevent the
access, until the bug is sorted, by closing the artricle window.

I have found that if you close the overview window, just once, before
the article window, Newsie accesses a drive. Most of the time it will
be drive A:, but sometimes it will be drive ':'!
Cheers! for now

>I suggest you download the file above and have a look.
>
>
>Hallvard

Hi Hallvard,
I've had a few attempts at downloading the sony-zip from
your site. I can get on to the server but the first screen gives 7 or 8
lines of info I don't understand, showing zero bytes. If I click on one of
these it brings up more files that I don't understand, and from there I
don't seem to be able to get back from this page. I've also tried with your
www site. I have a bit more luck with that in as much I am able to navigate
to the files that interest me, but they refuse any attempts to download
them. I don't have this problem with other www or ftp sites.

Have you any suggestions where I might be going wrong. I've not
heard of anyone else having these problems.

Thanks
Mike

Yup....

You need a copy of GHOSTLINK to run on your Atari,and a null modem cable.

You should be able to get ghostlink from any good BBS.

Hope this helps........????

Seeya,

Keith.

Every decent editor has a merge option, you can even use Calamus if
you want to but I don't think this is the right solution for Dennis.
Merging a few meg of 1K to 3K ask quite some work.
I think he is looking for a prg which merge in one single action a
complete folder into one big file.

>This makes all the difference as you can see!

These are my thoughts. Correct my if I'm wrong please.

As I see it *ftp> o 193.190.205.13* will direct you to the archive dir
of the RMA ftp-server.
ftp> cd archive/atari/ will look for a dir *archive* in the archive dir
(you are there already remember). So that's why you get
550 Directory /d:/archive/archive/atari not found
My conclusion: you don't need the /archive/atari path.
cd atari is sufficient.

OTOH if you use a slash (/) before the path it will look first on the
d:/ dir for an *archive* dir (which exist ofcourse). That's why this
path will work.
>
>I'm still a bit confused about the "correct" path though -as you can
>see, the above works and has always worked for me, but has the path been
>changed recently, or have people just pointed out the problem just now
>(having forgotten the preceeding slash)?

AFAIK nothing has changed recently. Last saturday I saw the webmaster
and we have discussed this matter. He has promished me to take a look
at the problem.
I was aware of this problem since long time, it just slipped out of my

mind.
BTW: I've a ftp list here from 31 march 1997. At that time the path
was already without the preceeding slash

> What is Pine for MiNT, and what is Pine in general?

Hi Yves!

Pine is a mail/news client that comes originally from UNIX.
There it is an alternative to ELM (it's an abbreviatiation, but PINE is
simply a word game...).

I use only Pine to read/send mail and news (at my university).
Even at home I can use it because it is text only and I log in via
terminal emulation. Fast and fine!

I don't know MiNT Pine yet, but will try it soon!

Greetings,
Carsten

You can read/write to the Maus if your ISP supports the *maus*
hierarchie.

I've ask my ISP if they could add the maus to their newsfeed and they
where so kind to do so.

Note: The main language is German but if you write in English you'll
get (sometimes) an anwer.

3101. ---> Support MEGA 3 <---

Newsgroup: comp.sys.atari.st
Date: 1998-05-11 00:00:00 UTC
From: Chris Swinson - MEGA Disczine <mega01@globalnet.co.uk>
Message-ID: <6j7o08u1@heliodor.xara.net>
Source record: 101075

For those of you who have not seen the best disczine around Click on the links at the end of this message and get disc 1 and 2 of issue 2 of MEGA DISCZINE.

If you have seen MEGA why have you not supported this new zine. There are lots of you out there who must of liked something in it. But you don't tell us what you liked and what you didn't. There are a lot of people who have not yet seen MEGA so get downloading there or over 200 articles on the 2 discs with a nice shall which anyone can use without any info at all on it.

There are many sections in this zine, Some or 1 off and are very interesting to read, It would be impossible to list them all so heres a quick rundown.

True horror/ghost tales, STOS, Tesla, Electronics, jokes and humour, Dreams what they mean and stuff, get rich, UFO articles, stories, Anti car crime, Reviews, Returned questionnaires, Science, Black holes, and much more. Simply take a look and you will be amazed on what we have found for you. There should be something for everyone in issue 2. Lets here what YOU would like to see appear !!

It only takes a moment to return the questionnaire, or to offer some ideas of your own. We need your support NOW. The more support we get the faster MEGA will be produced. Anything you do will be included in issue 3 which is currently been done by the MEGA team.

I want to make MEGA "YOUR" zine, so tell me what you want and we will include that page in the next issue. Any ideas not matter who obscure or small they be, are more than welcome.

The MEGA member list is getting slowly longer but we need more feedback, We need to know that people are reading it and liking it, There would be little point in producing a zine if there is now one reading it. This would be a great shame as there is now other zine like it.

Why not send in something in, Ramble on about anything you like, We want to hear from you. Get your name added to the credits list at the same time.

I have mailed MEGA 1 and 2 to god knows how many people over the last month, Well, Ok, It has not appeared on my site yet, But you can get it now if you wish. Simply join the mailing list and you will get MEGA before it goes onto my site. Out of all those people how now have got it, only a handful have had any comments. This is good but we need more now !

Everyone who has sent me mail over the last few weeks has not been added to the list. If you would like to be added to the mailing list then please re-mail me so I can add you to the list. Please check if you have requested to be added to make sure you have been added.

Issue 3 WILL appear but how soon all depends on you. So get writing and send something in, or at least tell us what you though about MEGA. It only takes a moment so why not go for it, your not going to loose anything by sending a mail to me.

If you have seen UFOST by Lee Round then please support his UFO zine with you UFO related material. Lee is now in 2 minds weather or not to do issue 3 because of all of you how seam to be scared or writing a letter to him. If you would like to send Lee mail, Send it to me but put "FOR LEE ROUND" in the subject box and I will be happy to pass it onto him. If your interested in UFO's or related stuff then request issue 2 of UFOST now, I regret it still has not been added to my site. Send me a mail if you would like a copy.

I have issue 2 ready for E-mail should you dare to ask for it. Sorry but it has not yet been added to my site, Keep trying though !!

Here are the URL's for MEGA Disczine issue 2.

scribbled the following on 11 May 98 @ 08:55:59:

km> many text processors have the option either when importing or
km> saving, to append files to previous files. Edith? qed? Everest?
km> STeno? it is not automated, you have to open the files, but
km> should be painless. :)

I've always wished that copy/move file routines had "Append" as one of the
options when there is a name conflict. Obviously, this wouldn't be useful
with binary files, but would come in handy with many text files.

3113. Swap Meet *** Not Vaporware ****

Newsgroup: comp.sys.atari.st
Date: 1998-05-11 00:00:00 UTC
From: "R. Wayne Arenz" <warenz@lintek.com>
Message-ID: <3557305f.0@news.netwalk.com>
Source record: 101087

******* Call for ALL Atarians -- Swap Meet in Columbus, Ohio, USA *******

***** NOTE: This is NOT vaporware -- the space IS reserved *****

This is a pre-call to all Atarians everywhere of every platform (game machines and home computers). We of the Atari Computer Enthusiasts of Columbus [a.k.a. ACEC] WILL be hosting a SWAP MEET/SHOW/SALE on Saturday, September 26, 1998 in Columbus, Ohio, USA. We've placed a security deposit and have marked off the calendar!

At this time, we are posting to provide early alert and gain a preliminary response from the Atari community. We wish to hear from all, but WE WOULD PARTICULARLY LIKE TO HEAR FROM (any remaining) ATARI VENDORS who may wish to attend so that we may include notice of their intention in later posts/publicity. We wish to hear from all so that we may better plan this activity and make certain that everyone interested receives a map to the location (in the north central portion of Columbus, just off of Interstate 71). We will shortly be able to e-mail that map in .BMP or other format.

We are not planning on making any money from this: Tables will be available to Vendors and flea marketeers for $5 per table pre-registration. This price INCLUDES door admission for one person. Obviously, we will not be planning a much greater admission price for people just wishing to walk in, look around, talk, and buy! ACEC merely wishes to continue to promote the Atari community as it has since the '70's.

The precise time and other details for the meet are yet to be set; Atari community response will be a prime factor in determining how long the doors will be open and what other shapes the meet takes.

PLEASE FORWARD this note to anyone you know -- any vendor, any collector, anyone cleaning out their closet -- who might be interested in things Atari.

PLEASE RESPOND to:
primary contact: rwarenz@infinet.com
Wayne's World BBS (614) 761-1891
secondary contact: chwbrown@ee.net (Charles Brown)

I've tried that with one message I've got that seems to be stuck on
the ISP's machine, and nothing has happened. It's still there, going
on 4 full days now.

I have a question ... Why does Newsie 0.88 access the A: Drive every time I delete a message when reading them offline? The 1st time I usedNewsie 88, it told me to put a disk in drive A: and I notice that every time I delete a message, the A: drive access light comes on and the drive spins. I've checked everything I know of and don't see anything that deals with A: drive. So, What's up? and WHY?

This bug does not show up on all kinds of data traffic. I do not know enough
about it in order to tell what's going on in detail. Exchanging a PAL by a
corrected version fixes this problem.

> PR> There is half a dozen different versions of the motherboard, and PAL

Then, I'm afraid, you missed a fair bit. There's quite a lot of such hardware
flaws, with variing degree of influence, ranging from badly terminated system
buses, unbuffered interfaces (printer port), to genuine bugs that are capable
of corrupting data, like the one with the serial port.

> always the same between modems.

Even with the AT commands there is a subset that is always the same on all
modems, comprising the D, H, Z commands for instance. As for the LEDs, most
of them have standard labels, a particular modem might lack some LEDs, and
the sequence on the front is generally varying. All the ones I've seen have
the CD and the OH LEDs though, as they are the most important, along with
the send and receive LEDs. Speaking of which, there is ambiguity for those,
sometimes they are labeled RD and SD, but a few modem manufacturers use D1
and D2 instead (what a silly choice ;-)).

Otto's ORCS is quite good, but my impression of WERCS was the one of
a pile of rubbish. I still use the old Atari RCS versions. V2.1 has a
few flaws but is very usable, and V3.0 looks alright too (haven't
worked with it enough to say if it's stable etc.

I did all the RSCs for the STinG Dialer and TelStar with GEM RCS V2.1

Read carefully. I did not say I do not know STFM, but that I do not know
520STFM, which never made it to Germany. Of course I know 1040STFM, I have
five of them !

> Never seen that, but then again, I've never seen any of the oldest TOSless

I did. My first machine was one. It's far more exciting (in nostalgic terms)
than a 520STFM ever could be. BTW I still must have those old ROMs with
BOOT in them.

I believe that the PowerPC version of MS Windows NT was abandonded
some time ago. I avoid Microsoft products completely, so I may not be
up to date on this.

IBM uses PowerPC CPUs in their RS/6000 and AS/400 lines. Sun has
written Solaris (their UNIX System V R4 plus Open Windows (X11R6)) for
PowerPC, and IBM sells it on the RS/6000 as a standard catalog item.

Welcome to the club. I have a the same machine, and I've been told
that there's a defect in the PAL/GAL chip. All large DL's are
corrupted with CRC errors, although I can download ~90K (sometimes).

There's a fix, to be found in the docs of FSER096 (or something like
that) available at nic.funet.fi. The docs are all in German, which I
can't read. Please let me know if you succeed with this mod. I would
like to try it, but I need some english docs.

BTW I have no trouble with ZMODEM transfers, and luckily my ISP allows
me to connect to the net via PPP or through their BBS, so I'm able to
access FTP.

The loading sequence of the auto folder prg's are very important. I
can't give you a rule so the only to find this out is to rearrange the
loading sequences until you don't get bombs anymore.

I said this already in another posting. The loading sequence of the
auto folder prg's is very important, especialy on a Hades (I can tell
you that for sure). If I need it I load it as late as possible. The
only prog's I load after Bigdos are the HSMODA7 drivers and MiNT.

BTW: With the latest HDdriver (v 7.5) you don't need Bigdos anymore
for TOS/DOS compatibility. There is an option which let you
partitionate HD TOS/DOS readable without MagiC or Bigdos. The only
drawback is that one can only use one partition (1 GB limit). At least
that is what the docs says about it. I haven't tested it yet.

Prior to using the ftp site I tried your Web site, and got the same
results as before ie. When trying to download the sony_144.zip I got
resolving host for 5 minutes after which I gave up on it. I then tried
to download rsve.txt and that came up with 'error finding file'.

Thanks for your help, I'll have another look at your ftp site again
there seems some interesting programs.

Hello everybody !
Are you interested by a GEM image manager for your Atari ?
Do you want to compute & animate VERY FAST Fractals on your Falcon ?
Then go to : http://www.mygale.org/01/jlusetti

And if you're interested by Marvel Comics, go there ! Event if it is in French there are a lot of beautiful pictures to look !

Bye, Jean

Re: "Picture Viever", k_hampf@yahoo.com scribbled the following on 12 May 98 @ 09:49:24:

kh> I would like to know if there's any picture viewer (GIF/JPEG)
kh> for Falcon 030 using DSP and that has slideshow capablities.

Imagecopy and Speed of Light come to mind (SoL is slow and not very stable, though).

kh> The 1st Guide is not using DSP and it's lacking slideshow
kh> capabilites, and so are the Apex viewers I've tried.

1st Guide will use JPEGD.PRG if it's installed, provided you have it configured to do so. Press Control-A to get to the menu. I think you're right that it doesn't have slideshow capability, though.

I guess Imagecopy is probably your best solution. It's a commercial program.

Re: "MagiC bootup", k_hampf@yahoo.com scribbled the following on 12 May 98 @ 09:05:40:

kh> The Apex viewers are SLOW! It might be that I don't have a DSP
kh> version. Same goes for the 1st Guide ... they're slow and lack
kh> slideshow capabilities.

There is no separate DSP version of the Apex viewers. And I don't believe they're slow at all, especially considering the picture you get when loading from a low resolution, and the fact that the JPEG viewer scales pics too large for your screen with no apparent loss in quality.

kh> My JPEG v2.22 is great in every aspect BUT that it chrashes when
kh> I read some picture files (usuallly about 10Kb JPEG's) and that
kh> it screws up MagiC pretty bad when it bombs.

It also doesn't work with NVDI installed. And I find the slideshow feature fairly worthless, since it almost always crashes before I get through all the pics. If I need a slideshow, I simply switch to 768x480xHC and use Imagecopy.

* LED v1.51 * A JPEG is worth a thousand words.

To anyone who keeps getting a disk error when running the Beta test version of Mummies Playtime. It is important that you make a folder called PLAYTIME on the root directory of your disk, then copy the Playtime.prg file and the two folders...Bangman, and Go Troll inside it. Otherwise it won't work.

Yours Faithfully (In a very Silly way)

It could be a sofware problem, but seing that you are using a MegaSTE, I
would more likely think of a hardware problem. I suffered from corruptions
on download since many months on my MegaSTE. Thanks to a German user, I
was given a hint about a GAL being buggy in many MegaSTE. A guy in Germany
accepted to program a new GAL for me, and it solved the problem at once.
Email me if you want further details.

>interested?

The Amiga users are probably not very interested, since their market is "much"
bugger than the Atari one, and there still is some perpetual hatred looming
since the 80s.
I'd like to see it, though.
As for games and programs being ported, that was not always a good thing. The
games ported from the ST never took any advantage of the Amiga architecture,
and the Amiga games ported to the ST had to be downgraded.

Seems there is a grave need for optimising there.
On my Amiga 1200 (28 MHz) with MPEGA (very optimised), I can play 128 kbps MP3s while multitasking, with mono, half sample rate, somewhat deteriorated quality and a few seconds of buffer.

>: I don't think an ST has a chance at realtime... :P

Amp is a well-known one, available for (at least) UNIX, Windows and Mac.

My old 520STFM (which was bought in Singapore) was actually a 1040 with 512K only. I could just plug in the other 512K and solder some resistors & I have a regular 1040STFM ! Another guy's 520STFM in Singapore was not as such, it was really a 520STFM, no extra slot for memory.

All right, I've gotten no replies so far, is my news server being strange again? :)

I've lowered some prices, added some stuff. Shipping is extra, blah blah blah...

A 520STfm, single sided drive, TOS 1.0, RF output, 512k but contains unpopulated 2mb upgrade card. Solder some chips and you've got 2.5mb. $30

A 1040STf, double sided drive, TOS 1.0, no RF, 1mb (basically stock) $40

SC1224 color monitor, goldstar version. $40

A dead 520ST, the original one with the external power supply. Has 1mb upgrade. Good for parts? I've swiped the TOS roms already... I just checked the power supply with a meter and it looks good. Make offers.

An ST Replay 4 cartrige, does 8-bit mono sound sampling and output. $15

Two XEBEC SCSI-MFM controllers. Lets you use old MFM drives on a SCSI bus. Doesn't seem to be compatable with newer formatting utils, (at least not ICD's) but work fine if you can get the drives formatted with some other controller, or can find a copy of some really old formatting utils... (I've been unsuccessfull :P) Make offers.

A beat up SF354 external floppy, I had a PC drive in it for a while so it has a square hole cut in the front. I'll throw a single sided drive in there just to get it out of my hair... :) Make offers.

Various Atari magazines, about 20, mostly Antic and STart. Seem to date mostly '86-'87. Offers?

Sorry about the anti spam, its been almost a year since I last posted to a newsgroup, and spam has just recently (mostly) disappeared from my mailbox... I'd hate to invite in another flood of spam...

To know not to format the IDE drive would have been great a couple of years ago. I interrupted a format on my IDE and it went nuts. Is there any way to get it running again or has the head got stuck or what? I would really like solutions like "partition it and off you go" ;)

This is the kind of info that really should be put in the ST Quick FAQ don't you think?

3167. BigDOS and MagiC frustration

Newsgroup: comp.sys.atari.st
Date: 1998-05-12 00:00:00 UTC
From: "K.Hampf" <k_hampf@yahoo.com>
Message-ID: <3557e5bc.0@d2o29.telia.com>
Source record: 101111

I have now pinpointed some problems:

a) I can't read big DOS partitions in GEM/TOS.

It has nothing to do with the HD drivers I've used, it must be BigDOS that can't read all dir's on my Zip-Drive. Some subdirs are ALWAYS displayed as garbage in GEM/TOS. I'm by this forced to use MagiC instead.

b) MagiC boots up in about 2-3 minutes, if at all.

I have no IDE drive and it looks for it anyway. Should be solved easily by using MPATCH21 which isn't compatible with MagiC 5.20 ;) The Fastboot (used from the bootsector of a floppy) overwrites MagiC in memory, and is therefore not usable.
Sometimes my Falcon gets stuck in the bootrout, but now I can tell by watching the floppy light. MagiC hangs when it is checking if the floppy is bootable or something. If this has occured it will again until I boot it up in GEM/TOS once.
At times I can also get MagiC going and it doesn't draw the screen. One reboot is usually enough to get this fixed.

c) MagiC hates me

Yes it does. I can't test programs in GEM/TOS due to BigDOS problems and MagiC crashes if not the first time you run a program, almost certainly the second time. I just tried to test Freedom2 and view some pictures last evening, and it took me 15 minutes to get it up right just to start using it, then I did about 30 unwanted reboots that one evening. I would like to use CAB and stuff, but with the computer going like this I can't. But then again CAB is the slowest browser I've ever seen, and it doesn't handle JavaScripts either. You can't charge money for a product like that.

>GIF viewer has smooth scrolling).

The Apex viewers are SLOW! It might be that I don't have a DSP version. Same goes for the 1st Guide ... they're slow and lack slideshow capabilities. My JPEG v2.22 is great in every aspect BUT that it chrashes when I read some picture files (usuallly about 10Kb JPEG's) and that it screws up MagiC pretty bad when it bombs.

>You need MPATCH20 by Daniel Hedberg of New Beat Development.
>I'd guess you can get it at his Web page:http://www.kuai.se/~dhedberg/

The program is not to be found at that adress AND it's not compatible with
MagiC 5.20 just 5.1x and below :(

>Hmmm... doesn't Shutdown handle this SWIDTH program then? Try putting the
>following in SHUTDOWN.INF so that the first SWIDTH is closed down before it
>gets started up again after the resolution change:
>terminate SWIDTH

The SWIDTH effect is taken away when any picture viewer has changed and
changed back resolutions. Understandable but annoying.

>kh> And, finally, how can I get Mouse 2.5 to autoboot under MagiC 5.20?
>Do you use the #_AUT line in MAGX.INF? If not, you may be able to install
>MOUSE26 there to autoboot:
>#_AUT C:\MOUSE26.PRG

That sure didn't help. But I then found out it was real easy! The modem
setup has been active in my CPX-panel and it's been resetting my serial
port. I must try to use Internet and comms again and check if I've gotten
rid of some serial speed problems there also...

Thanks for the help though!

Source record: 101114

I would like to know if there's any picture viewer (GIF/JPEG) for Falcon 030 using DSP and that has slideshow capablities.

I have been using JPEGView v2.22 and it's great ... but it won't work good enough with MagiC and I can't read big DOS partitions from GEM/TOS due to BigDOS problems. The 1st Guide is not using DSP and it's lacking slideshow capabilites, and so are the Apex viewers I've tried. The JPEG thingie you start up in the AUTO folder and that has this demo-ACC is probably using the DSP but it's also slow.
I think I've been a little spoiled by using GraphicConverter on Macintosh, but I do no longer have a color Mac, I'm now forced to use my Falcon on a TV-set. That also makes me not using Interlaced resolutions, and gives all programs not switching resolutions this strange tall look.

Message-ID: <3557fa2a.0@d2o29.telia.com>
Source record: 101116

What is the best MiNT version/package/distribution to use with a standard 4Mb Falcon 030 without FPU? Right now I've got 50Mb HD space, but could probably manage to get about 200Mb more, is that sufficient for working with GNU C++ ?

I've got some knowledge in Unix and I would like to run n.AES also, but what MiNT am I supposed to use? Because you do have to use MiNT with n.AES, right? Where should I get MiNT, is FUNet in Finland a good source? And what about using X-windows as a GUI?

What connection packages are available? Browsers? Can I have MagiC there also?

I know nothing about MiNT ... but I would like that Unix compability.

If when you formatted the IDE drive, and erased some of the factory
data, you may be able to contact the manufacture and see if they have
a utility package to restore the drive. Things being the way they are,
it goes without saying that you'll probably have to connect it to a PC
to do this. A good "personal" PC shoppe should be able to handle this
for you if you don't have any luck with TOS software.

Mike

If you want to do something with images that don't include drawing, chances are always good that MGIF will handle it. ;-)

MGIF can do slideshows directly from the command line or via a 'script' file. Normal wildcards are supported and slideshows can be repeating, random and timed. It's even possible to do some image processing operations on the images before they are displayed, but I can't recall exactly what the limitations are on that (at least scaling should be possible).

Naturally, all graphics modes are supported (only 256 colours on graphics cards). JPEGD (Brainstorm's DSP jpeg decoder) will be used if available and you won't find a faster GIF decoder/viewer anywhere.

The latest actual release version is v5.01, which should be available on most ftp sites, but you should really always use the latest 'beta' version available from my ftp/WWW site (the beta archives are not complete, though, so you need a regular distribution as well).
The fifth v5.10 beta was released in July last year and is a _lot_ better than v5.01. Speedups, new functions, windowed dialogs etc.

If you have any questions etc, please email me.

Hello,

I am looking for a good command line interpretor in the form of a desk accessory. It would have to run external programs such as gcc, make, etc. and be able to set envioroment variables.

I know I could use Mint with toswin and a shell like bash but that is a bit too complex for my needs.

If anybody could send any information via email on such an accessory I would be very grateful.

Thanks alot, Robin Grant.

Thanks for your suggestion ... I've tried MGIF once but it might have been
an old version, I remember I couldn't get it to show anything fast or
colourful. I really hope that 256 colour limit is not on Falcons too. Anyhow
I'll give it a try!

I hope this is the JPEGD you were talking about:
ftp://ftp.lip6.fr/pub8/atari/Falcon/Graphics/jpegd.zip

Message-ID: <1998051211150700.HAA24410@ladder01.news.aol.com>
Source record: 101124

Sorry I know none of this is for ST, but maybe someone has the Atari 8-bit game I need :)

Ultima 1 complete for IBM in great shape. Includes the cloth bag with five coins and the four maps.

Also have the rare Limited Edition Second trilogy (Ultimas 4-6) for IBM on 3.5 disks. Has a special sticker on the box and comes with all 3 cloth maps unlike the regular edition which has one paper map for all 3 games. It is missing the book and ref guide, and the U4 disk is a copy but the the rare items are the special box and the cloth maps.

I'm looking for:

Ultima 2 for Mac
Ultima 2 in the big box for ANY computer
Ultima 1 for Atari 8-bit (has a castle on the box)
Ultima by Cal. Pacific for Apple][
Ultima 2 for C64 in the small box with the Black border on the box
Akalabeth for Apple][
Ultima Escape from Mt. Drash for VIC20

If you are interested, please send me an email, trades prefered :)

Thanks,
Tom

Try GrafTool:

http://ourworld.compuserve.com/homepages/JJvB

It has fast JPEG decoding and a slideshow feature. However, it doesn't support the DSP or progressive JPEGs found on the 'net (these have to be converted beforehand using jpegtran.ttp from The Independent JPEG Group's software). GrafTool also makes an excellent external viewer for use in CAB, as it understands the AV Protocol and is robust while multitasking, among other things.

> At times I can also get MagiC going and it doesn't draw the screen. One
> reboot is usually enough to get this fixed.

I do have some problems like yours. Sometimes bombs at bootup (2, 3 or 4).
Sometimes a white screen and the boot stops. Sometimes the screen become
dark (its "power save" feature is then activated) then the boot proceeds
but there is no respons of the keyboard.

I need to press the reset button to get rid of these. Then all is ok.

Bye,
/Pascal/

: What is Pine for MiNT, and what is Pine in general?

Pine is an email program for reading and writing email. It's easy to use
but still has all the features you usually want.

Another good email reader is Mutt.

3186. STraight Fax 2 and Class 1

Newsgroup: comp.sys.atari.st
Date: 1998-05-12 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <BJRXC2I@tos.pl.net>
Source record: 101130

I'm trying to get STraight Fax 2 version 2.5 to work with a class 1 fax modem.

It works fine with a USR Sportster Voice 33.6 fax modem in class 2, but fails if I switch it to class one. It also fails on a cheap Dynalink modem (Cirrus Logic chipset) in a similar way, as this modem supports only class 1.

The modem will dial, and I can hear the fax beep periodically as usual. Then the remote fax machine answers the phone, and after a while STraight Fax just says that it timed out waiting for remote fax. No pages get transferred.

This problem occurs on both the USR and the Dynalink modem in class 1, even though class 2 work ok. What could be wrong here?

3187. BigDOS bombs

Newsgroup: comp.sys.atari.st
Date: 1998-05-12 00:00:00 UTC
From: "K.Hampf" <k_hampf@yahoo.com>
Message-ID: <35584509.0@d2o29.telia.com>
Source record: 101131

Does everyone get a half a dozen of bombs _everytime_ they use BigDOS? That could be one thing explaining my problems with GEM/TOS and BigDOS. I get about 4 to 8 (I'll count them sometime) bombs but the boot goes on. This is not depending on the harddisk driver and hardly something to do with the other AUTO programs, this I'll know for sure tomorrow.

That's the sort of thing that makes one not use it, isn't it? I'll try it
and see how complicated it is, and how fast it seems to be, conversions and
all. But I hope it's under developement and'll get nifty routs for using the
DSP to display every known graphic format on earth :)

>>other AUTO programs, this I'll know for sure tomorrow.

I noticed some BigDOS crashes very frequently on Hades (each time the
mouse was moved): it was due to conflicts with keyboards handling
programms... Since I removed this programm, I don't have any problem more.
If it may help...

Message-ID: <35584FCF.167E@imag.fr>
Source record: 101136

K.Hampf wrote:
>
> What is the best MiNT version/package/distribution to use with a standard

I don't know about the packages because I found out it was more simple
to install things myself than with packages and install programs that
wouldn't work...
Anyway, I use (and i'm satisfied with :)
- MiNT 1.12 (soon FreeMiNT 1.14.7)
=> The kernel
- MiNTOS 1.4.1 with init1.3
=> The multi-user UNiX extension
- MiNTNet ... I don't know for sure, I don't even have a phone, so...
=> The network part, with PPP, SLIP...
- AES 4.1, slow but OK.
=> The GUI.

> 4Mb Falcon 030 without FPU? Right now I've got 50Mb HD space, but could
> probably manage to get about 200Mb more, is that sufficient for working with
> GNU C++ ?
>

All that on a 4Mo STE with a 150Mo Minix (UNiX-like) partition, without
a FPU.
So I'm sure it will be even better on a Falcon, and sincerely 50Mb
aren't a lot. Maybe enough if you only use G++.

> I've got some knowledge in Unix and I would like to run n.AES also, but what
> MiNT am I supposed to use? Because you do have to use MiNT with n.AES,
> right? Where should I get MiNT, is FUNet in Finland a good source? And what
> about using X-windows as a GUI?

FUNet is the *best* source IMHO for MiNT. I don't know about N.AES, but
with AES4.1, MiNT 1.0 is enough, MiNT 1.12 is better, (Free)MiNT
1.14.7... I don't know yet, but surely better if you intend to use
multi-users or virtual RAM.

X-Windows? Is it the same than the fvwm I see on my screen at home? If
so, it is *very* slow (on a 1040 STE, mind...). Still good, but poor.

>
> What connection packages are available? Browsers? Can I have MagiC there
> also?

Magic is commercial and magically wonderful (from what I hear). It is
available.
With or without Magic, there are many browsers, but I won't be able to

help you in that area.

>
> I know nothing about MiNT ... but I would like that Unix compability.

With MiNTOS, it *is* UNiX, or so says Ms Ellis (K.L.), well known for
using MiNT :-)

>
> Regards, K. Hampf

From: niall.moran@strath.ac.uk
Message-ID: <6j9m5v$i77$2@rockall.cc.strath.ac.uk>
Source record: 101138

I'm having problems with the blitter in my mega STe. When the blitter
is turned on the screen messes up but works fine with it switched off.
Does this mean that the blitter is buggered or is something else up.
Which chip is the blitter and is it possible to use one from a normal
STE if its buggered.

Many thanks

Niall

I think more recent IDE drives are designed to ignore attempts to format
them. Note also that PCs tend to call partitioning "formatting" and
formatting "low-level formatting", just to confuse us.

Hi,

There are hundreds of programs for making music and listening
to music which you can download at
http://www.hitsquad.com/smm/atari/

There is mainly ST software but there's also some for the
Falcon.

The site has software for midi, MOD, audio, recording,
multi-track, MPEG, soft synths, drum machines, guitar tuners,
samplers, patch editors/librarians, mp3 players, sequencers,
algorhythmic composition, and heaps more.

cheers,
jason.

Do you mean a) read Atari files or b) run Atari programs ?

a) a DOS 720K formatted floppy will allow you to transfer files. After
that, it all depends on the type of file you want to read.

b) You need an ST emulator program. The only ones I know of on the Mac
are NoSTalgia and MagiCMac. NoSTalgia is only for PPC and is an ST
emulator. The second one is actually a port of Magic, a commercial
multitasking TOS/GEM replacement that only runs GEM programs, but takes
full advantage of the Mac hardware.

Nostalgia: http://users.skynet.be/sky39147/

Cheers,
Nick

Hi,

yup, they *may be* able to help you....

I've been having this message in my mind for long time, but it's about time it was posted, too...

MABN is one of the very rare people that still support Atari over here... be glad they're here, you'd say.

Well, I ordered my new TT memory board from them, that was end of January. Paid for it at the same time. Delivery would be "in a week or so".

Around the end of March, I called AixIt in Germany (the board's manufacturers) to ask a little around... Yes, they'd an order from MABN, but the old boards were gone, so it would be the latest board and the first batch of 100 was due somewhere in April, so it would take some little more time.
No sweat, if only MABN would spend a dime on a telephone call...

So I called MABN around May 1st, "Hey guys, I ordered and paid for a board in January, now it's May and I've seen nothing!?!" "Yessir, sorry, sorry, sorry, but the boards were out and now you'll be getting the latest model for the same price and sorry we forgot to call you".

Ok, so now it's May 13, and I guess I have to wait a little longer till.....
I finally hear/see something from these guys.

Be advised...

Hi Steve,

just gave it a try: No Problems. Here's MagiC 5.01 running fine. The page told me:

"Wednesday May 13, 1998 - 3:45:33 AM, CDT holleman.demon.nl., you are using Mozilla/2.0 (compatible; Cab/02.50; Ovl/1.2904; STiK/01.15; Atari) as your browser and you came to this page from ."

Could it be MagiC 4 then???

You dont have to add them manually in cab just click on the default
button in the proxy box in cab and it will be added and then save
setup also dont forget to add the email atc in the default cfg

here is mine below

I've had exactly the same problem after updating. You get the german
keyboard layout. I've fixed it using the keyboard manager 'CKBD DeLuxe'
from Pascal Fellerich (available at most Atari related FTP-sites)

> another problem is that several times on the desktop and in ASH-emailer
> the 1998 date is converted in 1996?

Don't know whats wrong here...

> 2. with some programs i got first 2 bombs and then
> a crash with message (not in a box, but in the upper half of the screen,
> black on white):

I also had this problem after the 5.2 update. Far too many programs
disturbed the 'Speicherblock' and became more or less useless on my
Falcon. At first I thought it was Nemesis, because that suddenly
refused to run in 'high' mode without bombing.
Some weeks ago I got HDDriver 7.5 to replace AHDI 6.xx as my harddisk
driver, and all the problems suddenly disappeard. So propably AHDI is
to slow for MagiC, or doen't understand some commands or something.

Was it to look at something for your SM ? :-)

Well, same problem here. It happens on a file 27581 bytes long. I already
noticed sometimes same weird problems when loading or decoding jpeg
pictures. The only way is to reboot the machine :-(as Magic does not
allow me to do 'alt-ctrl-esc'.

Magic 5.13, Cab 2.6, ovl 1.2904, STinG 1.15.

Bye,
/Pascal/

>Thanks for your suggestion ... I've tried MGIF once but it might have been
>an old version, I remember I couldn't get it to show anything fast or

MGIF has been around since '91 and was monochrome only until a couple of
years ago (it was also only a GIF viewer at the beginning, hence the name).

>colourful. I really hope that 256 colour limit is not on Falcons too. Anyhow
>I'll give it a try!

The 256 colour limit is only there because I didn't know how to deal with
more colours via the VDI when I added support for that. The next release
version will very likely handle 15/16/24/32 bit modes as well.

MGIF won't use the VDI unless you force it to, but it will happily draw in
Falcon TC mode (with or without Floyd-Steinberg dithering).

>I hope this is the JPEGD you were talking about:
>ftp://ftp.lip6.fr/pub8/atari/Falcon/Graphics/jpegd.zip

There are certainly different versions of it, but I'd hope all of them
can be accessed in the same way.

>I found the beta at ftp://ftp.lip6.fr/pub8/atari/Graphics/mgif510b.lzh

Actually, I state clearly in the documentation that the beta versions must
not be distributed anywhere but on my own site.
As I said, there have been _five_ v5.10 betas so far...

Please, go to my WWW pages (see .sig) and fetch the latest one, or at least
check that the latest features mentioned are indeed in the one you got.

By the way, as has been mentioned here a number of times, most Atari JPEG
viewers can't deal with progressive JPEGs. At present that is, unfortunately,
true for MGIF as well, but the next beta will be able to handle them (I just
need to rewrite some interface code). In the mean time, I believe there are
programs that convert between progressive and normal format.

Terry May wrote:

> Any idea why these all show up in monochrome with Ease's Iconcons?

Select 16-color mode in IconsCons -- that's where most of them are in
Malcolm's collection. You'll have to copy and paste them to the 256-color
slots as I had to do. It seems that any icon not defined in the many
color modes of IconsCons will default to the monochrome version.

I'm not a MagiC user (yet) but was curious...

The banner that says "The CITROï¿½N Connection" is a progressive JPEG. Is that a clue? The only other JPEG there, which isn't progressive, is rather strange because its size is 1x1 pixel. Nothing like having 24-bit color in one pixel ;-). This 1x1 JPEG is used for the page's long vertical rule, lengthened using HTML (height="1800"). Is that a clue? There are two GIFs as well, one animated. Try the page offline, disabling one graphic at a time to find out which one MagiC is choking on.

Good! Many users are happy away from the complexity of PCs (even if the
PCs do have good points too).
I have a 10 year old STE so I don't know much about new Atari. But there
are few things I know from whar I read in this group:
- The Hades is the best (it is also the most powerful)
- The Medusa aren't spoken of any more.
- The TT is powerful and "clean" (I don't know the equivalent of
"stable" in french)
- The Falcon is the most wide-spread (good machine, perfect for music, a
little slow in other areas when DSP is not used)
- The Mega STE is now a little old but can perfectly be used for task
involving reasonable data (no real-time multimedia with 24bit-pictures
and 96kHz sound)
- DON'T TAKE a 520 or 1040 STE. Their limitation at 4Mo RAM is
frustrating with today's programs, and their limit in size and colors
for screen (320x200-16c, 640x200-4c, 640x400-monochrome) is almost
unbearable.

If you're not looking for speed and want a do-all-you-want machine,
Falcon seems the best choice. And you can easily travel with it :-)

With an Atari, you can do all you want except Java (some rumours though)
If you have a modern machine, you will be able to use Linux.
If you have a 68030 (and nothing else) like the TT, you can have virtual
memory with MiNT (UNiX clone for Atari OS).

Hope this helps,

Yves.

: Howdy Kemosabies,
:
: and getting the dynamic IP and all looked good. I can ping all IP addresses
: and resolve host names. However, Tracer Route will ONLY hop to the DNS.
: NEWSie/POPWatch all work fine, but CAB/CAB.OVL can't resolve anything.
:
: I can connect with WENSuite's PPPLink, but can't surf as I get a "can't
: resolve DNS" with WENSuite also. My understanding is the ISP can use a proxy
: server, but I'm not sure that's the problem either.
:
: This ISP uses "filtering" software on their server to block offensive
: material from the Web. I'm not sure how they do this or whether this
: blocking software is keeping STinG from resolving TCP stuff. This ISP has
: franchises in 28 states so, I'm hoping someone else has had some experience
: with ISP's that use blocking software and if they have STinG working with it.

Both ping and traceroute use (if my memory doesn't fool me) ICMP. ICMP
has NOTHING to do with TCP. Proxy-servers most often work at the TCP
level, and especially at the HTTP level (which "sits on top" of the TCP
level). So that shouldn't interfere with ICMP either. POP goes through TCP
too. I am not a CAB user, so could you specify "CAB can't resolve anything" ?

Also, your ISP filtering offensive stuff should not interfere with ICMP
traffic, since filtering occurs at the HTTP, FTP, e-mail (SMTP) etc. levels,
all of which sit on top of TCP.

Give me a bit more info please, and I'll be glad to help.

I love nostalgia...

I used to be part of the hacking community back in the 80's.. i used an atari st to all sorts of things from Wardialing, Scanning Codes, BlueBoxing, etc... I realize that there is WAY to much to risk to do anything like that these days and that most of the stuff (like blueboxing) wont even work under modern phone systems...

but i would REALLY love to have some of those programs for nostalgia purposes.. if anyone has anything related to what i am talking about, please drop me an email.

thanks
mark

Yea, it's not a good idea. The utility package I was refering to is
not like FDISK or FORMAT.COM. It is a specific package from the
manufacture that restores critical data. Maxtor is the only vendor
that I have contacted with regards to this however.

Maybe Uwe (in his spare time:) could add a utility to read this data,
store it, and restore it on drives that work this way. I guess the
best thing is just not to format unless your sure it won't damage the
drive.

Mike

Hi
You can try CENTview (v2.6.4) which can read a lot of picture's format
including JPG and GIF :-)
You can download it at :

http://www.graphity.fr/centek/

I think the page is only in French. Click on "Logiciels" and you should find it.
Hope it helps.

hi all this is the first time i have tried this

to link two 2.5"ide's master and slave,
is it because of what they are{no one is likley to get two
into a laptop at the same time}that they are all set to single
operation?

i have two to experment with ,both ibm dboa-2720

there are only two jumpers on them and one of them is very close to
the ribbon plug

HI there

The speed of the SIMM's is not crucial and can be of mixed speeds.
Obviously, in any case the fastest access would be at the slowest
rate.

On the ST it doesn't matter, I have tried alsorts of combinations and
speeds. My own personel choice would be 2 matching sets, my that's my
choice.

Cheers! for now
Steve

Re: "New set of icons to download", roughley@HORMEL.unix.dsoe.com scribbled
the following on 13 May 98 @ 11:03:50:

r> Select 16-color mode in IconsCons -- that's where most of them
r> are in Malcolm's collection.

Just tried it again, and 16-color mode was already selected. And if I go to
the editor with any of them and select 16 colors (if it's not already
selected) it's 'still in monochrome. Mind you, I'm getting the 16-color
version of the icons, but there's no color.

If I have Magxdesk load it, they all show up fine, even the ones that are too
large (i.e. > 32x32) for Iconcons. I could cut and paste from there with
Imagecopy, but would prefer not to go through that hassle.

>MABN is one of the very rare people that still support Atari over here... be
>glad they're here, you'd say.

They're really nice people but they are Dutch. In Belgium one say
never trust a Dutch when it becomes to business.
BTW: IMHO ACN is even worser they can't be trust at all.

>
>Well, I ordered my new TT memory board from them, that was end of January. Paid
>for it at the same time. Delivery would be "in a week or so".

>somewhere in April, so it would take some little more time.
>No sweat, if only MABN would spend a dime on a telephone call...

This is a major problem. It's not only MABN but almost all compagnies
do so nowadays. They are all very rapid to cash the money but to
deliver... that's another story.
Almost a year ago I sended in a order together with the money for an
update of Calamus SL95 (Britisch Firm). I still haven't see anything.
They never have send me an e-mail explaining why they couldn't fulfil
my order (unless they were forced too). The latest I've heard
something from then was that they were about to ship. A month later
still nothing. He even didn't bother to send me a reply.
It's the first and the last time I've done some business with that
Firm.

>Ok, so now it's May 13, and I guess I have to wait a little longer till.......
>I finally hear/see something from these guys.

I'm sure they will eventually. A while ago I asked them if they had a
TTM195 for sale. They hadn't any at that moment but the salesman promished me
he would let me know if they had one.

He kept his promishes. After 4 months he phoned to me (long
distance call) to say they had one.

The moral of the story: If you want to do business with MABN please
do, they are really nice guys (to nice perhaps) but don't pay anything
in advance.

3236. Error 098: What is the meaning?

Newsgroup: comp.sys.atari.st
Date: 1998-05-13 00:00:00 UTC
From: tos4ever@ping.be
Message-ID: <3559f3d83113553@ping.be>
Source record: 100924

Hello,

When I try to open something in UNIC.PRG I always get an *error 098*
message.
What is the meaning of the error message. I can't find any docs about
this error.

I'm doing this on a Hades 060/ET6000 graphic card running N.AES v1.7.1,
MiNT 1.14.6 (Hades patch), Thing 1.26.
I've used KGMD to install the MiNT/MiNtnet environment.

Strange enough on my TT using almost the same setup I can use
unic.prg without any problems.

TIA

Howdy,

The excellent desktop Thing is up to v1.26 now. It's available at
ftp.cs.tu-berlin.de pub/atari/incoming
193.190.205.13 atari/incoming/desktop
If you've troubles to reach the last one you can try the following
path /archive/atari/desktop.

Whilst you're there you may grab also the latest Iconmanager of Thing.
It works with color icons now. Just marvellous.
Look for THIN126D.LZH and TICN110D.LZH.

Nope, don't add proxy to the start of the hostname unless it's
actually called that.

> HTTP_PROXY_PORT = 80 (The ISP says port is 80)

If that's what they say ot is then that's OK.

>In CAB v2.5 option, server/proxy do you just add this:
>
> HTTP proxy: www.helpme.com

I never bothered to do this in CAB and it uses the proxy server anyway
(this is with STinG and the latest OVL). I can tell because the
download speeds are much faster with the the proxy set (when the proxy
is working of course...).

BTW, for any Demonites, if you set the FTP proxy stuff to use Demon's
proxy server you can get very fast FTP downloads without having to use
an external client (likewise this works without setting it up within
CAB if you have it in your default.cfg).

I don't think anyone wants to abandon their OS, but emulation on both sides
(same processor!) and shared applications and perhaps a shared API would make
it a lot simpler. Many great application were/are available on both platforms,
such as PageStream, Lattice C, trackers and DeLuxePaint.

There is an Amiga emulator available with source for UNIX; UAE. Wouldn't it be
possible to port it to the ST and replace the CPU emulation with the real
thing?
Same goes for a port of STonX to AmigaOS.

For what it's worth, this 27,581-byte graphic is a progressive JPEG.
The embedded comments show it was created with Adobe Photoshop 4.0.
Even though GrafTool doesn't support progressive JPEGs, it chokes on
this graphic even before finding that out, stating "unknown JFIF
revision number 1.2 Skipping ED". But like Steve, there's no problems
with Geneva, STinG, CAB 2.5, cab.ovl 1.2904. Maybe cab_jpeg.ovl and
MagiC don't like these types of JPEGs? Someone running under PPP-
Connect instead of STinG could check this out and narrow the cause down.

Hi all

I did the icons with interface they also load into neodesk4 fine and
can be inserted into the rsc of thing and junniee with interface.

I tried them in 256 colours on the falcon and the tt and they work.
The Icons will only be in 16 colours anyway. I did not bother with the
mono res icons as I never use this anymore. Some of the Icons will
have these 256 colour icons as a few I have converted from my mac with
iconvert which strips the icons from the mac fork and saves in them
in gem res file format. (*very handy*)

No problem here with CAB 2.5 and MagiC 5.03, except that the first
graphic on the page (at the top) for some reason was ignored by CAB
and neither downloaded or displayed (CAB just put [IMAGE] there).

I'm on atari for year (now on falcon, waiting for better), and I would be
glad to test any operating system ported on it : Kickstand looks interesting.
I'm not sure amiga guys would see intersting features in regular gem, though
;-) (heard about fenix ? does it progress ?)

It can send them much larger. I've sent one mail to someone that was just
under 1Mb. It took nearly 15 mins to send, and about 5 mins to collect the
copy.

The speed of the memory shouldn't really cause any problems. I've 2 STEs
that I've upgraded to 4Mb, along with the wifes. One of mine has 60ns
three chip memory boards, the other has 80ns two chip boards. The wifes
has 2 three chip 80ns and 2 nine chip 100ns. None of these machines have
any problems, even the wifes with the mixed speeds.

Something here does not make sense. If the problem is hardware related
then you are going to get corrupted data regardless of how the
information is being sent to/from the chip. If, OTOH, the problem is related
to software flow control, then using a different communication protocol
could certainly solve the problem. One thing I have found out using
HSM7, STinG with my TT is that the receive buffer in HSM was causing
CRC problems until I set it to 8K. The other thing to check is that
RTS/CTS flow control is set and saved in the Serial CPX that Peter makes
available with STinG. If you cannot get it save then you need to check
for conflicts - possibly another program trying to access the serial
port, etc.

Atari items for sale for the ST family of computers.

1. PageStream V1.8 This a earlier version of PageStream. Comes complete
with 2 floppy disks, a three ringed binder manual and a printed box to hold
everything. This is one heck of a desktop publisher program. Great condition.

2. Golden Image Deluxe Paint with animation. Comes with 3 disks and manual.
The program does graphics, fonts, animation, printing and the whole shabang.
Serious graphics program. Like new and alot of fun.

3. Zany Golf. 2 disk program. It's miniature golf on the Atari. What a
hoot this game is. Very realistic action. Mouse operation with very good graphics.
This program made me late for a wedding once. No,not my own, That is another story.

4. Falcon: The F-16 Fighter Simulation by Spectrum Holobyte. Atari ST/Amiga
version Comes with a large user manual, 2 floppy disks and a code wheel.
Excellent fighter sim.

Submit your offer, as sig members requested, to me e-mail only.
Most items can be shipped very cheap. Shipping is paid by the purchaser.
I need to get these items out of here and I would like them to be put to good use!
I am in Ohio, U.S.A. for shipping concerns.

You should find all you need in the Quick FAQ, everything is explained,
from models to screen modes and expansion, including getting on the net.

If you're planning on buying a machine, the best you can get is a TT030
or a Falcon, depending on what you are planning to do and what you want
to pay. If you mainly want to play games get a good old STE with a
colour monitor.

Please, if you're interested in Atari computers, and bother to subscribe
to a newsgroup for asking questions, it is common netiquette to check
back once in a while to read the answers. It is not always convenient
for some people to reply by email to a newsgroup post, especially whe
you omit your email address.

Cheers,
Nick

I think the only way is trying to reformat the drive, i. e. start
formatting again without interrupting the operation. If you can format
it anymore I don't think you can do anything.

Atari and Amiga share from the beginning the same kernel for Linux. So
there already is an great OS for both machines and an ocean of free
programs. Minor problem: runs up till now only on 68020 or better.

Note that the maximum size of this partition depends on the TOS version.
A partition that is DOS as well as TOS compatible can be as big as a
standard TOS compatible partition can be under a certain version of TOS.
So for TOS 1.0x the maximum partition size is 256 MByte, for TOS 2.0x
and 3.0x it's 512 MByte and for TOS 4.0x it's 1 GByte.

Hi there. I have the following atari hardware & software for sale:-

Atari 520STFM with 1MB RAM
& Autoswitch overscan board 35UKP O.N.O.
& Original Discovery Pack Software & Manuals
(STOS BASIC, First Basic, Outrun, Carrier Command,
Bombjack, also 2 boxes of miscellaneous disks & games)

14Inch VGA Monitor 20UKP O.N.O.

Star LC20 Dotmatrix Printer 20UKP O.N.O.

Alpha Data Hand Held B&W Scanner 25UKP O.N.O.
+ Touchup Software

Software:-

Protext V6.5 (full package with manuals) 8UKP
TCB Sound Tracker 5UKP
Master Sound II Software & Cartridge 6UKP

Games:-
Frontier:- Elite II
F29 Retaliator
The Hollywood Collection (Batman The Movie,
Indiana Jones & Last crusade, Robocop,
Ghostbusters II)
Flood
Populous
3d Construction Kit.
Sapiens
Epic
Robocop III (the 3d game)
Plus many others. All games 5UKP each.

Magazines:-

80+ STFORMAT & Atari ST USER 15UKP the Lot

All prices in UKP.

There's no noticeable 'overhead' in processing a graphic within HTML like
this. I think the browser would have to render it only once, and then do
the scaling based on what's already rendered. It should be pretty easy to
scale a single color ;-).

Related... once I saw CAB 'hiccup' on a tiny non-animated GIF. Ended up
it was because the source graphic (in the cache) was 640x480, but was
reduced to 64x48 in the HTML! It took CAB a few seconds to do this.

Of course it all depends on how the scaling is implemented in the browser
and in the graphics libraries and OS functions it uses. But I think this
is not the first time that I see reports of CAB "freezing" on such an
image, and it just *could* be that Herr Clauss didn't handle this case
carefully. There could also be a bug in the scaling routine when the
scaling factor exceeds some value.

BTW I often seen recommendations to use (say) 16x1 images rather than 1x1,
because they tile faster (on typical PC or Mac installations).

First ask your question in englisch in an englisch newsgroup.

The answer: divde the image in two images writing the even
bytes to the first image and the odd bytes to the other image.

Bye, Hans

: I want to use my Atari sreadsheet LDW files in MS Excel.
: Can Anybody tell me how to do this?
: Thanks.

I do this regularly.

Use the LDWCNVRT.PRG conversion program to convert your .LDW file to a Lotus WKS or WK1 file, which Excel should load with no problem.

To go back again, use the Save As option in Excel to make the file WK1 again (no point in bothering with the format files though!).

It's included in KEMD_R2 (the english version of KGMD).
Look in the MiNT directory.

Another good source of MiNT stuff is ftp.fu-berlin.de also.

This applies to ANY business. I've heard similar horror stories
from people dealing with Toad, System Solutions, Computer Direct...

NEVER put a deposit to anything, especially when it comes to a dying
market where uncertainty is the rule, such as the Atari market.

I know this precludes ever dealing with B & C or Best Electronics
(who both insist you pay cash, upfront, until they're satisfied
that you are a wealthy customer; then, MAYBE they allow you order
using your credit card...), but you have to protect yourself.

Well, it turn up fine at this end.
I try to load it into CAB offline and there was no difference.
AFAIK,- CAB is the only program that will show this kind of JPG`s.

No other APP`s of mine will do.

:
: ...What's my point? I don't know ... peace love and underSTanding?

That's what I like about this thread. I think that ST and Amiga owners
did talk about what makes a good OS verses what makes a bad OS a lot more
than most people, and we all had ideas for the OS. I think it would be
great if we could combine efforts and create the better OS. A user created
and maintained OS. I like the sound of the Fenix project, for example.

I think the idea of porting Kickstand to the ST and vice versa is a good
one, or at least cross compiling applications for the two OS's when
possible (programs that take advantage of special hardware present on one
system or the other obviously wouldn't work, but since we share a common
CPU, and a lot of code is written just to run off of that, why can't we
cross-compile?).

But maybe I will ultimately just have to go out and get 14 megs of RAM and
a bigger hard drive and install Linux.

>Can anyone tell me anything about Steinberg's Avalon sample editor for the
>Atari ST? What are its best features? Would you recommend it? Is it worth the
>asking price?

Avalon was the very best sample editor I never knew ...
The best features in its second version was the virtual synthesis
module, if you had enough memory, you could do almost anything with it
... it was a GREATTTTTTTTTTT !!!!!!

I own the version 2.01, the latest but a pity it doesn't work on a TT
:(this is the main reason why I don't use it anymore ...

If only someone could modify the program to make it run on the TT, I
will be so happy ... I have tried to contact the german authors (some
of them are on the net ...) but I never received any answers from them
:(

It was possible to drive almost any sampler with it an with some of
them the SCSI transfer ... The design was really good ... and the soft
itself was very POWERFULL ... today it's only possible to use Zero-X
but this program is far away from Avalon in quality terms :(

I can now confirm the Lee round has finally agreed to release issue 3 of UFOST, Now please take the time to thanks Lee for his efforts and If possible send somthing UFO related for issue 3.

Make sure you do "something" else he may not be inclined to produce another.

You can get intouch with Lee by simply sending a mail to me, Put "FOR LEE" in the subject and I'll pass it onto him.

Hi

I would agree with Steve, I started with 2 meg and moved up to 4 when
going into "comms" with another set and they work fine.

All the best,

Trevor

Can't find the 'prg at the moment but I ran another before
installing the upgrade board and it told me the port was 38.something!

HSM is after all except STinG but I am not sure how to modify/change
the 2 .prg's.
>

Assume it's "show log file" in Newsie? if so all I get is the date and
time, Program Path, Newsie Version, No AVSERVER found and STiK
version.(I'm using STinG) and nothing else.

>
>Van Jacobsen Compression. .... Once you get everything working
OK, you can try turning >it on to see what happens. 9 times out of 10,

Re: "Viewing pics in MagiC", k_hampf@yahoo.com scribbled the following on 14 May 98 @ 09:15:47:

kh> I want to get 24-bit best quality pictures as fast as the
kh> hardware permits ... and then the DSP is what it's supposed use.
kh> Scaling is not necessary, scrollable buffer is enough.

Sounds like you're describing the Apex viewer (other than the scrollable buffer). AFAIK, it's the only viewer that gives you a 24-bit display on a standard Falcon and it uses the DSP.

kh> Imagecopy? Umm .... what's that?

It's a commercial program with a wealth of features. It supports virtually all the popular formats. It has view, convert, save, screen capturing, slideshow, print and catalog capabilities. Also has many dithering options. It's also still being supported.

You can find out more at FastClub's web site: http://www.compulink.co.uk/~sta

[Backup mode in MagiC]
>Next question: what is the difference between 'backup mode' and
>regular copy mode?

From the manual (hint!):

All files of the same name but with an /earlier/ date stamp will be
overwritten without warning. Those with a later date will be skipped
over or deleted (whilst moving). Note that, even if the target
directory is full, this mode will not display warnings!

>Ah ? I thought the proxy was not used if it was not specified in Cab (when
>using STinG). Am I wrong ?

I think you are. The proxy is definately being used - without it I get
300-700 cps downloads which start immediately. With it I get a slight
delay before the download starts (presumably while the proxy queries
the relevant server for updates) and then 1300-2200 cps downloads
(this is with a 14k4 modem on an unmodified serial port running at
19k2). Also CAB does FTP without an external client with the FTP proxy
listed in default.cfg but not set up in CAB.

3294. ZIP DISKS PC TO ATARI.

Newsgroup: comp.sys.atari.st
Date: 1998-05-14 00:00:00 UTC
From: escaisey@ibl.bm
Message-ID: <355b4843.25867203@news.ibl.bm>
Source record: 100812

If a ZIP disk was formatted on a PC,and loaded with data on PC,
can this disk be read on a ZIP Drive attached to an Atari Falcon
Computer?

Or do we need to format this disk on the Atari platform with BigDos
to make it compatible between both platforms?

What is the proceedure for formatting a ZIP disk with BigDos
I use ICD's HD driver.

Has anyone ever asked this question before?

Are our Atari computers Year 2000 Compliant?
Or does it matter,the internal clock never works
properly.

Thanks!

Hello, I missed the first bit of this thread, but do I gather you're having problems connecting at greater than 19.2K?

Would my configuration be any help?

I've got a Falcon, 56K modem, running Newsie, CAB, Stik and HSModem, connecting to Zetnet.

My e-mail and newsgroups are no problem and quite fast although CAB is not as fast as I'd like. Stik is set up to connect at something like 56K though I don't know how you tell what actual speed is achieved. Also don't know if an STE can achieve the same speed as a Falcon.

Anyway, e-mail me if you want to see my setup files.

This all sounds great, maybe the people that are working on descent for the a1200 (so i have heard) could colaborate with some atari Falcon and some TT people? If anyone wants to try some new stuff then i would love to do some of the graphics. The Linux idea sounds good too, does anyone know where i can get it for the falcon and ST.

680x0 users unite!...

It could be that Newsie can't find it. It should be in the mail folder, but
it may have disappeared. It seems that Newsie _sometimes_ deletes files it
needs, in my case the address book and FTP server list, so I'd check and
see if it's still there. If not, extract the file from the archive and try
again.

Try using POPwatch. It's a very capable mail-fetcher, complete with a
killfile, and allows you to look at the first xx lines of a mail to see
if you want it. It's also able to delete mail without having to download
it, along with sending mail and fetching it in Newsie format. It's located
at:

http://www.the-gap.demon.co.uk/

If you can't get it via the web, mail me and I'll send it to you.

And make sure the names are all upper case. Sometimes windows will keep an
uppercase first letter, and convert the rest to lower. Just another thing
to keep an eye on.

BTW my 'spare' STE, the one without Magic, is quite happy reading discs
that have long names scattered all over them. It never displays the
'garbage' that VFAT puts there to make up the long names, although it
doesn't like deleting folders with the residue left inside. Since I don't
often need to drop back into TOS, it really doesn't make much diference.

SoL works okay on my STE under Magic, unless you try viewing Jpegs, and then
it's a case of 'Memory Block Destroyed'. For Gifs it works just the same as
it does under TOS.

That was what I had, originally in a program I wrote. But for speed, I
changed it to

while (( !fgets(str,4096,sfp))) fputs(str,dfp)

Much faster, and still allows a check on the strings contents. I wonder
if Explorer uses your code to copy, rather than using fgets/fputs or
fread/fwrite instead. Just makes you wonder.

The internal clock works fine until you shut the
power off, unless you've got:
* a hard drive with clock module in the host adapter
* a clock module in the cartridge port
* a TT/Falcon (...maybe an STe, I'm not certain).

And the year 2000 problem is a software problem,
mostly.

In reverse order.

1) Yes

2) Older versions of ICD's HD will not work with BigDos

3) Your best bet would be to replace ICD HD with HardDriver version 7.5.
This supports the Zip and will allow you to read/write to a PC
partitioned Zip cart. On a Falcon HD 7.5 will also allow you make
partitions upto 1 gig that are PC/Atari compatable.

3309. Re: Atari and Amiga Users Unite?

Newsgroup: comp.sys.atari.st
Date: 1998-05-14 00:00:00 UTC
From: dlormand@aztec.asu.edu
Message-ID: <6jfrt0$22r@news.asu.edu>
Source record: 100827

The discussion of what resources are common to Amigas and Ataris,
and porting GEM to Amiga and Kickstart to Atari is interesting,
but fruitless, since it almost certainly won't happen, and is
besides the point. Actually, the critical thing is SUPPORT.

The Atari has remained a viable platform in the face of the demise
of the parent company and virtually all the third-party vendors
solely by virtue of the devotion of its followers. This is true
of all the other orphan computers as well. Through magazines
(incl. netzines, webzines, diskzines; the Atari scene is blessed
with lots of them), BBSs, user groups, shareware authors, and
enthusiasts who go out of their way to help newbies, the life
remains in the old dogs.

But the orphan communities are all so balkanized. For example,
our TI user group is sort of dwindling; it's more of a social
club than a User Group anymore. But we are, and always have been,
ignorant and suspicious of the C64s and Macs and Amigas, and
really won't have anything to do with them. In fact, the trend
in orphan computer user groups anymore is to open the membership
to other computers - but "other computers" is invariably "peecees",
and the interest in the peecee quickly overwhelms the original
charter of support for the orphan.

I don't know if I would advocate opening UG membership to other
orphans, or forming multi-platform user groups, since the user
group idea seems to be on the way out (even for peecees). But
I think we could network a bit more than we do with other
orphan users. Or potential users - like pushing our machines
before the public eye, but as an alternative to the ubiquitous
peecee, rather than (the traditional approach) other non-mainstream
macines.

I don't know how to do this myself. The closest I've seen is the
"Classic Computers" mailing list, which I joined hoping to find
a coalition of orphan supporters, but it turns out to be directed
more to collecting and restoring than actually using.

THIS is the idea I'd like to explore!

> listed in default.cfg but not set up in CAB.

No ftp proxy on my ISP, just a http one, and not good at all.

Bye,
/Pascal/

d> it works just the same as it does under TOS.

Thanks for that tip. I haven't tried using it on GIFs, but I've had the same problem trying to view JPEGs under MagiC. Since SoL has some advantages over other viewers for creating background pics, that info could come in handy.

You'll have bad luck. Accessories may not launch other programs under
SingleTOS, this is due to OS internal limitations. So you won't find any
such thing that works reliable.

Go for true multitasking, you'll like it ;-)

Ah ? I thought the proxy was not used if it was not specified in Cab (when
using STinG). Am I wrong ?

Bye,

I forgot to mention it was with the jpeg ovl from Dieter Fiebelkorn. I did
another attempt this evening with the one from Alexander and it worked
fine. Maybe it's not a coincidence.

Watch your back Amiga RC5, the Atari Force is on the move! (Nothing wrong with a little friendly competition, eh?) If you love Atari, show your support by joining team #3921 today! That is if the stats server ever recovers from the eternal update it seems to be in today... :P (I hope its because they're upgrading the poor thing... :)

No idea what I'm talking about? Go to www.distributed.net. The official team page is at members.xoom.com/8088/rc5/ but is pretty much a placeholder at the moment...

Now where's that Atari client? :)

Er, the opposite actually! It is the improved MagiC memory management which is picking up bugs in programs which were never tested properly before release. ;-)

>Speicherblock durch benutzerprogramm zerstort
>(memoryblock disturbed by user?program)

"MemoryBlock Destroyed By User Program" is what the English version says. All processes have been stopped by MagiC because one of the processes has gone crazy and started writing to memory area(s) it does not "own".

>Adresse des (address of) MCB: $01169EDC (this number varies each time)

MCB=Memory Control Block. It's telling you which section of memory has been corrupted.

>Daten des (data of) MCB: $C7A3A07D (varies each time)
> $277D227D (varies...)
> $287D2250 (varies...)
> $9F7EFF7D (varies...)

The contents of the first few bytes of the corrupted MCB. A programmer might want this in order to identify which process wrote those particular bytes.

>Reparaturversuch (j/n)? (do you want to fix it?)

This doesn't actually "fix/repair" it. What it does is cause MagiC to fiddle around with the "memory blocks" in the hope that it can get itself working well enough to restart as many processes as possible, so that you can save the data they were working with. Always use a different filename (if at all possible) as there is no way to tell if the data you are saving has become garbage or not. If the data loss is unimportant don't even switch to that process - it could have been corrupted itself and take the system down again! Reboot as soon as possible.

>Systemauszug auf Disk: (system write down on disk:)

MagiC dumps the entire RAM to a file in the root directory of the drive whose letter you enter. Hit ESC if you don't want this because if you've got 14Mb ram you'll end up with a 14Mb file with a wierd name! You can delete this manually with no ill effects after you

reboot. I forget the name but its obvious because its the same size as your ram and has some $$$ characters in it iirc.

The idea of the file is that you can drop it on MEMEXAMN and see what went wrong, or more to the point which process went crazy. Interpreting this information is not always easy however. Programs which make heavy use of lots of small memory blocks tend to corrupt themselves, whereas programs which only use a few large blocks invariably corrupt another program and make it appear to be the buggy one.

>what can be the cause and how to fix it?

Locate the rogue process in much the same way you would locate a rogue accessory - trial and error. Just because process A always crashes at a certain place does not mean process A is the buggy one. Some other process may have corrupted process A iyswim. It takes a while but once you've identified the buggy processes and replaced them with alternatives you'll have a system that can run all day without crashing.

Just in case you haven't done so - check that pre-emptive multitasking is disabled in MAGX.INF and have the TSLICE.CPX re-enable it. Having it enabled can cause a lot of crashes during a system boot. The reasons are pretty technical - suffice it to say this is down to the original design of the PC!!! ;-))

>everybody
> is talking about environmental variable, but nobody tells how to apply
>it,

Look for MAGX.INF (probably C:\MAGX.INF) and put them in there using a text editor. If you wanted to create an environmental variable called BOB and set it so that it contained Wibble, you'd enter a line thus ...

#_ENV BOB=Wibble

Another less silly example: Some programs will use a special directory for their temporary files if they see certain environmental variables like TMP and TMPDIR so you could create a folder C:\WORK and set ...

#_ENV TMP=C:\WORK
#_ENV TMPDIR=C:\WORK

(but it doesn't matter if you don't, it's just an example)

> reading this offline (like me) or with a reader like Newsie, that is
> something that does NOT work.

oo-er, that just reminded me of something I never got round to
suggesting ...

I once wrote a really naff little utility which extracted http, ftp
and mailto references out of files. Trouble is I had to save the
relevent news and emails manually beforehand and only ended up with an
html file of links. Not brill but better than nothing, as at least I
got those things done - unlike the situation on the PC where I have to
leave reference stuff unread and never *ever* remember to go check the
unread stuff before getting more news and email, whereupon they all
get lost in amongst the new stuff. :-((

Anyway, what would be nice is if (say) NewSie could export the
references you click on to a "standard" html file (so other readers
could update also)?

Then someone else might write a Cab module to go visit them then
delete them (you'd bookmark the ones you wanted to keep).

======

And on a totally different subject but continuing the moan about PC's,
how the heck can I manage to write ...

```
while ((ch = fgetc(sfp)) != EOF) fputc(ch,dfp)
```

... and find it copies files as fast as Windoze explorer can? Give the
bugger a 16K buffer and use fread/fwrite and it leaves it standing -
BlOATwARE ... [I'll shut up] <G>

Hmm. I wonder if this is the UUD that comes with UUE and the source code for both? Someone call it from a command shell with no arguments and see what it spouts out in the way of "usage". There should be a debug mode so someone could write a dummy UUD which (a) prints out the arguments passed to it then (b) invokes the original UUD (renamed to something else) but with debugging enabled.

Nope, just enter the url. The demon proxy for instance is www.cache.demon.net:8080

> HTTP_PROXY_PORT = 80 (The ISP says port is 80)

Try 8080 for a bit, just in case. ;-)

Last time I used Cab, if you set the variables in DEFAULT.CFG then you could click on the default button in Cab and have them set automatically. This used to be handy when you suspect the proxy itself was caused trouble as you could just clear both fields, try it, then restore it again.

A head cleaning disk will do the job, but to be honest I've had my
head cleaning disk for ten years and only used it as many times. I
consider them a last resort.

Get a blank floppy and see if the atari will format it. If it does and
will access it but won't the other disks you may have a head alignment
problem.

>Alternative - buying a replacement disk drive. What sort of price would

>exist?

Can't remember but it would only be a case of messing with the drive
select line I would think. Easier to put a new internal one in as no
power supply is needed.

>I don't want to buy a high density drive of course.

Some will work as DD drives though, and of course you can replace the
FDC controller (plus a little extra circuitry) and have it working as
a proper HD floppy if you want.

>Another alternative is to buy a new Atari. An emulator is not an
>alternative.

Or get hold of a broken Atari. ;-)

>Perhaps it is not the disk drive's fault after all. Perhaps it's a chip
>or some such.

It can't do any harm to reseat all the chips in sockets. Just push
firmly down on the centre of them all. Aside from oxidizing, the
repeated warming and cooling makes them escape from their sockets.

>Anyway, I would really appreciate some advice. (Is it a disk drive
>problem? What's a solution to the problem?)

In my case I know there is nothing wrong with my Atari. I've said all
this before so I'll be brief (and I'm tired) ...

If I format on the PC and the PC fails to complete then disk is almost
certainly "dead". On rare occasions I can put the floppy into the ST
and format repeatedly until it comes back to life.

If I format on the Atari, then the PC won't recognise the disk -
period. It can read the darn disk, it just sez it is unreadable
because niggly unimportant details in the bootsector are different to
an MSDOS type format (I've proved this by hacking the right values
into the bootsector - no data was lost). I'm running Windoze NT btw.

If I format on the Atari then dump the bootsector off a PC formatted
floppy over the atari one then both machines are happy thereafter. It
seems the PC does not like formatting real DD disks (but will access
them), and is very fussy about the contents of the bootsector. I dunno
if this is a BIOS or NT problem.

Conversely, using an HD disk formatted to 720K in a DD mechanism is
unreliable anyway. So even though the Atari will access such a floppy,
it's never long before it fails - perversely, usually on the PC!

Anyway, it seems I am very much in the minority with these problems.
Most people dont seem to have any problems either way round! However,
it would be a shame to replace parts on the Atari until you have
eliminated this possibility. Try different PC's if you can - there's
many a PC in the high street shops that will access my ("PC
compatible") atari formatted disks. Agh! <G>

See my other post. Writing a PC 720K bootsector over a disk formatted
as DD by the Atari is reliable for me.

>I can think of--buying a HD drive for
>the ST,

Good idea.

>or connecting ST and PC by a cable.

This worked fine for me until NT got confused about the serial ports.
But that's another story!!!

There were one or two STF machine's in the UK. I happen to have one
which I had to buy in order to get the monitor with it. ;-)

It's a 1Meg Tos 1.0 machine, I dunno the motherboard revision offhand.
At first I thought this was odd but then I got to thinking - and I
just remembered something. It must have been an early "high spec" DTP
machine. My original machine was a 1Meg Tos 1.2 revision C and when I
ordered it I had to pay extra to have the Modulator fitted, whereas
the 520 models came with the modulator as standard.

Here endeth the trivia! ;-)

When you copy files, the dialogue that comes up has a number of
options: confirm, rename, overwrite, and backup. If you select
backup, MagiC will compare date stamps and only copy the ones with a
newer date. It does the comparison very quickly, so even if you
select hundreds of duplicates that don't need to be copied as you
would in backing up a partition regularly, it zaps through them in a
few seconds. It's really very handy, and with the flyer I'd just as
soon not mess with compression.

3341. Re: Falcon (w/o DSP) emulator for Amiga?

Newsgroup: comp.sys.atari.st
Date: 1998-05-14 00:00:00 UTC
From: Mark Bedingfield <markb@netlink.net.au>
Message-ID: <355A06DE.9FC89A61@netlink.net.au>
Source record: 100865

It is not possible to emulate a falcon on an amiga, I dont even think an STE is possible because of the differences in DMA hardware. A Falcon can be accelerated to 040 or just 50Mhz, by Titan designs in england. The 040 is expensive but will give a huge improvement in speed. Nemisis will accelerate yor machine to 50 Mhz, for under $200aus or around 75 pounds. You will see a differance as th DSP is accelerated as well. For a cheap improvement try NVDI (screen accelerator).

VERY Unfortunately, the Afterburner040 is no longer being made, and
Titan assures me that there will no more of them from their creators.
Annoyance, frustration, and a whole bunch of four-letter expletives is
all I can show for this, since I have been wanting, hoping for,
wanting, saving for one since I first heard of it a couple years ago.
And now that I have a better income and more of a chance to get one,
they're no more! >:(<--- Ugliest face I can think of at the moment.

Yep, I guess us Falcon owners are stuck with the Nemesis (although
still pretty good for what it's designed to do, but doesn't have the
CPU power of the Afterburner), unless we shell out money for a new
clone that most likely won't run our Falcon-only software.

Neil - that is the one that is causing the problem, at least in my case.

Strange that is should only affect CAB when running under MagiC 4.

> Before, my mail would get sent immediately.

Michael,

This "feature" of STinG seems to affect some and not others. In my case, while the outgoing mail connection takes about 25 seconds, STinG connects to my news server on the first try (usually about 5 to 10 seconds) where STiK takes anywhere from 3 to 5 tries and many times would not get a solid connection even then.

>large for your screen with no apparent loss in quality.

I want to get 24-bit best quality pictures as fast as the hardware permits
... and then the DSP is what it's supposed use. Scaling is not necessary,
scrollable buffer is enough.

>It also doesn't work with NVDI installed. And I find the slideshow feature

That's a touchy concept! Beware!

This Amiga/Atari war and friendship has been around since the beginning. We have always loved to hate each other's platform but willing to admit that the other has som nice features. I've lived in a small community and I beleive I am the only one around where I live that uses a Falcon nowadays. I started with 8-bit 800XL and then I got to the ST, and it's always been me against all the Amiga owners. But that has lead to discussing the dis-/advantages connected with the different platforms and realizing what's good and what's not. All that got some friends to buy ST's others stick to Amigas ;)
The thing my ST ownership and Atari worship lead to was me knowing all about ST worth knowing at the time, discussing hardware and software with the freaks around. And did we get insight? I have a lot of friends from that time, PC owners and Amiga users mostly. We use to look at each others games and demos and try to be a little better than the other. We also code some from time to time, we even had plans for a new 68K OS that never got anywhere ;) Atari doesn't take that much place in my life anymore, I do no longer see myself as an Atari fanatic, I've got a PC (that doesn't work) and a couple of Macs also ... I nowadays use what's the easiest way to complete a task, and I feel sorry about that the Falcon isn't part of any solutions most of the time. But I beleive I've got more "Atari-hours" than many many others :)
What's my point? I don't know ... peace love and underSTanding?

Best Regards, K. Hampf

I actually found the drive again last night, thinking of that HDDriver 7.5 could do the trick, and It's working again!!! BUT! I couldn't use the application included in the HDD 7.5 package in TOS/GEM, it just crashed. The strangest of all, it worked better in MagiC!! I managed to partition and initialize the drive, then I used Diamond Edge 2.04 (also under MagiC!) to map bad sectors (about 4Mb). But I would very much like to try to re-format the whole drive to perhaps get rid of some bad sectors ... but that's impossible with the HD App. It crashed every time in every enviroment.

But I do now have a quite nice temporary storage and MagiC boots at once compared to before ... that on it's own is worth having it connected :) BTW, you don't happen to know where to find a set of screws for all shields, HD and cover for Falcon? I've seem to have misplaced them years ago. :)

(The drive is a Conner Periphals 84Mb original factory fit)

If patience is one of your virtues, you can wait for a CENTurbo II card
from CENTEK, whenever they get round to releasing it. They are said to
be in production and will start shipping next month (that's what CENTEK
says anyway):

http://www.graphity.fr/centek/

I won't add any special support for drives with such a lousy firmware
that the drive is broken after formatting.

The drive should simply do nothing if it is formatted. It should return
an OK status and that's it. This would neither damage the drive nor
would it interfere with the software used to format the drive.

hi there,

no problem. there are many emulators, but the differences between them
are causing problems. there are even freeware-emulators, as well as
commercial ones. i canï¿½t make a suggestion which to use, in fact iï¿½m a
falcon user, but your decision at least depends on the sort of TOS
software youï¿½d like to run on the pc.

the emulators i know are:

Magic PC by application systems heidelberg, germany
STEmulator (available f.e. at Falke Verlag, Moorbloecken
17, 24149Kiel, germany)
Gemulator ???
TOSBOX i think this oneï¿½s freeware and should be somewhere on
the internet
TOS2WIN available f.e. at aixit gmbh, huettenstr. 46,
52068 aachen, germany

youï¿½d better try a freeware solution first....(i think i didnï¿½t have to
mention this...., ;-)), or ask for demo-versions.

surely there are people in this group who know better about emulators,
so watch out for more info and have fun, greets -micha-

I got just the results i want with Draw RGB in TrueColor mode if Misc - RGB was set ... that didn't however have any possibilities to be put in the .OPT file ... and I hoped for a program that could be used in your normal working resolution (mine is non interlaced for example) and the flip to and from the best resolution, in the way JPEGView does. Anyway MGIF seems to be the best program this far ... for viewing a picture at a time ... I spent hours trying to get it to do slideshows in 24-bit truecolor mode ... HOW IS IT SUPPOSED TO BE DONE??? It just won't load anything as RGB when in slideshow mode.

>Please, go to my WWW pages (see .sig) and fetch the latest one, or at least
>check that the latest features mentioned are indeed in the one you got.

Did that, I'll try it later on today ... hope I'll get some sleep this night :)

Yes, there is.
There are many emulators like MagicPC or Gemulator98, with them you
can run Atari-Software in Windows95.

If you would like to run Atari-Software directly under Win95,
you can use "Tos2Win".

Here are helpful internet-adresses:
http://www.aixit.com/tos2win/ (Tos2Win)
http://members.aol.com/ashinfo/index.htm (provider of MagicPC)
http://www.emulators.com/ (provider of
Gemulator)

I hope, i can help you with that.

Armin

It could be: that's tantamount to asking the 1x1 JPEG to be rendered 1800 times. If each time takes 1 second, that's half an hour gone!

Experiment: next time don't reboot, go shopping or mow the lawn or make love to your neighbour's wife or whatever, and see if if something hasn't happened by the time you go back.

Message-ID: <6082_hsideras@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk>
Source record: 100643

Hi Laurent, on 13 May 98 you wrote: ...respect, brethren
lf>
lf> I would like to know the Midi features: speed rate, number of data
lf> bits, stop bits, what parity is used....And how to connect it to a
lf> standard simple TxD and RxD TTL level compatible from a MAX 232 for
lf> example...

The pin-outs are as follows:

MIDI Out:
5-pin female DIN

1 Thru Transmit Data
2 Shield Ground - GND
3 Thru Loop Return
4 Out Transmit Data
5 Out Loop Return

MIDI In:
5-pin female DIN

1 not connected
2 not connected
3 not connected
4 IN Receive Data
5 IN Loop Return

Transfer Rate: 31,250 bps

Data is sent as a serial stream of 8-bit words preceded by a 1-bit start bit and a 1-bit stop bit.

16 MIDI devices or channels can be supported

Each data packet is preceded with the channel number of the device it is meant for. Each MIDI In and OUT port on an ST is coupled to an opto-isolator which prevents any current directly entering the computer from the port. It also converts the current loop signals into the normal TTL levels for the ST. The current loop travels out on pin 4 of the MIDI OUT connector and returns at pin 5 when a device is connected. MIDI IN is reversed where data is received on pin 4 and the loop return on pin 5. No other pins are connected on MIDI IN but on the MIDI OUT connector pins 1 and 3 implement the MIDI THRU function.

3370. SCSI Hard Drives

Newsgroup: comp.sys.atari.st
Date: 1998-05-15 00:00:00 UTC
From: hsideras@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk
Message-ID: <6083_hsideras@mettav.demon.co.R.E.M.O.V.E.T.O.R.E.P.L.Y.uk>
Source record: 100644

Hi All,

I'm in imminent need of a new hard drive. While I've got 87Mb free over 11 partitions, three of those partitons (including C:\) are down to less than 500k.

So what kind of SCSI hard drives are people buying now that are compatible with ST's or TT's.

I've seen some 3 or 4Gb Quantum Fireball SE and Stratos drives at reasonable prices. Are these usable internally with a TT?

In principle, can the internal SCSI bus of a TT be used with SCSI 3 hard drives? Ultra? Wide? Ultra&Wide?

Can anyone recommend a brand of drive currently available in a size of 2Gb or higher?

Many thanks.

Regards, Harry Sideras - UK Association of Atari User Groups

Note that some version of HDDRUTIL 7.5 had a bug the led to a crash when
partitioning. This bug was only present when the English GUI was
displayed is already fixed in the most current versions.
There is a simple workaround: Keep the Alternate key presses when
starting HDDRUTIL. On non-German versions of TOS it will then start up
with a German GUI and there the crash doesn't occur. Except for the
language the German GUI is identical to the English one, of course.

> Computer?

Yes, you have full access to this drive if you install either Big-DOS or
MagiC and use a driver like CBHD or HDDRIVER that supports DOS
compatible partitions that are larger then 32 MBytes.

> Or do we need to format this disk on the Atari platform with BigDos
> to make it compatible between both platforms?

No, this is not necessary. Formatting is always a waste of time if your
drive doesn't have bad sectors. Partitioning is what has to be done. All
drives have the same format, regardless of the platform. The
filesystems, created when partitioning, make the difference, nothing
else.
Note that if you partition your medium with HDDRUTIL (coming with
HDDRIVER) and it's option to create a medium that is both TOS and DOS
compatible you don't need any special software (MagiC, Big-DOS) at all
in order to use this medium with the Atari as well as with the PC.
The demo version of HDDRIVER is available from
http://acp5.chemie.uni-kl.de/seimet/atari_english.html

> Has anyone ever asked this question before?

Yes, this question comes up regularly :-).

> the 2 .prg's.

You need to run the setter.ttp program that's included in the package,
with the prog you want to configure as parameter. It will ask all sorts
of questions in german, but they are translated in the docs.

HSModem is pretty tricky to set up if you have a modified serial port,
you really have to read all those docs carefully. There is also a
seperate package somewhere with the complete translated docs. You'll
find it somewhere on the usual FTPs.

Cheers,
Nick

I would belive it's alright as I asked about putting 2.66 on my
webpage and Gerhard told me it was just fine to do so.

So, does anyone have 2.67 for Falcon yet? Gerhard told me to get it
from their BBS, but I havn't tried it yet. Also my modem is slow
so it would cost me a bit. :-)

Have you told this to Titan? If you all tell David that you want it he
might persuade the makers to do another batch. I do know that they were
planning to manufacture another large batch but the lack of interrest
(as usuall) from Falcon owners stoped those plans. If people would
say what they are thinking the situation could become much better.

I'm finally inclined to think that the problem comes from Magic (5.13
here) because I've just got exactly the same problem when trying to view a
jpg picture with 1stguide.

What make it difficult to find where the problem lies is that sometimes it
works and sometimes not :-(((

it sure did and thanks i put a 3.5" inside my falcon so i had this
spare 2.5",my ste is fitted with the tus ide interface and a 2.5"
drive so with this info i put another crimp on the ribbon and it
works fine and the two still just fit in the standard case

happy and another 720 meg to spare!!!!

I'm impressed! I've got one of those TUS kits, and am really happy with
it, but I wonder how you fitted 2 of those drives in the original case?

How does the PSU cope with running 2 HDs ?

Cheers,
Nick

Reminds me of the good old pre-ST days when I had a CPC. I wrote an ST
"emulator" for the CPC in good old Locomotive Basic. Well, it emulated
the GEM desktop and drop down menus pretty well! I never got past
opening windows though ;-)

Cheers,
Nick

The best one is probably UVK (Ultimate Virus Killer). I'm not sure where
to get it though, however you can also use a copy program like FastCopy
PRO.

There's a program called X-Copy which can copy most disks, but can't you
just copy the files onto a harddrive?

The world's first palmtop computer! The Atari Portfolio runs MSDOS applications and comes with a suite of built-in software including calendar, addressbook, text editor, Lotus-compatible spreadsheet, and file-transfer utilities. Plus there are plenty of third-party shareware apps, including games and productivity tools, available for download. This package includes the Atari Portfolio, a parallel port adapter so you can hook it to your desktop for file transfers, a 64k storage card, manuals, and AC adapter. This is a real collectible! Buyer pays shipping. For more info on the Portfolio, check out this page:
http://www.ncsc.dni.us/fun/user/tcc/cmuseum/Portfoli.htm

The auction is at:

Well if all you have is a ST or Mega it will run. It won't run on a TT
or Falcon and does not do SCSI dumps. If you have a Falcon then get ZeroX.

Also is was buggy with some samplers but worked great with my S950.

>
>If you want the english res files you have to register

Sorry to be blunt, but the problem lies with Joe Connor.
He's taken upon himself WAY too many duties and as a result,
we have to wait for translations of everything:

CAB 2.7 (he handles translations for System Solutions)
Freedom 2.04
...
Thing 1.26

In fairness, Joe's translations and user support is good, but it
would be nice if resources files would be rushed out the door, so
people could at least start using the VERY latest of everything.
Software is usually easy enough to figure out when in plain english;
worse comes, you can use the previous release's docs.

Alternately, install MiNT 1.15.b2 which has built-in VFAT32 drivers.
You won't need MagiC to correctly read/write VFAT longnames and large
clusters anymore. Look it up at: ftp://piwo.bl.pg.gda.pl

Mat, definitely picked a winner. Starquake has been one of my 64 faves ever since I picked it up back in '87. I tried completing it then, as well, every so often these days I give it a few attempts. Of course, no success yet. You mentioned you have maps on your site. That would defintely help, but how would I view this info using the 64, since obviously Lynx is text-based only. If you know or any other dude does, drop a note here on the group or mail me. I would like to complete this gsame once and for all, even if I do need a little assistance (This would not be considered cheating...or would it? I DON'T CARE! HEH HEH!)
Thanx guyz!

BV4 or DIAPO comes to mind. The second is more specialized
to browse through directories via thumbnails pictures.

They both use M&E modules so they can load GIF, JPEG and more
than 100 other formats. The second is known to be compatible with any
graphic card, for BV4 I'm not sure but you could give it a try.
For finding them use Joe's UTSI.

Concerning JPEGD.PRG (all versions) it has a big bug which
causes it to
bomb when given a progressive JPEG. Some applications can
prevent such cases (Wensuite browser by example, uses DSP only if the
JPEG is non progressive).

"Johan Klockars" wrote:
> (MGIF) you won't find a faster GIF decoder/viewer anywhere.

I wouldn't bet. Diapo + shareware GIF module is really fast. The
freeware version is already pretty much the same speed and wasn't that
optimised ;-)

Eric.

Yes, there is!
I've just downloaded and installed a emulator called Pacifist.
Go to this site: http://www.pacifist.fatal-design.com
There you can download the software and all the components you must
have. Read the page well! It took 3-4 hours for me to get it right.
But, now I running an ATARI with 4mb RAM and TOS 2.06. Nice!
Good luck!

I have seen a cheaply priced printer(see subject), any ideas if it'll work on the Atari before I part with my hard earned pennies? Also, will I be able to print colour pictures, ie JPG, GIFs etc.? What is YHO, on the quality of BubbleJets, are the parts expensive etc, do they look better than a dot matrix, in NLQ mode? Will I be able to use internal fonts, if any? Thanks in advance to anyone who can help in this matter.

Regards,

James

IBM DORS series drives (1,2 and 4GB) all work OK, but I still haven't worked out how to make it work with big partitions....I can get it to work with sub 500Mb partitions...I'll try with the version of AHDI that is being distributed with CDRecorder Pro..

BTW:
I have started a service for Atarians to back up hard disks to CDROM's. I'm going to try to do a tour of the user groups over the next few months....small drives will be about 5-10 UKP for a full image backup, bigger drives become negociable.....

I believe this was fixed in the 25-Dec-94 version (I think it was 1994). I
haven't had that problem since using that version. It still doesn't support
progressive JPEGs, but it no longer crashes when trying.

Totally agree with you. In the past I've done a few deals with him.
Within two weeks the ordered goods were always in my possession. I had
more troubles to get the goods from the customs then from Brad. I know
it sounds a little bit stupid but I always have paid in advance. For
one order I didn't even know the exact price. I faxed my credit card
number to him and Bradley debitted my account. That's it. Total trust.

Inversmedia Germany is another company I trust completely.

Thanks to all those who tried the Citroen site in Canada. The problem does seem to be MagiC. I can view the pages, on or off line, using Geneva/Neodesk, TOS 3.6/NewDesk or TOS 3.6/NeoDesk with no problem. CAB 2.0 just hums along. Loading MagiC 4 and trying the same files, either on or off line, causes a system crash when the thin verticle line starts to be rendered (636 byte file). Changing desktops from NeoDesk to Thing 1.09 to MagiCDesk makes no difference. I didn't think it would but tried it anyway.

Thinking it might be a memory allocation problem I limited the amount of memory for CAB to 4200kb (MagiCDesk). Did not change a thing. BTW, all of these different settings were run a bare system - no extra accessories,"enhancements" or CPX's other than those necessary to run STinG.

Thank you for your help, the problem with the cache is that it is
there in the folder, exactly where it should be, but hasn't loaded!
Thanks to group help, I now know what it is for and will ignore the
message, I'm just hoping that it isn't a hard drive problem although
all other Drive C prg's, .ACC's etc load OK.

3405. Upgrading com port on ST

Newsgroup: comp.sys.atari.st

Anyone know how to enable an ST to run a modem faster than 14.4? TOAD use to do these upgrades, but now they're out of the Atari business.

>worse comes, you can use the previous release's docs.

I beg to differ - the problem is not with Joe Connor - in fact the opposite - if he did not tend to these translations then you would find hardly any translations in the Atari market. You think System Solutions and the like are willing to pay professional rates??? Why do ASH not take it upon themselves to do the translations? Do they not care about the Atari market outside Germany?

It was Joe's shareware scheme which inspired me to start mine...

Look at the amount of work he has to do - he is editor of Atari Computing too.. looking after the layout and editing and sending to printers, plus the dispatching.

His work is most commendable and rather than complain and say Joe is the problem, anyone who is able to should offer their help.

Hey, he even has a family to live with... and a life...

I am unhappy that the comment above has been made 'Joe being the problem'. I did not think the Atari market would come down to this. :((

Danny,
Please don't take one person's comments as "the Atari market". As a
newsletter editor myself, I understand the nearly thankless task of layout all
too well. I am glad that Joe chooses to do what he does -- I certainly
benefit from it and am grateful for it.

As for this homepage I am managing.
You downloaded 3 different programs with what is it?
Is your ATARI STF or STE or Falcon?
My program was made for these.
Did you modify extension EXE to LZH?
And,did you thaw the archive?
Please try it again.

Source record: 100689

Hi there!

A few days ago I bought an Atari 1040 STf mainly because it was practically given away and because I once heard a rumour that it was still the ultimate midi thing.

That same day, when I opened it up, I realised that it was more like a poor man's Mac and having an unexplainable sort of respect for anything Apple-ish I got quite enthusiastic. After all something that has got nothing to do with Intel or Microsoft is something special nowadays and worth cherishing.

And now I'm facing a few minor problems:

- I know almost nothing about this weird machine. For my Commodore 64 for example, there was the so called Reference Guide with everything you always wanted to know about this strange plastic object. Does anyone know of such a book regarding the ST?

- I haven't got any software. This isn't really a very big problem 'cause there's lots of it on the internet of course. Now I have to figure out a way to get it from my PC's harddisk on floppy disks that my ST can understand.

- I would love to buy it a harddisk. I read somewhere that it has to be SCSI. Now where do I find a cable to fit in that strange looking connector at the back of this silly machine? Or does anybody know what these pins are for so I can make a cable myself.

Please, I would be very happy if someone could help me out. And I would be even more happy if this someone would send me an e-mail, because I don't visit the newsgroups very frequently and my isp's newsserver has the tendency to miss posts occasionally. I think my e-mail adress is cyberron@wxs.nl .

Thanx,

Ron

>
>How does the PSU cope with running 2 HDs ?

no problem with power these take very little,in fact there is also a
tiny fan near the power supply not that it was needed just that i had
it lying around

to fit the two i measured and fitted an extra crimp connector
i removed the stand off screws from the drive, and one or two screws
from the metal casing in the bottom of the recess,put a very thin piece
of plastic on the bottom,first drive in,thin piece of plastic,
second drive on top

the top casing leg that was removed was filed completly flush and i
nibbled of a couple of tiny locating lugs at the rear over where the
drives are,it is a squeeze but they do fit

next project is to put a 3.5" inside an ste {when i have got one }

3421. TAF MonSTEr Flea Market July 11th

Newsgroup: comp.sys.atari.st
Date: 1998-05-16 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <355d0fd0.0@diana.idirect.com>
Source record: 100695

Subj : TAF Flea Market July 11, 1998.

SATURDAY, JULY 11TH, 1998 is the date for another popular
Toronto Atari Federation FLEA MARKET! The doors open to
the Public at 1:00 PM and runs to 5:00 PM.

Yes, here's your chance to come to a bazaar of Atari-related
software and hardware where you can shop for that peripheral
or application for your ST/TT/Falcon or 8-bit that you've
been looking for. Or, if there's stuff that you have no
use for, get yourself a table and sell! Get rid of your
old stuff or find yourself a treasure!

We're hoping to have some local dealers (and with luck some
out-of-town ones) show up for this event, so we've booked a
larger hall in anticipation of a good turnout. To help with
the costs of the event, the following will apply.

A Half-Table costs just $5.00, Full-Table just $10.00 each.
A Half-Table is FREE to TAF MEMBERS. (Dealers are expected
to contribute a little more <grin>), with entry to the Flea
Market at $2.00 per family (Free to TAF Members).

The Flea Market itself will run from 1:00-5:00 PM (with
setup commencing after 12:00 PM and teardown at 5:00 PM).
This should allow enough time for as many people inside
and outside Toronto to show up. We'll keep you posted on
who will be showing up for this event as we make confirmations.

As usual, piracy cannot and will not be condoned at a TAF Flea
Market - anyone caught selling pirated software or stolen
hardware will be dealt with severely!

Please refer to the bottom of this document regarding getting
in touch with TAF on booking tables or finding the location
of the event - and we'll see you there!

The TORONTO ATARI FEDERATION Flea Market will be held in the
Gold Room of the North York Memorial Community Hall on the
Lower (or Concourse) Level of the North York City Centre
Library Building at 5110 Yonge Street at Parkhome Avenue.
Parking garage inside the complex next to the Novatel Hotel
Those using public transport can take the TTC's line to the
North York City Centre Station and walk through the tunnel
into the concourse, down to the food court, turn left and
find the Memorial Hall.

That's Saturday, July 11, 1998, 1-5pm for the TAF FLEA MARKET.

3422. TAF Meeting May 20th - elections and Suzy B's

Newsgroup: comp.sys.atari.st
Date: 1998-05-16 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <355d10b2.0@diana.idirect.com>
Source record: 100696

Agenda for the May 20th 1998 TAF meeting:

It's election night at TAF, and the first anniversary of the current executive. Did we do a good job over the past 12 months? Think you can do better? Well, that's why we exercise the democratic process at the club - if you're a TAF member in good standing, your vote counts, and you qualify to run for office as well if you feel that the club needs to take a fresh new direction that the current exec is lacking. Don't waste you're vote!

After the voting comes the night's featured speaker - Michael Burkley of Suzy B's Software, one of the largest purveyors of public domain and shareware for the Atari in the world! We'll hear about what Michael has been up to lately, including the re-release of his excellent CD-ROMs of PD/shareware through Floppyshop, and find out just what it's like to run an Atari-oriented business. His last appearance at a TAF meeting a number of years ago was very entertaining, and this night should prove likewise.

And if we have time, Dan will talk about his recent UK trip, complete with pictures and stories about his visits to Atari Computing and Systems Solutions......

See you there!

TORONTO ATARI FEDERATION User Group meetings are held on the Third Wednesday of the Month in the North York Memorial Community Hall on the Lower (or Concourse) Level of the North York City Centre Library at 5110 Yonge St. at Parkhome Ave. Parking garage inside the complex. Those using public transport can take the TTC's Yonge-University-Spadina line to North York Centre Station. Meetings start 7:30 PM, $2.00 to non-members. Membership is $35 CDN a year, and includes a subscription to the club newsletter PHOENIX and full use of the TAF Online BBS. A membership in TAF IS Atari support!

Die Junior-Prommer Software z.B ist in der Lage von sich aus
ein File in High- und Low Bytes zu splitten. Anders geht es nicht.

Take the Junior Prommer software and split your image into high and low bytes.
You need one high and one low eprom (128k)

Regards, Robert

Joe Connor has asked me to post the following on his behalf - he does
not read csas - mainly due to time factors... I would like to add that
he is very activce on the Commercial BBS in the UK - CIX.

Regards
Danny

>I beg to differ - the problem is not with Joe Connor
Danny, many thanks for the vote of support which is much appreciated.

I'm sure Martin-Eric didn't mean to offend and it's true I am the
bottleneck for translations of English releases and it's also true
I've taken on more than I can handle!
I've also been ill for nearly a month with a really nasty flu/cold
virus and, as you pointed out, I also need to spend some time with my
wife and kids!

It seems to me without the efforts of the TransAction crew (Peter
West, Mick Lock and myself) working for "fun" English translations of
the major German applications would not appear in English.

Anyway to keep everyone informed here's what we currently have in
progress:

* jinnee
Currently 70% complete - there's masses of documentation and options
and regular updates to take account of.
* CAB 2.7
Alexander and ASH actually do most of the hard work but I still
translate new bits and provide System Solutions with the final
English translations from which ASH make the master.
* Thing v1.26
Peter West is working on this right now. Obviously the updated
German release throws the English release back further.
* ResourceMaster
Mick Lock is working on the latest release.

* Freedom v2.20e
Mick Lock is also working on this.
* BubbleGEM
Thomas makes the English RSC file and I update the docs, I haven't
had time to do this yet.
* PixArt 4
Needs doing, another massive job.
* Many other projects which need some work done.

Where available I do offer the English beta RSC files to any
InterActive registered user who asks for them. I obviously cannot
release resource files for commercial software or programs with
intergrated resource files.

To help share the translation effort we formed TransAction and we're
always on the lookout for new crew members who can help. We do get
offers of help but what we *really* need are:

* People who can work independently - otherwise it's quicker to do it
ourselves
* On-line - post is too slow and inefficient
* People who can translate English to *good* German - we have a couple
of ideas.
* Poeple who can translate French to English - so far we have offers
from Didier Briel and Colin Watson.

>I did not think the Atari market would come down to this.
The only way is up :-)

* Support Atari authors
* Register shareware
* Buy the most excellent Atari Computing magazine
* Visit the Atari Computing, InterActive and TransAction websites!

FWIW- With Uwe's help, I have a Stacey running with an adaptor in the cartridge port to run the ZIP parallel port drive under HDDRIVER. If I partition a disk on it as DOS and TOS compatible, I can write files to it on a PC but the Stacey reports the disk as being empty. If I partition it as DOS-compatible only, it can be read and written by both machines.

3431. The 9th Adventurer`s Convention

Newsgroup: comp.sys.atari.st
Date: 1998-05-16 00:00:00 UTC
From: Larry Horsfield <Alaric@larryhorsfield.demon.co.uk>
Message-ID: <2ZEcf6AS9UX1EwzY@larryhorsfield.demon.co.uk>
Source record: 100705

Hello all subscribers to C.S.A.St.

If you haven`t already heard about it, you may be interested to hear about the 1998 Adventurers Convention, which is being held in Birmingham (UK) this coming October, as it has been for the last 8 years.

The Convention is being held on Saturday, 24th October 1998, in the Ariel Suite of the Royal Angus Thistle Hotel, St. Chad`s, Birmingham B4, which is at the end of the A38M and easy to get to from all parts of the country.

The Convention runs from 9am to around 6pm and covers all formats from Spectrums to PC`s, including Atari`s. Tables are available if you wish to bring along your own computer(s) and we actively encourage this as we depend on those attending to bring their computers, so the more the merrier! If you wish to bring hardware and/or software to sell you are more than welcome to, but no pirated software please!

The event attracts adventure enthusiasts from all over the UK, including Northern Ireland, and the atmosphere is very friendly and informal. Many of us stay overnight at the hotel and the evenings can be just as lively and interesting as the convention itself! We have yet to welcome anyone from outside the UK to the Convention, but we live hope!

During the day we have the popular "Megapoints" competition running. In this the contestants get 20 minutes playing time at a specially written Spectrum text adventure, with the object of scoring as many points as possible in the alloted time. There are usually cash prizes and special certificates for the 3 highest scores. The adventure this year is being written by Ulsterman Jon Scott, author of various Spectrum text adventures published by Zenobi Software.

Tickets are available now and cost 6 ukp per person if you buy yours before 31st July, 1998. Thereafter, or if you pay on the door on the day, the price will be 7 ukp per person. Tickets may be purchased from:

Vicky Jackson, 128 Merton Hall Road, Wimbledon, London, SW19 3PZ

Please make cheques/PO`s payable to V. Jackson

* * * * * * * *

HOTEL ACCOMMODATION:

The Royal Angus Thistle Hotel has special room rates for those attending the Convention. These include full English breakfast and are as follows:

Single Room: 37.50 ukp per night.

Double/Twin: 32.50 per person, per night.

Please contact the hotel to book your accommodation, NOT the convention organisers. The address and phone number are:

Royal Angus Thistle Hotel, St.Chad`s, Queensway, Birmingham, B4 6HY

Telephone: 0121-236-4211

Don`t forget to inform the hotel you are attending the Adventurers Convention, otherwise you will be charged the normal room rates!

NOTE: The Convention is on the weekend before the start of the Birmingham Motor Show at the NEC. Whilst the hotel have promised to reserve a number of rooms for us, you are strongly advised to book your accommodation AS EARLY AS POSSIBLE to avoid disappointment.

If you have any queries about the Convention, or would like to reserve tables for your hard/software, please contact me at the email address below.

Hope to see you in Brum in October!

Larry Horsfield

> Anyone know how to enable an ST to run a modem faster than 14.4? TOAD use to
>do these upgrades, but now they're out of the Atari business.
>.

Hi,

I got mine from The Upgrade Shop who do a 33.6 and 57.6 modem with a switchable board which requires some soldering to install. If you don't want to do it yourself they run a very fast courier and fitting service, and your machine would be away for about 4 days at most.

Give Dave Escott a ring on 01625 503448 (open to 12.30 on Saturdays) he's very helpful and pro Atari. They will arrange collection and delivery.

It is useful to have a switchable board back to the standard 19.2 as I am having problems with connecting at 33.6 and so whilst they are being resolved it is running fine at 19.2.

Regards

Trevor

3433. Newsie - restoring newsgroup

From: tcjspencer@zetnet.co.uk
Message-ID: <6jjobg$mo7$2@irk.zetnet.co.uk>
Source record: 100707

Hi all,

I had a major crash with Newsie last night which filled the windows with "hyroglyphs". It wiped the outbox of queued mail and appeared to also wipe the NG as the number went to 0. I switched off, rebooted and logged on again and retrieved 3 items which are OK.

I checked the folder and all the files are still in it but for some reason they are not being accessed by Newsie.

Does anyone know how I can persuade it to find these files again as they contain help you've given me that I am still working through.

Thanks

Trevor

>
> Is it Tos 1.2?
>
> iirc, this couldn't handle the blitter properly.

Hi!

As it refers to a MEGA STE, it must be TOS 2.05 or 2.06.
Besides, TOS 1.2 (better 1.02) is called "Blitter TOS" and can handle the
blitter correctly. Only TOS 1.00 cannot.

If the machine works with switched off Blitter, be happy without it, it
seems to be a hardware defect in it.
(In old some MEGA STs there was a correction hardware logic, but this was
not needed in MEGA STEs AFAIK...)

You can try to replace it if it sockketed (not in all board revisions).
It is a square shaped 68-pin-PLMCC chip.

Hope to have helped,
Carsten

> before.

Hi!

This refers to MGCOPY, the file copy client of MagiC 5.0 and above.
Before starting to copy it asks for the mode.
"Backup mode" means that only these files are overwritten whose last
change dates are older than the ones of the files to be copied.
Not clear, huh? It means that you can always copy complete folders without
the fear that a newer file could be replaced by an older one (presuming
that your hardware clock works alright).

Bye,

>
> Can anyone recommend a brand of drive currently available in a size of 2Gb or
> higher?

Hi Harry!

Genereally you can use any (Ultra-/Fast-)SCSI drive.
Generally.

Unfortunately there are models with which you cannot boot with a TT.
AFAIK the Quantum Fireball belongs to these. (at least older models)
(With those you could not disable the request for "Unit attention".
Because of this original TOS cannot boot from those after switching on.)
With the LINK2 adapters at the ACSI port it is possible though.)

You cannot connect Wide SCSI drives! (only the other way round: you can
connect "narrow" SCSI drives to Wide SCSI adapters.)

Hope this helps,
Carsten

>UndeliveredMAILER-DAEMON@*
>Atari-norsk-listeowner-atari@nvg.ntnu.no
>-------------------------------

According to the mailfold.inf instructions there should be a space
between "name" and "address", so I really don't see how _any_ of these
should work.

I would try : TX16W Yamaha_TX16W-listtx16w*@*.eunet.fi

>The biggest problem I have is with the TX16W list:
>
>1) messages written by myself to the list arrives in the "Test-messages"
> group (!!!?!??!)

MAILFOLD.INF is looking in the "Reply-To:", "Sender:", or "From:"
areas of the header, so this is probably why your own mail is being
redirected.

>2) Quoting shows up the same as with normal email, not as the
> "newsgroup" type quote which I've set up for it.
>
>Comparing the Notator mailing list with this one I can't see where I've
>gone wrong... any ideas?

It could be the way the list is sent out...check out the headers of
each list.

Thanks Kevin, I took a glance at your homepage and personally I think
you're ugly.
But then again, so am I and I'm really friendly too. I'm sorry if you're
offended by the words I used referring to the ST. But I honestly like this
cheapo lump of recycled coffeecups ;)

3444. Help needed - Linux Kernel crashes

Newsgroup: comp.sys.atari.st
Date: 1998-05-16 00:00:00 UTC
From: Alexander Selck <asel@stud.uni-hannover.de>
Message-ID: <Pine.GSO.3.95.980516155027.6644A-100000@studserv>
Source record: 100718

Hi everyone,

can anyone help me with the following problem. Whenever I try to run the
Linux V2.xx Kernel on my Falcon (4 MB RAM, 8MB FastRAM), it displays the
following error message:

SCSI controller timed out (long table of hex. numbers here)
Aiee, killing interrupt handler

I've tried unplugging every little piece of hard and software from my
Falcon, but the error insists on showing up. :-(
Now that's strange for the Kernel 0.9 and 1.2 work perfectly with my
setup. I've heard about SCSI problems with old Falcons, does anyone how to
fix them? Has anyone experienced the same problems when installing Linux?

Thanx in advance,
Alexander Selck

3445. Cubase Score 2 Midifile lyric display

Newsgroup: comp.sys.atari.st
Date: 1998-05-16 00:00:00 UTC
From: mike.borsley@zetnet.co.uk
Message-ID: <6jka2pncr1@irk.zetnet.co.uk>
Source record: 100719

Hi everyone,
I have a few midifles which show a brilliant lyric and
chord display on the LCD of my Solton MS50 keyboard. I thought I would try
and make up some of my own midifiles with the lyric and chord display. To
my suprise I couldn't find a way of doing this with Cubase. When I loaded
the files with lyrics into Cubase no matter what editor I chose, the lyric
and chord info remained invisible.

AFAIK Notator and Cakewalk can handle this quite easily, I don't
think there is an Atari version of Cakewalk and having spent a lot of money
on Cubase I don't fancy doing the same with Notator. Am I missing
something? or does anybody know if there is a shareware sequencer that can
do the job.

Thanks for any replies
Mike

Thanks, I found it but I had lots of trouble to reach that site.
So slooooooooow (215 bits/s)

Anyway, I'm able to read/write long file names without the minixfs
driver but I *can't* read DOS partitions >32 MB without Big-DOS.
Are you sure MiNT 1.15.b2 supports large DOS partitions?
I'm doing this on a Hades060 running N.AES 1.7.1/MiNT/Thing
1.26/HDdriver 7.5

Sorry kev, but i have to agree with ron here...
Not about the ugly bit - heven't seen your homepage yet, keep you informed once I have ;) - but about the atari comments.
Basically, in today's age, coming across the ST from the perspective of a PC user is a bit of a schock. I'd imagine that it would seem like a huge leap back in technology - at least four or five years, which gives an idea of just how far the ST was ahead when it came out TWELVE years ago. The great things about the ST take a while to discover, like the fact that it has about the most stable OS i've ever seen, definitely the best user group i've come across, both in terms of knowledge and enthusiasm, and th
e more obvious ones like MIDI and the incredibly low cost of what is still very good computing.
And about the poor man's mac thing, it IS true the GEM was very much 'inspired' by the Mac OS, and the St is cheap, so don't just take these comments as insults - just be glad about the fact that even now there are PC users turning to the ST to fill their every computing wish :)

Hi!

Hop on the Atari WebRing and keep going until you've
visited all the available sites. You may need to
keep notes while you're going, 'cause there's a lot
of them!

When you're done, you'll have an excellent idea of
a) the capabilities of your machine
b) the available software for your machine
c) what it can do besides MIDI
d) the dealers who still support your machine

-- George Crissman
-- strads@tmisnet.com

Oh, yeah. Hop on the WebRing via my Atari Site:

AFAIK it emulates a Deskjet, printing in 600(?)x300. The output is quite
bold, especially the black. I've not used it, a friend has it on his Acorn,
so I don't know what the colour printing will be like from an Atari. However
anything that can print in colour on a deskjet can print in colour on a
JP 170C.

Hey, Does anyone else use WenSuite. I am currently using version 2.04b. There are several thing that I can't seem to get to work these are the newsgroups and mail. Is this a limitation of this version of the software or have I done something wrong during setup. I would like to get the commerical version. I have left OXO systems 3 different e-mails none which have been replied to as of this date. Upto this date I have yet to get CAB with stik or STinG to work. It is ashame that the writers of these or any programs cannot or will not make them USER FRIENDLY! There is really no reason(s) that the end user should have to go into a program and edit a configuration file or a Dialer script. These are areas that the program should be able to do. As much as I dislike my IBM it is a hell of alot eaiser of getting the internet with. Load the software and fill in the information and off you go for the most part. Anyway that is my 0.02 cents worth

Greetings.

A friend has kindly lent me Cubase Score V.2 to try out, as I am editing some large-scale orchestral scores and need the benefit of scaleable staves etc. However, I am confounded by a strange problem which I've tried hard to solve. It seems that the brackets commonly used to group certain instrumental staves together only appear on the first page of the display, once entered, not on subsequent pages. So too, broken bar lines. I could enter these format characteristics manually for each page but this would seem unduly time consuming, as there are a great many pages and all the usual entering and editing takes plenty of time anyway. I feel sure there ought to be a way of forcing the program to format each page automatically, according to the parameters selected on page one. So far, I've failed to find this function. According to 'The Complete Cubase Handbook', it looks as if 'Layout' covers this but, in fact, it only seems to work for page one. Does anyone know what, if anything, can be done to force the score display throughout the score? This is automatic in Notator - which I've been working with - but, sadly, there are only the options of standard size or miniature score display in that program.

Thanks in advance for any advice.

There are several good Public Domain or Shareware software programs that will tell you everything you could possibly want to know about your (working) system. You should be able to find them for downloading from the Atari online software libraries.

One of my favorites is a program called SYSINFO. It works on all Atari ST/TT/Falcon systems. If your communications software can accept Email with attached files, I'll be glad to Email you a copy.

James,

re: your 1040STe

> Also, what kinda memory does it take???

Your system accepts either 2 or 4 standard 30-pin SIMMs. The STe, as shipped from Atari, typically contained four 256k SIMMs. Upgrading involves replacing those with either two 1mb SIMMs or four 1mb SIMMs. You can use either the 8-chip or 9-chip SIMMs. The slightly cheaper 2 or 3-chip SIMMs _MAY_ work, but they can be finicky on some Atari systems, so I normally don't recommend them. Besides, at today's memory prices, the difference in cost is minimal anyway.

Oops. Apparently I had Atari on the brain. I meant an Amiga 1200, of
course.

I do have an Atari 1200XL also, but no 50Mhz '030 in that one! <grin>

>It is not possible to emulate a falcon on an amiga, I dont even think an
>STE is possible because of the differences in DMA hardware.

What I am really looking for could likely best be described as
"AmigaMagic" <grin>; basically a TOS compatible OS written for the
Amiga, that offers extended screen modes (i.e., 640x480, 256 colors),
much as MacMagic is a TOS-compatible OS written for the Mac. If it
were to require TOS 4.0x, and patch code into that, naturally, that
would be acceptable.

The problem with me using an ST emulator, even if it offered advanced
screen modes, is that I do not have an ST, only a Falcon, and
therefore no access to a 2.06 or lower version of TOS without
investing extra money, or resorting to piracy.

To be honest, it is not that vital, I was just curious, since I had
the beefier Amiga at hand, and it may be some time until I can afford
to upgrade my Falcon030.

>Nemisis will accelerate yor machine to 50 Mhz, for under $200aus or
>around 75 pounds. You will see a differance as th DSP is accelerated as >well. For a cheap
improvement try NVDI (screen accelerator).

NVDI is one item I already have (albeit "only" v3).

A Nemisis is on my wish list, but above it is expanding the memory
from 4megs to 14megs. Unfortunately, this will cost around $100 or so.

Unlike memory expansion boards for the Amiga 1200, Falcon memory
expansion boards (especially that single 72-pin SIMM type that are
preferred for use with Nemisis) are rare on the used market.

It is a testament to the greater market success of the Amiga that for
about the same price as a memory expansion for the Falcon, I was able
to pick up a 50Mhz 68030 accelerator with FPU for my A1200.

If Atari had simply installed a single 72-pin SIMM slot in the Falcon
in lieu of the memory expansion board headers, expanding my Falcon
would cost all of about $20. One would have thought that with the
advent of the STe, they would have recognized from that point on that
"SIMMs = good idea".

I hope their reasoning was one of providing a more flexible interface
that could also be used for purposes other than memory expansion, but
I suspect other, less forward-looking reasons, were behind that part

of the design.

From: Dan Mazurowski <smedley@gte.antispam.net>
Message-ID: <355E5E49.237C@gte.antispam.net>
Source record: 100743

I have a pair of TT-030 machines that I no longer use. What does a TT sell for these days? These have both been modified (some of you may be familair the the TT's distributed by DataStitch) and will need some work to get them back to normal. I'm just wondering if I can expect a good enough price for these to go ahead and de-mod them myself, or if I should try to sell them as is. The modifcations affect the printer port and the floppy. (Also seems to affect the serial/modem ports but I am unable to be sure about this.)

hai,

being a unix-fan I am trying to get my mail delivered trough a uucp or a tcp connection. but it won't work. I've read the docs and read them again, but in vain. could somebody help me out please.

I am using KGMD as the MiNT setup, added taylors's uucp and newer versions of the network stuff. I am able to use cab and lynx to browse the internet via a ppp-connection, but no e-mail using elm. and i won't get e-mail nor news working via uucp either. I have to switch back to using newsie, but I prefer elm and tin, so what should i do.

my machine is called SuperST, and my uucp/internet provider's IAEhv.nl
me smail-config file consist solely of domains=iaehv.nl:iae.nl:iaehv:iae
and running mailq -d9 -bv pipo@iaehv.nl gives me something like
scanning /usr/bin/uuname output: done
pipo@iaehv.nl: iaehv.nl matched by uucp_neighbours
pipo@iaehv.nl ... ...: default transport /usr/bin/uux not found
but I have no problems finding /usr/bin/uux myself :-]

hope to hear from someone soon

>
> Why?

Because there is no way for a program to change the resolution in a
clean way. There can't be, because the Atari OS cannot cope properly
with resolution changes due to very internal limitations.

> I use the Apex viewers all the time and they cause no problems. If a

That's your very personal definition, but quite a long way from the
generally accepted definition of a clean program.

> Hey, I think an ACC that blocks the rest of a preemptive multitasking system

That's rubbish. This cannot work in general. It works only with pictures
of bad quality (i.e. little color dynamics).

You might also notice that I *DO* praise your efforts, but also am
aware of the many things requiring your attention, hence my coldly
noticing the bottleneck (as you so call it).

>To help share the translation effort we formed TransAction and we're
>always on the lookout for new crew members who can help. We do get
>offers of help but what we *really* need are:

I was raised speaking BOTH french and english, so this is no problem.
HOWEVER, I cannot help but notice that english is basically YOUR turf;
already, ASH has given exclusivity to System Solutions for their stuff
(in turn, hiring you for the job).

This has recently meant CAB 2.6 not being available to english/world
market, even though 2.7 is about to be released in Germany. Because of
the SysSol exclusivity, people cannot get the latest on time. Already,
swedes are better off, because they can everything from Mille Babic,
since neither ASH nor SysSol have any interrest in the swedish market.

I have contacted a few german authors in the past, about translating
their stuff; Thing 1.26 and Freedom 2.04 (finally fixed for N.AES) are
needed NOW, but both are already under TransAction's wing. This means
people are basically dependant on your team's availability (which in
your case, is a scarce resource: Atari Computing mag, family, etc.).

So again, I completely understand your situation. Then again, I can
feel for people living outside the realms of the MausNet who need
the latest version of whatever favorite software, in plain english.

'Nuff said. ;-)

Rename it to mint115.tgz or something, then call up TAR.TTP with the
following argument: zxvf /path/to/mint115.tgz Z in the commandline
arguments will have TAR call up GZIP.TTP, provided it's in the same path
as TAR.TTP to automatically un-zip it.

If you want a better idea of what MagiC is getting up to then look at
my message in the thread "Re: Troubles".

>Anyone know what's happening?

It's a catastrophic error. Bad enough to not only take down a/some
running processes, but MagiC itself.

What's an Atari ?

3486. Need Help!! Mega ST2. HD question

Newsgroup: comp.sys.atari.st
Date: 1998-05-17 00:00:00 UTC
From: Jeff Thomas <Yanni@mindspring.com>
Message-ID: <6jltmg$9a1$1@camel25.mindspring.com>
Source record: 100755
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I am an Atari Lover and still "new" to the ST line. I was a huge fan of the 8 bit line but have become more interested in the ST line over the last year.....So much interest that I own 4 520ST's, 3 SM124 monitors, SC1435 monitor, several 314 drives, 1040STF, and a Mega2ST. Although I have all these computers, I dont know squat about them......I never knew they existed until last year!!!!

Anyway, here is the problem:

My Mega ST2 (upgraded to 4megs, running NeoDesk 3) came with a Segate (Model: ST157N) 40+Meg SCSI HD rigged in a homemade metal shoe box (have since mounted it in a Mini PC tower). It is hooked to the MEGA via an ICD "box"? Anyway, the 40+ meg drive is part. into 3 logical drives. C: 16meg D:16meg E:16meg

With this information, I would like to ask the following:

1. What is the limit of HD Part. that the MegaST can "see"? Is it 16megs or do you think that is just how the previous owner wanted it?

2. Will any SCSI HD work with the computer? I can buy a 500meg drive for $60 but I am not sure if it will work. If it will, I want to load a UNIX Based operating system to enable me to link the ST to my Win95 PC. I have read that I can map my Win95 HD's to the Atari desktop if I am running a Unix Operating system. If I can accomplish tis without changing my OS, I would love some direction.....The OS change scares me!!!!!!

3. I found an External SCSI CD ROM at work. Its a NEC model 3x. It has the SCSI hookup that is similar to a parallel port but of course very different. Any ideas if I could hook it up to the MEGA with a special cable? Maybe find a cable that converts the SCSI HD cable on one end to the "parallel type hook-up" on the other? Where could I find a CDrom driver? Then last.....where could I find a CD with software on it?

Any help would be appreciated.

Please Email me at:

Perhaps "The Complete Cubase Book" is refering to ver. 3.0 which has
more features then ver 2.0

You can download ver.3.1 thru FTP at:

130.149.17.12 pub/atari/Applications

Since you have the hardware key..it is ok to download it..it will
omnly work with the key, which is why it was allowed on the site.

have Fun!

So you are using the demo version and you cannot write mails or news. You
should be able to read newsgroups. You will not see graphics when on line
either.

> e-mails none which have been replied to as of this date. Upto this

Try again, they are not very responsive :-(
And wait at least for version 3.x on which they are supposed to work hard.

Newsgroup items are held as plain text files in folders with names formed from the newsgroup name. You should be able to load them into any text editor to read, or even just click on them and 'show' or 'print'. They are referenced via a file in each folder called XOVER.TXT, but I wouldn't give much for your chances of reconstructing it if it's missing. The existence of a NG is recorded in the file DEFAULT.GRP, which holds the NG names and number of last item loaded (or next to be loaded, not sure), also in plain text.

Mail items are all held in the MAIL folder in the form MAILxxxx.TXT, where xxxx is a unique number. The items which belong in OUTBOX are indexed in a file OUTBOX.MBX- again, plain text, but tricky to reconstruct.

I backup these critical files immediately after -every- download. It has saved me a lot of grief.

Hello,

Hold down the ALTERNATE key while entering brackets or broken bar
lines or whatever. They should then appear on all pages of your
score.

Wojtek.

Anyone who wants to try an excellent Email program should give Erik Hall's MyMAIL a try:

http://www2.tripnet.se/~erikhall/programs/mymail.html

The program is great and getting better all the time thanks to Erik's efforts. The program requires AES 4+ and I'm happy to report that the program works just great with Geneva.

The program is great. Erik is great. Hey, what more can one ask for.

Check it out!

Pat

BTW, I revised the 1stGuide Homepage today and put up
some 'historical' snapshots, utilizing enhanced PNG
and IMG features while completely avoiding gif usage.
Have a look if you are interested.

Many thanks - problem solved! This isn't mentioned in the 'Complete
Cubase Handbook' so far as I can see, although I think it may be in
the original manual which I don't have at the moment.

Cheers,
EDK

3503. Any network games about?

Thanks. It isn't actually Cubase V.2 but Cubase Score V.2 (I did

download Cubase 3.1 a while back - but no key!). The second follow-up poster had the answer - to hold down [ALT] while entering brackets/breaking up bar lines etc: this reproduces the same on all pages.

Cheers,
EDK

That is not the usual rendering a HEIGHT attribute. Usually, the frame of the
IMG (not an HTML frame) is stretched the size specified in the HEIGHT and
WIDTH attributes, and alternatively, the image is stretched to fit the frame.
Does CAB duplicate the image instead of stretching it and/or its frame?

Or, as previously posted in the "Cracks In Windows Armor":
re-re-install Windows 95
re-re-re-install Windows 95

My favorite .sig (seen elsewhere) is:
"What do you want to install today?"

-- George Crissman
-- strads@tmisnet.com

Followup set to c.s.a.a.

In the March Issue of "PC Computing" (Ziff-Davis
publishing, USA edition, page 87, "Guilty" by
Paul Somerson) is the following (edited):

"OK, I admit it. I was wrong. I've been a Microsoft
defender for a decade and a half ... but today I just
switched sides. And it's Windows that put me over the
edge."

...

"You normally reboot into "Safe Mode", ... but no joy.
And the skimpy manuals, endlessly busy tech-support
lines, and so-called Web support sites were a time-
consuming, useless pain."

"So I reinstalled Windows. It kept stumbling over
files where the versions on the Windows CD (remember,
this is a brand-new PC out of the box) were older than
similarly named files on the hard disk."

...

"So I tried to re-reinstall Windows with the older
files. ... At the very end of the tedius process it
flagged bad clusters, and made me hit the Enter key
to fix them _one_ _at_ _a_ _time_. After _2,000_ (!!!)
mind-numbing Enter key taps, I gave up and propped a
manual on the Enter key to keep it pressed down."

...

"When I eventually re-re-reinstalled it, half the
peripherals didn't work. What a mess. Windows is
the ultimate tar baby -- the more you struggle the
deeper you get until you're hopelessly ensnared."

...

"We recently asked you to tell us your PC horror
stories. And you flooded us with venom-dripping
tales of woe, almost all of them about Windows.
Windows is an utter piece of junk. It is a big
joke, except that the laugh's on us. It is an
absurdly overcomplicated usability nightmare."

"This is nuts. Microsoft _netted_ around $4 billion
from OS sales last year -- you'd think they could
spend a few bucks fixing it."

<wow!> I sent a polite email to Mr. Somerson explaining
that Microsoft's competitor since Windows 1.0 -- GEM --
is still around (as MagiC), that it (GEM) had been
continuously in use and updated during that time, and
that it presented a worthwhile alternative to Microsoft
for basic business applications (specifically mentioning
the Papyrus word processor and the Texel spreadsheet).

He replied that he was "unaware of this development"
and that it might receive coverage in an upcoming
"alternate OS's" article.

Out of seriousness or out of sarcasm does that remark originate?

Most Amiga owners know that most of those who worked on the old 8-bit
Atari line developed the Amiga after quitting (or being fired) from
Commodore when Jack Tramiel bought the company in 1984(?).

No, thatï¿½s not right. You need XMEN_MGR when youï¿½re running *old*
versions of MagiC but not with newer MagiC versions or MultiTOS/N.AES at
all.

Set the /magxignore switch in START.INF.

I tend to do it after I've read and maybe replied but the "crash"
happened whilst I was actually responding to an item.

Actually I could do with a good back up .prg rather than the usual
plod through the work we've all been doing during the day and manually
BAKing them up individually, what do you suggest?

Thanks for your help. What I will now do is to set up a separate
Information/Advice file and transfer the important bits into that.

Trevor

> and/or its frame?

The HTML on this paricular Web page has both height and width defined correctly. The source graphic is a 1x1 JPEG, but sized 1800x1 through HTML. Apparently the CAB problems with this page and its graphics are specific to MagiC only (other CAB users had no trouble). Perhaps the redundancy of a 1x1 JPEG threw some calculations off.

> Commodore when Jack Tramiel bought the company in 1984(?).

Umm... I think you're a bit off here. Jay Miner left Atari while Warner was still running the show because they refused to give him funding to develop a 68000 based computer. I don't know how he ended up at Amiga, but they developed Atari 2600 games & peripherals to fund the design of their computer.

When Jack was ousted from Commodore, he started a new company called Tramiel Technologies Ltd. He hired away many of Commodore's engineers, and they began work on what eventually became the Atari ST.

Meanwhile, Atari Inc signed a deal with Amiga for use of the chipset. The first year would only be for video game use (arcade machines? home consoles?) then after that they could use it in computers.

Then along comes Jack - he buys the consumer products side of Atari, kills all the video game projects and most of the 8-bit stuff, and goes full speed ahead to get the ST ready for market. Thousands of people lost their jobs, but hey are not the ones who designed the Amiga - the Amiga was pretty much done from a hardware standpoint.

At this point, Commodore was stuck with a decimated engineering staff and no next-gen computer design, and Amiga was stuck with an Atari deal that was looking less attractive everyday. So Commodore buys Amiga and the Atari deal goes out the window.

I probably got some of the details wrong, but that's how I understand it.

I've make my complaints about this to MGI Canada. Howard said that the
orders should be shipped by now. So I hope I'll get my order this
week.
I'll send him a last chance mail. If I don't get my goods within a few
weeks I'm serious thinking to bring this to the court also. Anyway
knowing I'm not the only person who is still waiting do me feel a
little better now.

hi nicholas, well kgmd/kemd is really not aimed towards the
installation of the aes. Proper additional docs should come with the
AES you want to install.
If kgmd/kemd install went fine, and that you get everything working,
well kgmd/kemd did the work correctly. Can't blame that really.
Memory violation under the AES most likely because you use MiNT with
memory protection, which can't be effective yet with ATARI programs.
Rename mint.prg into mintnm.prg and reboot and see if any better.
also the order in your auto folder is very important.

On Mon, 18 May 1998, Nicholas Bales wrote:

3533. The ST World, And BTW - Anyone got Forum ST?

Newsgroup: comp.sys.atari.st
Date: 1998-05-18 00:00:00 UTC
From: Brian Saville <somename@somedomain.com>
Message-ID: <01bd82a6$f1c5dc60$53b5e3cf@brian>
Source record: 100552

Well, it has been a long time since I thought about my old Atari ST. Didn't really dawn on me until I saw this NG. What is going on the Atari ST/TT world? Anything? Do they still support it? Do any companies still support it with hardware or software? Are there any active Atari BBSes? In the Chicago area?

Also, does anyone have a copy of Forum ST (aka Turbo ST) BBS software that they wouldn't mind sending me? Hell, if you have the disks and manuals, I'd be willing to buy it. If not an ST based version, there was also a PC based version of Forum.

Thanks!

From: bwarren@ibm.net
Message-ID: <3560C1C3.6AFB@ibm.net>
Source record: 100561

Here I go again. I'm having no luck looking for the code examples. It's really depressing that I lost the code I had years ago. I used to have some code (which I modified) that would allow you to draw in spectrum mode in GFA. You could create graphics on the fly. I modified it for several routines to animate and rund super color graphics.

I wish I could remember where I got it from (a magizine, BBS?) I wish I could find something simple (or write it) to handle rasters (like neocrome does.)

I've pretty well given up on the overscan (not that important really) but I still search for code examples using Spectrum. I have a displayer, but not one that can modify the graphic.

Maybe if I could create a spectrum-compatible file and display it! Ah that would be cool!

Could anyone help? Anyone played around with the old spec-tech or with rasters? I'd love to be able to raster a scan line and use the cool technique many games do for extra color.

-Thanks for anyone's wisdom.

> posible.

The Amiga port of UAE to itself was intended so that KS1.3 ECS software
would run flawlessly on newer KS2.0+ AGA 020+ Amigas.
Incedentally, it runs slow as hell, unless you have at least an 040
accelerator,and even then performance is poor. UAE on the Amiga was never
really neccesary as retrokick is freely available.
>
> >Same goes for a port of STonX to AmigaOS.
>

> have no idea of how good it is.
>
It's OK, but not much interest was shown in that emulator IMO, because the
Amiga is a superior machine for games and apps.
A lot of apps available on the Atari were also available on the Amiga back
then. GEM doesn't really have much to offer either as an alternative to
workbench, except maybe as a curio.

I think emulation of the Amiga custom chips is beyond the Atari, a P200 is
really the minimum spec for any realistic emulation of a 7Mhz A500. CPU
emulation isn't the difficult part where the Amiga emulators are concerned,
but the custom chips are the killer.

Watch a few demos on a P200, and laugh at the crappy interpretation the
emulators deliver, compared to a real A500.

Don't get me wrong, an Amiga emulator for the Atari would be a good thing,
with so many freebies and shareware available from Aminet, it might breathe
some new life into the Atari.
I just don't think an Atari is capable of emulating an Amiga, at an useable
speed.

Regards,

Clockmeister.

I have owned an ST BTW...

3546. Help: smail and uucp

Newsgroup: comp.sys.atari.st
Date: 1998-05-18 00:00:00 UTC
From: Carel_Fellinger@CLIP1.CLIPBOARD.CH
Message-ID: <46B8109453Carel_Fellinger@CLIP1.CLIPBOARD.CH>
Source record: 100565

hai,

being a unix-fan I am trying to get my mail delivered trough a uucp or a tcp connection. but it won't work. I've read the docs and read them again, but in vain. could somebody help me out please.

I am using KGMD as the MiNT setup, added taylors's uucp and newer versions of the network stuff. I am able to use cab and lynx to browse the internet via a ppp-connection, but no e-mail using elm. and i won't get e-mail nor news working via uucp either. I have to switch back to using newsie, but I prefer elm and tin, so what should i do.

my machine is called SuperST, and my uucp/internet provider's IAEhv.nl
me smail-config file consist solely of domains=iaehv.nl:iae.nl:iaehv:iae
and running mailq -d9 -bv pipo@iaehv.nl gives me something like
scanning /usr/bin/uuname output: done
pipo@iaehv.nl: iaehv.nl matched by uucp_neighbours
pipo@iaehv.nl ... ...: default transport /usr/bin/uux not found
but I have no problems finding /usr/bin/uux myself :-]

hope to hear from someone soon

I have a 1040 ST, two floppy drives--everthing except the power supply which has mysteriously disappeared into the recesses of my gragage/house. Will sell drives, CPU, Mouse, joystick, & software separately; color monitor is there, but a pain to ship. All in good working order.

Email offers.

Out of the ether, the following was mentioned by Harry...:

HS> One thing to note with the MegaSTe is that you most turn off the
HS> processor cache for it to work - or that was certainly the case
HS> with the Naksha scanner I have...
Funnily enough my Daatascan Pro works on my STFM at both 8Mhz and 16Mhz (ADSpeed accelerator), it also worked on my Falcon with both the caches on and the CPU@16Mhz. I haven't tried it on the Falcon since I had the Afterburner/Nemesis fitted but as I now have a flatbed scanner that isn't such a problem.

Out of the ether, the following was mentioned by tos4ever@ping.be...:

t> Almost a year ago I sended in a order together with the money for
t> an update of Calamus SL95 (Britisch Firm). I still haven't see
t> anything. They never have send me an e-mail explaining why they
Well this self same British company cashed my cheque for both an SL upgrade as well as some other items (over 300 UKP) well over a year ago and to date apart from a few emails I have had no other reponses (they sent a few minor parts of my order but nothing else).

Now I have heard that some people have finally had their orders fulfilled (and one part which I have paid for has been supplied to them for free!!!) So I have now emailed them again demanding an explanation as I am really fed up with this whole situation/saga. If I don't get a satisfactory reponse by the end of June then I shall consider persuing it through the small claims court.

The "Minimum sector size" option was present in old versions of HDDRUTIL
but was renamed. Simply forget this option and partition the drive with
HDDRUTIL and its standard settings. You will exactly get what you want.

Check your version of HDDRIVER/HDDRUTIL. HDDRUTIl 7.10 and 7.11 didn't
always create TOS/DOS compatible partitions correctly, depending on the
partition size. The result was like you described it for your system.
This was fixed some time ago.

The max speed is 19200bps, not 14400.

there are DIY instructions on most Atari FTP sites on how to upgrade the
serial port. If you don't feel comfortable with doing the job yourself,
get a TV/Hifi repair shop to do it. They should be able to handle the
soldering.

Cheers,
Nick

Some (especially older) IDE drives are damaged when they are formatted.
This is a severe firmware bug. If you are not absolutely sure that your
IDE drive can be formatted, don't do it. Current drives shouldn't have
this bug anymore, but you never know ...

I wouldn't say it's a poor mans mac. At the time, the ST was much better
than the mac for a quarter of the price.

Check out the Atari ST Quick FAQ. Most of your questions will find
answers in there. A book about how to use the Atari wouldn't be very
thick anyway since there's not much that you can't figure out on your
own.

http://wwwperso.hol.fr/~nbales/quickfaq.htm

Just format a 720K floppy on the PC. Simple as that.

If you're interested in MIDI, I suggest you get a 2nd hand copy of
Cubase or Notator instead of messing around with shareware. None of the
shareware programs can compete with the older commercial products IMO.

>
> - I would love to buy it a harddisk. I read somewhere that it has to be

No, this connector was for Atari HDs, which are not really a viable
option nowadays. You need a SCSI host adapter that you can't really make
yourself as it include proprietary PALs and GALs, etc... Since you
appear to be in the Netherlands, you might want to ask MABN
in the Netherlands: http://www.xs4all.nl/~mabn/

The limit depends on TOS and the HD Driver software you are using. Yours
is probably ICD software, though I've no idea what the limit is.

If the ICD "box" is a Link interface, it should handle most SCSI drives,
though only a LINK 2 will handle parity, so you must be able to disable
parity on the drive if you won't use it.

For a Unix-like OS, you'll need MiNT. Linux is available for 030
processors only, so it won't run on an ST. Look for the KGMD
distribution and the KEMD translation on ftp.funet.fi for example.

That's called piracy. There are plenty of people selling second hand
games. You're reducing the value of what they have to zero.

> How I can use this disc images on my real atari? Where I can get a tool for
> this ?

Don't.

>

3564. MiNT Setup

Newsgroup: comp.sys.atari.st
Date: 1998-05-18 00:00:00 UTC
From: Nicholas Bales <bales@hol.REMOVE.THIS.fr>
Message-ID: <356002BB.6FACA24@hol.REMOVE.THIS.fr>
Source record: 100614

I'm in the process of trying to get MiNT up and running. I've installed the KGMD + KEMD packages without any major problems (only the kemd docs omit the need to copy the init.prg over to the c:/multitos directory, this needed a bit of head scratching before figuring that out).

Now, I'm trying to run the AES4.1 (the one that comes with the KEMD distribution), so I start GEM.SYS, and it loads the ACCs and stuff, and then hangs with a memory violation error on NEWDESK. Is it trying to load the ROM desktop ? How do I tell it to launch Thing ? I tried editing the gem.cnf file, but it didn't work.

Do I need anything else ? Should I try another AES ? Which one is freeware ?

Cheers,
Nick

At least he is an atari owner ... not some pc nonce that thinks Atari's
are a retro novelty.

Nicks right tho Wegner, it is piracy or at the very least don't ask on
comp.sys.atari.st ... and that isn't a hint to ask me either!

I've been experimenting with the same setup. I've used MINT before
now but I've just recently aquired AES 4.1. My original MINT.CNF had
"cd U:\" but I read in KEMD somewhere to change that to "cd C:\".
This causes the system to hang. So I'm back to "cd U:\" and
everything goes OK.

My MINT.CNF reads (in part):

```
setenv THINGDIR d:\thing
setenv AVSERVER thing
cd U:\
INIT=U:\c\mint\gem.sys
```

Note that I'm not using INIT.PRG. THING is autobooted from
NEWDESK.INF.

I haven't played with this very much, but it loads in the
multi-tasking AES and it works OK, if a bit sluggish. This will give
you both the THING desktop and the ATARI desktop, the latter can be
removed by pressing <control> while selecting it from the desk menu.
This saves about 1K in memory.

The one thing I haven't been able to figure out is how to get WINX to
run under this setup. Any suggestions?

I didn't realize the title was "Yamaha_TX16W-list". I have just one
space in my MAILFOLD.INF like this:

Yamaha_TX16W-list tx16w*@*.eunet.fi

>>MAILFOLD.INF is looking in the "Reply-To:", "Sender:", or "From:"
>>areas of the header, so this is probably why your own mail is being
>>redirected.
>
>This is the part I don't quite understand (yes, I've read the docs) -it
>looks for all 3 of those? Isn't it possible to ask it to look for just
>one of them?

I guess it looks at all three and it goes in the first mailfold that
matches. _IF_ this is true, maybe you could change the order of the
MIALFOLD.INF so that your mail is the last line. Just a guess - I
have no idea if this will work.

Plenty, it looks like you're in the Netherlands, so have a look at mabn computing, then there are plenty of dealers in Germany, in France and in the UK.

You can start by going to :
http://www.geocities.com/SiliconValley/Bay/8745/

Cheers,
Nick

> as soon as someone feels like implementing it... (The Falcon MP2 player
> sources are available, as are sources for MP3 players...)

I have tried to convert the amp player to DSP code. However, I gave up, for some reasons, one including boredom and lazyness. :) The amp player seemed as a good choice to start at first, because it was the fastest C decoder around at the time. But it was optimized for Pentium machines, which uses completely different optimization routines as DSPs.

About using both CPU and DSP.. I (we) also had that idea at some point. We thought that it would be a good idea if the CPU took care of integer things, up to and including huffman decoding, and then send the stuff to the DSP to finish the work. But, after some calculations, we came to the conclusion that it would be _far_ too much data to be shipped from the CPU to the DSP, the bus just wouldn't be able to.

> : I suspect something with an FPU would help quite a
> : bit... Using MP2 may help too. Anyone know where to find an MP2 encoder?

The FPU couldn't really help with much on the Falcon, since most of the player would have to be in the DSP, not in the CPU. In our MP2 player, the DSP takes care of _all_ decoding, the CPU is only used for loading from the disk into the DMA buffers that the DSP gets the MP2 stream from.

> There's an MP2 encoder freely available somewhere, try a websearch using
> Altavista (that's how I found it). I think it's even been ported to the
> Atari as well (can't remember where I saw it, maybe at ftp.lip6.fr...),
> but it takes about a day to encode a typical MP2 file :)

http://noring.org/mp2 is the official page for our MP2 player for Falcon. Sources and binaries are in the same package. They haven't been updated in a long time though, and most likely contain some bugs.

If you're a Linux/m68k user and have a Falcon, you can get the stuff needed from ftp://ftp.nocrew.org/pub/nocrew/linux/.

All of these things are released as GPL. I'll be glad to _try_ to help anyone who decides to give it a shot, but most likely, I won't be the one making an MP3 player.

Greetings,

Tomas - tomas[@.]nocrew.org

3578. 3 Analog 8's and 1 FDI for Auction!

Newsgroup: comp.sys.atari.st
Date: 1998-05-18 00:00:00 UTC
From: kws@Radix.Net
Message-ID: <6jpokg$6ta$1@news1.Radix.Net>
Source record: 100628

Hello!

I have 3 Soundpool Analog 8 Interfaces for the Falcon and 1 Steinberg Falcon Digital Interface for auction.

2 of the Analog 8 Interfaces are new in box, still sealed in plastic. They contain the Demo disk, the short 15 pin to 15 pin ribbon (both ends female), and the Soundpool docs for hacks the Falcon may need to get the interface to work properly. A power supply is not included (I don't know the specs for it, and one was not included from Toad). Also, there isn't any real docs (don't know if this was ever included either). Item is sold as is. Buyout price for each is $550.

The third interface is loose, is missing one of its rubber feet, missing a hex screw (I might try to fix these two problems), does not include a disk, but does include the short cable and a copy of the Falcon fixes that might need to be done. Item is sold as is. Buyout price is $400.

The last item is a loose Falcon Digital Interface produced by SoundPool for Steinberg. Its a small maroon colored box with a coaxial in and out, an optical in and out (with caps on them right now) and a 15 pin DSP-Port connector to goto the Falcon. It is marked for use in the USA on the bottom. No software, docs, or cables included. Item is sold as is. Buyout price is $250.

Shipping will be extra (UPS ground insured for the sale price of the item to US destinations, Canadian destinations can choose between Postal service or UPS (have heard too many Canadian horror stories about UPS)), MD residents will need to add 5% sales tax, standard internet auction god rules apply. If too many parties are interested in the above items, they will be placed on Ebay, or the bidding will just be allowed to break the buyout price. Payment via money order only. Auction will run til about 5/28/98, but could be cut short.

I've been having similar problems. Whenever I run any AES (I've tried AES 4.1, Xaaes, and the Geneva demo), I can get to the desktop, but when I try running any programs of any kind of size (MOST smaller programs seem to run ok) I get either memory violation errors, or priviledge violation errors. Sometimes I also get something about the kmalloc (I think that's how it was spelled) not being set large enough. How can I fix these problems? I especially have problems running STiNG and anything having to do with STiNG (CAB, Newsie, etc.) and NeoDesk 4 - at least so far, because I haven't tried much more than these yet. Thanks! And thanks for those who sent me your Mint.cnf files! They did help solve some problems. It's a LITTLE more stable now!

Hi Nicholas,

NB> I'm in the process of trying to get MiNT up and running. I've installed
NB> the KGMD + KEMD packages without any major problems (only the kemd docs
NB> omit the need to copy the init.prg over to the c:/multitos directory,
NB> this needed a bit of head scratching before figuring that out).
NB>
NB> Now, I'm trying to run the AES4.1 (the one that comes with the KEMD
NB> distribution), so I start GEM.SYS, and it loads the ACCs and stuff, and
NB> then hangs with a memory violation error on NEWDESK. Is it trying to
NB> load the ROM desktop ? How do I tell it to launch Thing ? I tried
NB> editing the gem.cnf file, but it didn't work.
NB>
NB> Do I need anything else ? Should I try another AES ? Which one is
NB> freeware ?

Have you a MINT.PRG or a MINTNP.PRG ?

You need to run MINTNP.PRG if you have a > 030 processor

Bye, Nicholas

Yay! Cool! The Senior Dads really like Michael Burkley after his review of the "ST Floormat" demo (Which now takes pride of place on our site at http://grelb.src.gla.ac.uk:8000/~mjames/senior/features/presstrail/aph.html !!!) Say "hi" to him for us if you're there, and tell him we really liked his review!!!!

I would like to attend, but unfortunately, I'm a poor young demo coder in Scotland, and probably can't afford it!! It's a shame they can't have a World of Atari in Milton in Central Scotalnd, as it would just be around the corner from me! :)

Still... You know what they say about Las Vegas... If the Senior Dads went along there, we would have to have some "protection" and "insurance" in case of "disagreements" with others with certain "business interests". Not that we're afraid of horse heads appearing in our beds or anything ha ha. In fact, forget we mentioned horse heads, you didn't read this message, right?!?!?!

3587. New at Systems For Tomorrow (May 18, 1998)

Newsgroup: comp.sys.atari.st
Date: 1998-05-18 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <6jq0nu$o5n$1@sunset.kansas.net>
Source record: 100637

New at Systems For Tomorrow May, 18th 1998
~~~~~~~~~~~~~~~~~~~~~~~~~~

New Software from Softjee!!!!

MidiPlay $49.99
This is a player of MIDIFILE without additional hardware for the Falcon030!! It plays the MIDIFILE with digital sounds! Features: Play all the MIDIFILE following the GM norm * Up to 24 voices on an normal Falcon * Each channel have a dynamic polyphonic voice. * You can change the sound of current channel. * Function SOLO (play only the channel), MUTE (not play the channel). * Viewing of volume, information for each channel, bar, time, etc...

Digital Home Studio $129.99
This is a 32 tracks editor/player of audio/midi channel tracks for the Falcon030. With DHS you've got a editor of track, a sampler, a multi effect and an station of Direct To Disk! Features Include: Up to 64 audio channels (depending of your speed system) * For each track, you can programming anywhere in the music, the panning, volume effect, the volume, master volume, etc... * You can put or stop an effect anywhere in the music. * Up to 9 octave to replay audio sound or Midi sound. * Sound up to 50Khz 16 bits stereo * Up to 12 track in Direct To Disk (C.D. quality) * Up to 32 Midi Tracks * Mix audio tracks, D2D track and Midi Track in the same editor of track. * You can put a D2D file anywhere in the sequence * Digital Effects (Echo, reverb, flanger, equalizer, etc..) avaible on audio track or in the sample * Without quitting DHS, you can sample and work on sound (cut, copy, volume, autoloop, etc..). * Sampler avaible with Digital Effect (Reverb, etc..)

Expand $64.99
EXPAND emulates a Midi Expander on your Falcon030 computer. Loading audio sound, you can plays them even in D2D. Features: Play instrument like a Midi Expander * Use Audio instruments with multi-sample, envelop of volume, pan,... * Each channel have a dynamic polyphonic voice. * Use the 16 Midi channels * Understand the most of Midi messages like program Change, Note-on (with velocity), Note-off, Pitch,Main volume, Pan pot... * A very good interface.

Live Machine $64.99
Live Machine is a D2D program for accompanying someone during a concert. Live Machine can be controlled by MIDI messages! For the Falcon030.
~~~~~~~~~~~~~~~~~~~~~~~~~~

For more information or for demo version of the above Softjee products go to http://perso.wanadoo.fr/softjee/ on the WWW.

Fontmania CD $15.99
While this CD is not an Atari specific disc, it does provide a wealth of fonts usabe by Atari owners. Includes: 1900 Adobe, 200 Calamus, 1100 CG Fonts, 300 bitmap GDOS fonts, 170 fonts as IFF pictures, 130 Pagestream, and 1400 True Type. Other font types that require long filename support are also included. From Weird Science.

HD Driver 7.51 $49.99
The latest version of the best Hard Disk utility software. Updates to v7.51 for owners of 7.x are only $5 for postage and handling. Send your origional disk to: SFT - PO Box 3034 - Independence MO 64055.

Delta Labs CD for TOS Computers
We have received new stocks from delta labs! These German CDs contain all kinds of goodies. Most contain some full versions, and though they are German CDs, English software can often be found. For detailed information on each CD go to http://www.deltalabs.com.

Whiteline Alpha $34.99
Whiteline Gamma $34.99
Whiteline Delta $34.99
Whiteline Omega $34.99
Whiteline PSI $39.99
Whiteline Linux/68k 2.0 $44.99
Whiteline Complete MiNT '98 $34.99
Whiteline all about Signum! $29.99
Whiteline Substance $34.99
Whiteline Transmission $19.99
Whiteline Selected Signs $29.99

Revolution CD Magazine
We now have limited stocks of the first seven issues of this German CD based magazine! Each issue contains German language articles and reviews stored in HTML format. Additionally each issue contains around 100 MegaBytes of Atari Software in various languages (including English.) Only $11.99 each, or only $49.99 for all seven.

Ultimate Virus Killer 2000 for TOS Computers $19.99
The Ultimate Virus Killer 2000 (version 8) is probably the most versatile and definitive product in the battle against computer viruses on the Atari ST/STE/TT/Falcon; a full- fledged tool that has taken many years of painstaking development. You can use this tool to de-infect your disks and programmes, destroying the viruses and leaving all other information and data intact. UCK2000 will recognize and destroy over 100 viruses! The full version is only $19.99, upgrades from any previous version are

only $7.50 (requires the return of your origional UVK disk.)

Atari Computing Subscriptions
In addition to our standing order option, we are now accepting 3
and 6 issue subscriptions to Atari Computing. Here's the deal:
(Prices include Reader Disk and delivery to US or Canada.)
Standing Order: $11 per issue (must have a credit card)
3 Issue Subscription: $30
6 Issue Subscription: $55

Suzy B's Treasury Vol 2 CD $29.99
This CD from Suzy B Software continues the tradition of bringing
you "a honey of a deal." It includes the best in Atari PD and
Shareware, all clearly described by "The Unabashed Atariophile"
of Z*Net, AEO and ST Report fame. It's been three years since
the first collection and thousands of new files have arrived.
Most files are compressed in ZIP format in order to fit more data
onto the CD. We also have received more copies of the origional
Suzy B's two CD set, now also priced at $29.99. Or take both
volumes (3 discs) for only $47.98! From Suzy B's Software.

Electronic Cow!
Three cool music applications! For more information check out
the Electronic Cow link on our web site!

MIDI Arpeggiator for TOS Computers $27.99
Sound Chip Synth for TOS Computers $19.99
Snippit Synth for TOS Computers $29.99

Also Available:
CAB 2.5 $49.99 HTML browser /w PPP socket for MagiC
Atari Works $79.99 Easy to use home/office suite.
Lattice C 5.6 $139.99 C Compiler.
True Image $29.99 Image Processing Package.
Alien Thing (Expert) $19.99 Alien Blasting fun!
Tetris II $11.99 Cool Tetris game
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

> > Any one know of a good 8 track tracker for the Falcon 030 ??
> Try Graoumf Tracker or Digital Tracker! Gives you 32 channels!

Well I hope Digital Tracker is a bit more stable now, as it keeps
crashing on my Falcon!!! (Mind you, my Falcon is a bit strange
anyway!) Also, Graoumf Tracker doesn't save in the normal
version. I've sent off for the full shareware version, but I haven't
had any word back yet- bah!

So, at the moment, the only 8 channel tracker for the Falcon I
can recommend is Octalyser!

Hi!

In article <356055ca2121451@post1.com>,
hall@post1.com (Hallvard Tangeraas) writes:
> So why doesn't this work simply by converting those colour icons into
> mono? Are those "animated" and colour icons built differently than mono
> icons (apart from the obvious fact that the pixels are coloured that
> is)?

Yes, mono icons may even be different from color icons with only one
plane (i.e. mono as well). Mono icons only have one "face", when you
select them, they simply get inverted. Monochrome color icons, though,
may also have a different "face" for the selected state, i.e. they're
"animated".

If, however, you want to have monochrome animated icons, you still have
to use color icons. You can of course delete all the information for
color resolutions, but you have to create a new "selected" state for the
1-plane-resolution. This is quite easy with Interface, I can't say if and
how that works with other programs like ResourceMaster.

Ciao

Thomas

It all depends on your newsfeed. Not all newsservers carry all groups.
Ask your ISP for the groups you want, if you are able to handle german.

Cheers,
Nick

> this doesn't matter anyway, what do I know? :-)

No, it doesn't matter, it's a matter of bytes/second. With decoding up
to and including huffman in CPU, it's too much data per second that
would have been needed to be shipped to the DSP. It's not
possible. The only alternative to that, is to send data before huffman
decoding and let the DSP do that part too, but there's not really that
much before that anyway, so in that case it could just as well do the
very first parts as well.

> Anyway a MP3 player would be very nice even though there is a new standard
> on it's way so MP3 will probably be loong forgoten when we get a player. If
> the Amiga can do it, why not a fast Atari?

A fast Atari probably could, maybe a 50MHz 030. I don't know what the
requirements are for the Amiga player, but it's most likely far higher
than 16MHz 030.

I doubt the new standard (MPEG AAC, or MPEG4) will be easier to
implement. For a full implementation, there are three different kinds
of decoding necessary. Although, I think only one of them will be used
for what MP3 are used for today, the other two are for lower
bitrates.

Th only sources I found (pointed to by you, Magnus) only supported
mono, and it said that was the only thing that had been implemented at
that time. I suppose there will be a bunch of sources some time.

For the interested, I got this link from someone:
http://www.sparta.lu.se/~bjorn/whitney

It's an MP3 player based on a TMS320C31 DSP, which he is running at
60MHz, and has 32k x 32bit zero-wait state RAM. It's substantially
faster than the normal, unaccelarated DSP in Falcon. However, it's the

only source I have found which is optimized for any DSP at all. I haven't looked very much at it, so I can't say how difficult it would be to convert it to 56001 code. Personally, I don't feel much up for it, but someone else with a lot more energy might. :)

Greetings,

Tomas - tomas[@.]nocrew.org

3595. FS: Complete Mega ST4 system & Software

I have a complete Mega ST4 system and a TON of software for sale. Sale is open to US RESIDENTS ONLY. I would prefer to sell the whole package as one lot, but will consider offers for individual pieces of software.

Package Price: $600+freight, obo. Inquiries should be directed to

WFChris@aol.com

The package includes the following:
Hardware
1 Mega ST4 & Keyboard
2 Monitors; 1 SM124 momchrome & 1 SC1224 color
1 monitor switch box
1 mouse
1 joystick
1 MouseMaster switch box
1 ICD 44 mb Syquest drive
1 SF314 external floppy drive
1 Cannon BJ10e bubblejet printer
1 Supra Modem 2400 (ok, its not very fast, but it was good enough for GEnie)

Software
Applications
Calamus
Flash
Clean Up ST
Word Perfect
Degas Elite
Data Manager
Word Flair
various utility programs such as NeoDesk
Games
Maniac Mansion
Empire
Star Wars
Gauntlet
Warlock
ArcticFox
King of Chicago
Thunderbirds
SimCity
Ancient Art of War in the Skies
Steel Empire
ShadoWorlds
Balance of Power (1990 ed)

Rorke's Drift
Railroad Tycoon
Storm Master
Populus
Power Monger
War in Middle Earth
Defender of the Crown
Lemmings
Hitchhiker's Guide to the Galaxy
F-16 Combat Pilot
Star Glider
Jeanne d'Arc (in German)
The Secret of Monkey Island
Autoduel
Hard Drivin'
Civilization
Realms
Their Finest Hour: The Battle of Britain
Frontier: Elite 2
Thrid Riech
Pirates!
Chronoquest

In fact, my experience with Hewlett-Packard printers
(at work, on an Intel/Microsoft machine) was so bad
-- three replacements in one year due to a variety
of defects and software-driver incompatibilities --
that I wound up begging for an Epson Color Stylus.

At home, I routinely move my ECS 800 between Atari and
Intel/Microsoft computers with no difficulty.

Buy an Epson!

>What's an Atari ?

Now THERE'S a question!

The consoles:

Pong. The Atari VCS with that awesomely bad joystick. Then the 7800 came along. That was kinda nice. Anyone remember "The Adventures of Cute"?

The computers:

The Atari 400 started it all with it's podgy design and membrane keys. Then..erm...was it Jay Miner? Anyway, he designed the 800 - a seriously wicked machine for it's time.

Then, after the XL 8-bit range, came Atari STs. The healthy competition to the Amiga. In fact, I loved Atari STs so much, I didna change to the Amiga until 1991. But I've never looked back.

Anyway, the Falcon was a technically sound machine backed up a failing company.

And finally - "Atari Teenage Riot". Oh dear.

It's strange how die-hard Amiga users have become with their machines. Four years have passed silently and yet advocacy is still alive as ever. Where would I be without my morning fix of Arami, Viper, Corn and Jack Andrews, Pete Kittel and the rest of them? :)

The Atari's still cool by the way....

Charles,

Simply have your friend go to www.shareware.com and do a search for mime decoders and he will find one, I use fcode which works great, it encodes and decodes multi-part mimes extremely fast and efficient.

3600. Help: Installing applications

Newsgroup: comp.sys.atari.st
Date: 1998-05-19 00:00:00 UTC
From: shimh@clpgh.org
Message-ID: <6jsjeq$cj8$1@nnrp1.dejanews.com>
Source record: 100500

Hello,
I need help installing Notator into the hard drive of my Mega ST2.
When I select the application off the disk, then highlight install app. from
the options menu, I select GEM, name it as a PRG file, then hit ok. It doesn't
do anything after that. When I select a file off a disk it does not open into
the app. instead showing the show or print file window. Anyone have any ideas?
I just got my Atari last week so I'm relatively new to all this. Any ideas or
tips appreciated. Thanks.

-Dave

You're right, of course. On this side of the atlantic, unfortunately, people (read, music store employees) can't resist a smirk when they hear "Atari".

Thanks for your help, Nick, and for such a quick response!

If your provider won't provide you with the Usenet Newsgroups you want
(and in answer to Yves first question, yes, what you refer to as "news" is
probably Usenet News), the Newzbot might be able to find a publicly
accessable Usenet server that has the groups you are interested in. Go to
http://www.jammed.com for more information.

Hello,

A number of new email clients use Olga (Infitra and MyMail). I have installed MyMail and it runs fine under Geneva 6 except for the drag and drop option. I assume this problem is related to the fact that I don't have Olga installed because I don't know how. I drag the file to the edit window and nothing happens. I have a copy of Olga but the docs are in german. Is there an english or french version or perhaps some kind soul can tell me and I assume others in equal need the information to get this combination up and running?

Thanks

Alyre Chiasson

Message-ID: <3561de24.1250432@news.tmisnet.com>
Source record: 100511

Greetings!

I'm assuming you're not using the 'Install Application'
function to copy the program from the floppy diskette
onto your hard drive. Usually, there's an INSTALL.PRG
file on the distribution diskette that does that.

Assuming the program is already installed on your hard
drive, and you wish to have the program start whenever
a data file with extension *.___ is double-clicked:

1) Do what you did, as shown in your list below.
2) Enter the data file extension in the appropriate space.
3) Press 'ok' so the change is recognized.
4) Save the desktop (it's there under 'Options')
5) Reboot your machine so the change takes effect.

Now try it. It should work ok. Double-clicking on a
Notator data file should automatically load Notator and
(as a bonus) the data file you selected.

I wish I knew what extension was used by Notator files
so I could tell you what characters to use in step 2.

Hi,
I've just bought a used Atari 1040ST with a disk drive.
Unfortunaly, there didn't came any disks with the system.
Since I would like to see how an Atari looks like, I wonder if anybody
of you could mail me a boot disk that could start the system????

I'd like to get a compressed file which I could decompress on a blank
disk. You could use dd (if you are a unix guy) or any DOS tool!

Thanks
Thomas

Try to speed up the printing process by using software like
the fredwest.prg (AUTO folder program - very good!) - you can find it
on ftp piwo.bl.pg.gda.pl/pub/atari (or still in the incoming/atari).

>Is there any way I can take the Cubase disks from the Atari and

>to something so I can print from a PC?

If you have a running copy of Cubase Score on a PC you can just
load you songs directly. If not, you will have to print pages to disk
as IMG graphic file and then convert it to another graphic format
readable by a PC (TIFF...). You can do it with GEMView (to find on
any good Atari ftp server.

Wojtek.

> Since I would like to see how an Atari looks like, I wonder if anybody
> of you could mail me a boot disk that could start the system????

Except for the very oldest STs, the OS is in ROM, so you don't need a
boot disk. I'm not sure any 1040STs were made without TOS in ROM
(someone correct me if this is wrong).

Anyway, point being, you don't need a disk. As for other software,
there's all kinds of stuff on various ftp sites and web sites. Since
the Atari uses the same format floppies as MS-DOS, you can just format
a DOS disk (make sure it's 720K, not high density) and move stuff over
to the ST.

>displayed is already fixed in the most current versions.

That explains it. I've got a english GEM/TOS and a german MagiC.

>There is a simple workaround: Keep the Alternate key presses when
>starting HDDRUTIL. On non-German versions of TOS it will then start up
>with a German GUI and there the crash doesn't occur. Except for the

Why did the application crash both in GEM/TOS and MagiC when I tried to
format the drive? The bug causing the crash you mentioned only crashed the
app when I tried to partition the drive, when I try to format it crashes all
of the time!

>instructions. Are there any English translations, or can anyone tell
>me how to correctly install it on my Falcon? Thanks!

I can't remember everything but I'll tell you a few things ...

The whole process will be easier if you understand your goal ... this is
what you will have when you've got a harddisk driver installed (not just
CBHD)

All (?) harddisk-drivers consists of these parts:
- bootsector on harddisk (the launcher)
- main driver in the root dir of your harddisk (named <drivername>.SYS)
- application program to format/initialize/partition/destroy/corrupt
your harddisk ;)

The CBHD was my first choice also after using a very old version of HuSHI.
Before that I had AHDI. Now I use HDDriver by Uwe Seimet (a member of this
newsgroup by the way) ...
I would really recommend you to use the superrior HDDriver, but if you're on
a budget you might be forced to use CBHD, so I'll try to tell you something
about it at least ...

- make sure your HD is working (either used with another driver or
formatted, partitioned, initialized) i.e. (accessable with a driver)

- If you got an earlier driver you can already access the drive, otherwise
run the CBHD.PRG off a floppy or something so that you can access the HD.

- Copy the main driver program (probably named CBHD.PRG just to confuse us
:) to your harddisk's root dir and name it CBHD.SYS.

- run the application that installs the bootsector on the HD ... I can't
remember its name but it's quite straightforward.

Eject all disks and reboot the whole darn thing ... does it work? If not ...
e-mail me or better yet the author of CBHD (can't remember his name either)
and describe your problem(s).

Remember also that if you want DOS compability with partitions over 32Mb you
need either the MagiC OS or the BigDOS AUTO program.

Hope I haven't confused you up totally ;)

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Make sure the following is set in the ini file.

pcdrive = yes ;set this to yes to make Pacifist read from the
a drive, but it won't work with protected disks. You're
also better to use imgbuild to create a .st diskfile from the floppy.
Good luck..

image=disk.st If you create a disk image - you point at it here!
mount=e:\atari mount a hard drive or directory as a hard drive in
pacifist

A lot of customised Amiga (68060, graphic card, ...) can't run old softwares (games, demos,...). So, Amiga-UAE can be a good solution to solve this problem.

For an Atari-UAE, keep in mind that emulating the Amiga graphic chipset isn't so important today thanks to retargetable graphics systems (Picasso 96 or Cybergraph'X). Yes, with RTG, you can't run old games or demos but now almost all software (games included) are RTG-compatible. Win95-UAE is a lot faster with using RTG. There is a Win95/DirectX version of Picasso96, so why not a TOS version ?

>
> >Same goes for a port of STonX to AmigaOS.
>
> I believe the Amiga already has at least one ST emulator, although I
> have no idea of how good it is.

There is one ST emulator on Amiga, but it is very old. So old that I don't know if it works well with AmigaOS 3.x and 68040/60 processors.

I have always hesitated between Amiga and Atari computers (Amiga 500 and Atari 520STE, then Amiga 1200 and Falcon030) but finally, I always chose Amiga.

I'm still looking at the Atari Universe and I would really *love* an emulator which transform my Amiga in a small equivalent of a Falcon/Hades/Milan computer.

3629. MonSTEr TAF Flea Market - update

Newsgroup: comp.sys.atari.st
Date: 1998-05-19 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3560f508.0@diana.idirect.com>
Source record: 100570

here's an update to the TAF MonSTEr Flea market to be going on July 11th in Toronto:

we have decided to not only make this a chance to sell and buy all sorts of hardware and software for our members as well as those outside the club; we have also decided to make this an event whereby you can learn just what you can still do with an Atari, including the Internet, desktop publishing, scanning OCR, and much much more! So far we have confirmed an Internet demo at the show (using the suite of available Internet clients running under STiNG); we also hope to have a Calamus demo and a music demo going on as well.

We're also hoping to have a number of dealers at the show as well, with people to be announced as they are confirmed. So far we will have a booth for the fanzine ST+ at the show.

We're in the midst of starting a promotional blitz for the show, with advertising in a number of the computer tabloids, the weekly tabloids, and of course on the USENET.

Anyway, here's the original announcement about the show :

Subj : TAF Flea Market July 11, 1998.

SATURDAY, JULY 11TH, 1998 is the date for another popular Toronto Atari Federation FLEA MARKET! The doors open to the Public at 1:00 PM and runs to 5:00 PM.

Yes, here's your chance to come to a bazaar of Atari-related software and hardware where you can shop for that peripheral or application for your ST/TT/Falcon or 8-bit that you've been looking for. Or, if there's stuff that you have no use for, get yourself a table and sell! Get rid of your old stuff or find yourself a treasure!

We're hoping to have some local dealers (and with luck some out-of-town ones) show up for this event, so we've booked a larger hall in anticipation of a good turnout. To help with the costs of the event, the following will apply.

A Half-Table costs just $5.00, Full-Table just $10.00 each. A Half-Table is FREE to TAF MEMBERS. (Dealers are expected to contribute a little more <grin>), with entry to the Flea Market at $2.00 per family (Free to TAF Members).

The Flea Market itself will run from 1:00-5:00 PM (with setup commencing after 12:00 PM and teardown at 5:00 PM).

This should allow enough time for as many people inside
and outside Toronto to show up. We'll keep you posted on
who will be showing up for this event as we make confirmations.

As usual, piracy cannot and will not be condoned at a TAF Flea
Market - anyone caught selling pirated software or stolen
hardware will be dealt with severely!

Please refer to the bottom of this document regarding getting
in touch with TAF on booking tables or finding the location
of the event - and we'll see you there!

The TORONTO ATARI FEDERATION Flea Market will be held in the
Gold Room of the North York Memorial Community Hall on the
Lower (or Concourse) Level of the North York City Centre
Library Building at 5110 Yonge Street at Parkhome Avenue.
Parking garage inside the complex next to the Novatel Hotel
Those using public transport can take the TTC's line to the
North York City Centre Station and walk through the tunnel
into the concourse, down to the food court, turn left and
find the Memorial Hall.

That's Saturday, July 11, 1998, 1-5pm for the TAF FLEA MARKET.

3630. Newsie, FTP/Website access

Newsgroup: comp.sys.atari.st
Date: 1998-05-19 00:00:00 UTC
From: marksimp.@integrityonline7.com
Message-ID: <35611232.0@205.238.18.7>
Source record: 100571

Hi,

I'm trying to set up a website using the webspace that comes with my ISP account. I'm having problems accessing the ftp server for my account though. The newsie docs are of no help, so I'm hoping to find some help here.

I've tried some of the sites that come set up within newsie, such as toads ftp site, and it seems to work fine. When I try to access my server however, it over aminute to move from connecting to server to sending request, then it just sits there, I've waited as long as ten minutes.

The newsie docs don't explain what goes in the "directory" entry of the server edit dialog. My website address will be http://www.integrityonline7.com/jam/index.htm. I've tried entering various forms of that in the directory entry line but I'm having no luck. Unfortunately, I've never used ftp prior to this, so I'm just stabbing in the dark.

Does anyone know how this is supposed to work?

Thanx,
Mark S.

<Nitpick Mode ON>

Actually, high density 3.5" floppy disks have a coating with higher magnetic coercivity (720 oersteds) than double density 3.5" floppy disks (600 oersteds). HD floppy disks actually require a stronger write current than DD floppies, exactly the opposite of what you stated.

Hi all!

I've got a great working setup with STING, it's fast and
stable... I also have a MintNet setup but it just can't compete
with sting (Where speed is concerned), I wanted to use my
sting configurations for MintNet since sting's is performing nicely.
the problem is that I don't know where I to enter them. Could someone
point out how to configure the equivalent sting parameter in MintNet?

Sting Parameter -> Equivalent in MintNet ?
==========
TCP_PORT
MSS
RCV_WND
DEF_RTT
DEF_TTL
TCP_ICMP

UDP_PORT
UDP_ICMP

Do I use ifconfig or pppconf? which parameters do I need to enter?
I've looked at the man pages but I just can't figure it out!

Thanx A bunch!
Gilles

What about using a BIG buffer. As the Falcon has got DMA sound it should be able to handle the playing in the background and then you decode while it plays. I guess this is how it normally works, but I'm talking of a HUGE buffer, atleast a few seconds. You would only get a delay at start. Maybe this doesn't matter anyway, what do I know? :-)

Anyway a MP3 player would be very nice even though there is a new standard on it's way so MP3 will probably be loong forgoten when we get a player. If the Amiga can do it, why not a fast Atari?

Hi Mark,

you set the proper login procedure to enter your own site? Logon (probably your user name) and password? Does it display a "directory window" after that? Once there, you can put files in the root (like your index.htm) and create subdirs for other stuff. As long as you won't get a directory display, you're not (properly) logged on to your own site.

3635. Several questions

Newsgroup: comp.sys.atari.st
Date: 1998-05-19 00:00:00 UTC
From: louis@holleman.demon.nl
Message-ID: <895564201.14984.0.rover.c3adfca1@news.demon.nl>
Source record: 100576

Hi,

got some different questions here this time:

1. Just installed Thing 1.26 (we had a whining-fast translation of the resources here into Dutch!!!), but: background color of windows is no longer selectable??? I set these all with 1.20, but now the option to set the BG color doesn't work any longer...

2. Anyone know where to get the latest version for Aniplayer? I've seen a link somewhere some time ago, but I can't find the message anymore...

3. Anyone knows about a decent RAR/UNRAR port for the Atari? I've got this very early version, that won't work with new RAR files at all, so everytime I gotta go into SoftPC and use a PC-version that will...

4. After all my problems with Newsie in the beginning, I must say it runs perfectly ever since I "solved the problem". There's two things that are still a problem: first is, whenever I do FTP *to* my own site, I'm limited to one file at a time. After that it hangs. Just once I got the directory retrieved after the file was sent, but all other times it just hangs after the file's been sent. Getting files is no problem at all. Second problem is when I'm receiving news (for reading offline) every somany messages the transfer simply stops for 20 or 30 seconds, then goes on for another somany and this keeps on going during the fetching of articles. This might be a matter of setting proper MTU/MSS values (? ... heck, just guessing here...) but OTOH all my transfers in CAB, FTP or receiving binaries in the Newsgroups go pretty OK. I recall having read earlier about these problems from others... What's up here?

There is one here (between "TX16W" and "Yamaha...").

>>MAILFOLD.INF is looking in the "Reply-To:", "Sender:", or "From:"
>>areas of the header, so this is probably why your own mail is being
>>redirected.
>
>This is the part I don't quite understand (yes, I've read the docs)

If you have, you haven't understood. This is what the documentation
says:

Mail messages - notably those from so-called "mail discussion
groups" - can be grouped together in sub-mailgroups, or mailfolds.
Selection is only possible on the "Reply-To:", "Sender:", and
"From:" fields in the header (in that order: evaluated from left
to right).

I repeat: selection is on the "Reply-To:", "Sender:", and "From:"
fields in the header of the messages, and they are "evaluated from
left to right", i.e. first the "Reply-To:" field, then the "Sender:"
field if a match isn't found in the first, etc.

Atari is dead, but the userbase and the computers are still there. The
atari community supports itself with the help of some companies that do
their best to provde high quality software and hardware.

I have the feeling that BBSes are more or less a thing of the past, at
least here in Europe. The internet has replaced them. This newsgroup is
probably the best place to find support, and FTP sites have most of the
software you'll need.

Cheers,
Nick

I returned my HDRiver disk to System Solutions in September 1997 for an upgrade, and it returned with a new manual and version 7.02 on the disk. So now I have to pay -another- upgrade fee after 8 months?

Actually, I don't mind paying a fee as long as a) Uwe gets his fair share: b) I can buy a two-machine licence, not more than one in use at a time. I used to pass files between my Falcon and the Stacey via Littlenet (using AHDI on the Stacey), but it's much quicker using Zip disks- hence my experiments with HDDriver.

Nothing particularly smart. Everything which changes is in WORK, MAIL or OFFLINE folders. OFFLINE consists entirely of folders, one per newsgroup- since these hold only stuff I haven't finished with, I archive the whole of OFFLINE. MAIL and WORK contain files, so I display in date order and archive all the files, together at the top of the list, with the current date on. I run OFFLINE in a 4MByte RAMdisk, so copy the new files from MAIL and WORK to the RAMdisk and then STZIP the lot to one file on a Zip disk with a filename consisting of the current date. Keep old files for as long as you like- I usually keep about a month.

All mail, in and out, is kept in MAIL until you delete it, but posts are held (in WORK) only until you send them, so I usually backup immediately before connecting Newsie on-line so as to have reference copies of posts.

Best option (arguably) at the moment is STiNG with CAB (for web) and
NEWSIE (for email/news). Check out the Quick FAQ (see my .sig) that now
includes a "how to" to get on the net with those packages.

Printer port is parallel, but stay away from those "optimized for
Windows 95 only" printers. You'll also need the appropriate drivers for
whatever printer/software combination you plan on using.

Cheers,
Nick

3646. HELP! printing score with Cubase Audio

Newsgroup: comp.sys.atari.st
Date: 1998-05-19 00:00:00 UTC
From: dainie@my-dejanews.com
Message-ID: <6js0et$5om$1@nnrp1.dejanews.com>
Source record: 100587

Hi,

This may be the wrong group for such a question. If so please let me know.

I am currently printing scores using Cubase Audio, with an Atari 1040 STE that's hooked up to the world's slowest printer, a Canon BJ-5.

It's taking ab-so-lute-ly forever.

I have tried hooking it up to a Canon BJ-210.ex but none of the printer drivers seem to work.

Is there any way I can take the Cubase disks from the Atari and convert them to something so I can print from a PC? Or, does anyone know how to get the faster printer to work?

I am working with a VERY eccentric composer who even has a spare Atari in his closet for when this one finally bites the dust or is run over by my car. I'm sure there are some of you in thes group who understand him perfectly!

Any helpful comments would be more than welcome.

D.D.

Well, I was trolling through the Amiga newsgroups looking for more info on Gateway's new Amiga announcements (a new Amiga next year that has 5-10 times the price/performance ratio of a Pentium II), when I found an announcement from Bob Luneski. It seems that the end has come for Oregon Research and they are going out of business for good. Message goes into more detail and explains in more detail as well as offering a final closeout sale. Sad to see them go, even though they left the Atari market last year.

> So, a stock 1040ST. What do I need to get it on a network?

The printer port is parallel.

The modem port on the stock ST is limited to a DTE of 19,200 so, for
practical purposes, your best DCE connection will be at 14k4. However,
there is a fairly simple mod. which can be made to the ST which will
increase the DTE to 38k4.

For networking with PPP you can do it all with PD software:

HSMODEM v7 - to clean up the serial port interfaces.
STiNG/Dialer v1.15 - to provide TCP/IP with SLIP or PPP
Newsie v0.88 for e-mail, news, ftp.
CAB v2.0 (demo version) for web browsing
CAB.OVL v1.2904 - to interface the net to the browser.

> that's hooked up to the world's slowest printer, a Canon BJ-5.

Naaaah! The world's slowest printer is my Citizen 120D.

Seriously, have you tried a print spooler ? This things set up a memory
buffer where the printing data goes while it is being sent to the
printer, thus freeing up things for you to keep on working.

Go to http://www.umich.edu/~archive/atari/Printing/ and look in the
0index file.

You might want to try gsp33uk.zip, fpprnt.lzh, m_spool.zip, spool11.arc.
I haven't tried any of these

>
> It's taking ab-so-lute-ly forever.

Nothing's excentric about using the best hardware for a specific job,
and considering the price of Atari hardware there's nothing wrong with
having several of them as spares ;-)

Cheers,
Nick

> just that easy! <heavy sarcasm? your soaking in it!>

There's more to it than just porting MiNT since it needs a lot of the
TOS (Gemdos, Bios and Xbios) calls to be there. You would have to
implement all of those as well. Then you need a VDI in order to make
XaAES or oAESis work. How is Fenix and fVDI going, btw?

Message-ID: <6jucf5$v8l$1@nnrp1.dejanews.com>
Source record: 100394

Hallo everyone!!.
I'm trying to control the parameters of my Korg Wavestation EX, using a mixermap in my Cubase-program. (I'm using Cubase Score on an Atari 1040 STE). It's no problem to assign a fader to the volume control, the modulationwheel e.t.c., but when it comes to parameters (in the effect-sektion for example) something goes wrong. I'm not experienced with the use of sysex, and have the feeling that the problem has something to do with ASCII (the numbers of the parameters of the Wavestation are in ASCII - and I have problems with translating these numbers to sysex-numbers). When I use the "Learn-buttom" in the mixer-map window, I get a string like this:
F0,42,30,28,41,2E,02,2B,31,32,XX,F7. 41=parameterchanges, 2E,02,2B is the type of parameter to change (I think), and if I try to place XX (variables)after that, I don't get changes moving my wheel (if I'm lucky, I get two or tree changes - but nothing continuous and usable). However it's no problem to record parameter-changes to a rack (not using the mixermap) - so the "sysex-dialog" between Cubase and the Wavestation should be OK... Can someone help me on my way, please (for example: how to convert ASCII-number 126 into HEX-decimals??!!...)

Help!

I've just set up my 8 year old with an old mega 2, colour monitor and a panasonic 9 pin printer (px 180) and have been unable to get nvdi of any version to print well. About a half page will print before a system crash. Last night I installed Speedo 5 and used the star nx 1000 driver and voila! Prints no problem.

Could someone provide an NVDI driver for this printer? Or provide me with the esc. codes needed to change the epson fx80?

Thanks in advance!

Willard VanderPloeg

fVDI is going much better than both XaAES and oAESis together and is already
about as fast and even faster than NVDI in mono modes.

Regarding GEMDOS you can download the sources on the net. If someone did those
parts we would be able to port TOS to whatever platform we liked. Rather cool
idea actually.

Check out the Quick FAQ, it's all listed in there...

> I have a 1040 stf with 4 meg ram. Are any hardware upgrades required?
> Thanks,

The STF serial port is limited to 19200bps, so you won't get any better
than a 14400bps connection, unless you upgrade the serial port with a
hardware modification. A description of this can be found on most FTP
sites.

If you'll be seriously using the web then I suggest getting a hard drive
as HD caching will speed things up. You also need a monochrome monitor
as colour resolutions will be useless.

I wouldn't say that an ST is the best machine for web browsing as this
is very graphic intensive. There is also no Java. For occasional
purposes, it works. Now, if you want to use newsgroups, FTP, IRC, email,
that's another story...

Cheers,
Nick

Charles Silver (csilver@Puke.On.Spammers.com) scribbled:
:
: Well, you might try changing mint.prg to mintnm.prg. This turns OFF memory
: protection as well as virtual memory on MiNT versions 1.14.x and greater.

Virtual memory ? Really ? Cool ! I now have FreeMint 1.12. Could you summarize
the advantages of 1.14 for me, please. Since I have a Falcon030, VM would be
really nice.

Thanks anyway,

>Well, you might try changing mint.prg to mintnm.prg.

On releases prior to MiNT 1.14, MINTNP should be used instead.
KGMD comes with 1.12.6, so you should use MINTNP.

>At this point I don't recommend using MiNT1.15.2b (beta).
>It's very stable, but I can't get long file names to work
>with a RAM disk, but that's another story.
>Of course, I'm not a mintnetter...

Which ramdisk? Older ramdisks won't EVER work with long filenames,
because they do not have the full FAT table, hence do not have the
spare area where long names are usually mapped.

On MiNT, you should use ramfs.xfs which is automatically loaded from
C:\multitos\ at bootup. Look up for ramfs_151.tgz on ftp.funet.fi.

>Yes, you are.

I think I'm missing something obvious in my OEXPIRE.INF file. This is
what I have:

```
# Groups to be emptied completely
junk|control days=0 udays=0 msgs=0

# Groups to be kept forever
Mail\..*\.archive|Outbound\.archive\..*
Mail\.rosco
Mail\.rosco\.ruth

# Mailfolds are treated as normal newsgroups
Mail\.rosco\.emusic days=7 udays=7 msgs=100
Mail\..*\..* days=7 udays=7 msgs=100

# Read mail is to be kept 3 days, then sent to archive.
# Unread mail is to be kept forever (until read).
Mail\..* days=7 udays=-2

# default:
.* days=7 udays=7 msgs=100
```

Mail\rosco\emusic is not being deleted. Everything else is being
deleted as specified.

Any solutions?

You could buy gemulator and the rom card and pug in the apple roms
from the spectre cart. That is probably as close as you can get to it.

And what's the point in buying one of those expensive things, when you
already have 3 STs lying in a shed ? And you can buy an STE nowadays for
next to nothing, really.

Cheers,
Nick

> the same but we lack those MFLOPS.

Yeah, but with a little fiddling, it can be made to only use fix
points. But that usually gives less quality than with floating points
all through.

> What about only decoding every second frame then? :-)

BAD idea with MP3. The frames are very dependent of each other in MP3
streams. Sometimes, decoding of one frame might even use the actual
data from the previous frame directly. All to be able to use a few
bytes extra where the frame before didn't need it. Quite
complicated. :) Even mp2 was in some extent depending on the result of
the previous frame.

> BTW. Are you being lazy now? There a a few days left to NAS98 so go and
> do your coding! :-)

I probably won't be at NAS98. I get back home on the saturday, or
maybe not even until the sunday. Have exams here until the 12th.

But, to actually answer your question, yes I'm being lazy too. :)
Another reason why I'm not putting more effort in an MP3 player, is
that I, myself, wouldn't use it very much. Others want it far more
than I do, but most of them are lazy like me, or claim they don't know
the DSP well enough. Learn, I say, learn! :)

Greetings,

Tomas - tomas[@.]nocrew.org

Hi all!

This is a message to let you all know that I have recently completed
the "ST News Official Lamentation" home pages, a site where you can
find all you ever wanted to know about the Atari ST/TT/Falcon disk
magazine "ST News" (1986-1996) but were perhaps afraid to ask :-)
Apart from information on a variety of topics and over 150
interesting links to weird and wonderful (and sometimes plain useful)
sites, it also includes a download area where every single issue of
"ST News" can be downloaded.
The site is located at http://www.scriba.org/stnews. Pay us a visit!

Davs Peter,

>"sysex-dialog" between Cubase and the Wavestation should be OK... Can
someone
>help me on my way, please (for example: how to convert ASCII-number 126
into
>HEX-decimals??!!...)

I don't know much about Sysex (even though I've been a musician and technician for forever...), but if you want to convert from decimal to hex between 0 and 255 (which is what you will use as values in your Sysex messages), you start by dividing the ASCII-number by 16 (since hex has the base 16): 126/16=7.875.
7 is the first Hex digit. The decimals should then be multiplied with 16: 0.875*16=14 and violï¿½ - you've got your second Hex digit - A is 10, B is 11 etc, which means the full Hex number in your case would be 7E.
It works the same way the other way around: 7 is multiplied with 16 and the add 14 (E): 7*16+14=126.
I hope it helps a little on the way.

Hi,

>This may be the wrong group for such a question. If so please let me know.

Your question is Atari related, so this is absolutely the right group!

>I am currently printing scores using Cubase Audio, with an Atari 1040 STE
>that's hooked up to the world's slowest printer, a Canon BJ-5.
>It's taking ab-so-lute-ly forever.

Do you really use Cubase Audio? Then you have a Yamaha CBX-D5 to record the audio on?
Well - anyway, Cubase is just about the slowest program available when it comes to printouts - on any printer except for the SLM804/605 laser printers which are connected to the DMA port. The SLM printers start printing almost immediately so try to get your hands on a used one. For Falcon users there is unfortunately no solution - we're stuck with the terribly slow printouts. I started complaining about it to Steinberg a couple of years ago and suggested that they should make Cubase compatible with GDOS and NVDI, but I never recieved an answer :(
Using a printer spooler program does speed it up from more than forever to just below, but it's terrible anyway.

>I am working with a VERY eccentric composer who even has a spare Atari in his
>closet for when this one finally bites the dust or is run over by my car. I'm
>sure there are some of you in thes group who understand him perfectly!

Definitely - I've often thought about getting a spare Falcon just in case. It just wouldn't feel right to start using the PC for music...

Greetings!

Getting ready to move and need to start clearing out my unused items. I've never managed to get around to finding software and stuff for this so much as I hate to say it, time to say bye-bye!

Atari 520STFM in perfect shape cosmeticaly and functionaly. With manual and an Atari CX77 Touch Tablet (which came with it and seems to work though I'm not sure it's intended for an ST). Sorry, no mouse, software, etc.. Does have a TV adaper box and cable.

I've been trying to follow the newsgroup for an idea on price but haven't really seen much so I guess I'll just let it go to the best reasonable offer.

Thanks and please reply by email not in the newsgroup,

Hi, I have a copy of CD Recorder 2.0 that uses the original disk for copy protection. You can run the program, updates, etc. from the hard drive but the program needs the original Soundpool disk in the floppy drive of my 030 in order to run. Needless to say, if this program disk ever becomes corrupted I'm outta luck for a few weeks until Soundpool provides me with a new one upon return of the old (now bad) disk. How can I make a backup FOR MY OWN USE, NOT TO PIRATE, in order to protect myself? Thanks!

3684. MINT 1.15.B2/CAB2.50 problems

Newsgroup: comp.sys.atari.st
Date: 1998-05-20 00:00:00 UTC
From: tos4ever@ping.be
Message-ID: <35635908fb92b0@ping.be>
Source record: 100425

Hello,

Since a few days I'm using MiNT 1.15.b2. I've configurated my setup so
that the partition where I put the downloads is a NEWFATFS. No cache
or writeback.
The cache folder of Cab is also situated at this partition.
Now I've noticed that when I'm online with Cab something is accessing
my harddisk (10 sec.) and so blocks the working of Cab.

The console says this:

Pid 81 (CAB): fatfs.c: remove open FILEPTR fail in : fatfs_close ((null))
or
Pid 81 (CAB): fatfs.c: remove open FILEPTR fail in : fatfs_close
(\wwwcache\w\00001e26.htm)

What is going on here?

I should've mentioned in my original message that I live in Salt Lake City, Utah. (Incidentally, I'll be traveling by road to Seattle in a few weeks, so if you live between SLC and there I can probably personally deliver it.)

Jim,

> Anyone have one any size harddrive for sale with appropriate setup
> software at a reasonable price please advise by return e-mail please and
> thank you.

I have an Atari MegaFile 60 Hard Drive system with a bad 60mb drive mechanism. All other components of the system are intact and perfect. The system can be refurbished and made operable by merely replacing the 60mb RLL mechanism with a new one. Atari use the Seagate ST277R hard drive mechanism in the MegaFile 60, and I see that a company (AA Computech Inc -- http//www.scvnet.com/-bobs) is advertising that mechanism in Computer Shopper for $99.

If you'd like to do the repair yourself, I can sell you the MegaFile 60 system (AS IS), including all necessary cables and software, for $25 plus shipping. I can also do the refurbishing, if desired, but the service labor will probably drive up the cost of the system to the point where it is not feasible in todays market (allow 2 hours of service labor for the repair and setting up the new drive so its plug-and-play ready).

If interested, let me know.

Sheldon

3689. Page "GEM games for graphic cards" UPDATED

Newsgroup: comp.sys.atari.st
Date: 1998-05-20 00:00:00 UTC
From: dipching@ping.be
Message-ID: <356348ea2c5b481@ping.be>
Source record: 100430

My page about GEM games graphic cards compatible has been updated ...
You can find there about 54 games purely GEM compatible or graphic
card compatible ... just try them now !

http://ping4.ping.be/dipching-drulkhor/VGA-GAME.HTM

If you are aware of any other graphic card compatible games, don't
hesitate to contact me and/or send them to me ... so I will put them
on the belgian ftp server.

Thank you.

What's new on this page ?
All the links to the belgian ftp server are now efficient, they have
been edited right now ... it works ... I have just tried it right now
... with ... with ... with ... Netscape 4 ? NO ... with Internet
Exploder 8 ? NO ... with WenSuite III (the come back) ? No ... simply
with CAB 2.06 ...
Bye

Jo

Yes it is common. Very pedantic persons could say that only the "big 8"
(top level hierarchies like rec.*, comp*, soc.* etc.) are belonging to
the Usenet but better ignore them :-)

If you donï¿½t get de.* or maus.* newsgroups at all then better change
your newsserver. Try news.uni-freiburg.de for example.

Put OLGA.APP and OLGA.INF in a path like C:\OLGA\. Update the OLGA.INF file to match the paths of your applications. For instance mine looks like this:

<snipped>
[Applications]
CAB=J:\CREATE\CAB.APP
QED=J:\CREATE\QED.APP

Now update your GEM.CNF file and add the following line:

setenv OLGAMANAGER=C:\OLGA\OLGA.APP

QED and CAB are the only applications I use that are OLGA-compliant. Are you sure Infitra and MyMail support OLGA, though? That's great if they do, but I don't remember OLGA being mentioned with earlier versions of Infitra and MyMail, both of which I've tried.

Another thing you'll want to do, although not related to OLGA, is configure Geneva's GEM.CNF with:

setenv AVSERVER=NEODESK

Along with this, configure NeoDesk by selecting 'Use NeoDesk for AV Server'. This creates a neat desktop environment when applications tie into it.

3692. Amiga OS on Atari? GEM on Amiga?

Newsgroup: comp.sys.atari.st
Date: 1998-05-20 00:00:00 UTC
From: look@my.sig
Message-ID: <35623772.14013252@news.wavetech.net>
Source record: 100527

Hmmm, regarding this Amiga/Atari work together, exchanging OS's blah blah blah... I just came across something called "AROS", which is an effort to re-write the Amiga OS (Kickstart? wha? :) and even make it portable to other platforms... Anyway, they claim %50 functionality or somesuch, and source is available. So who's wants to do the Atari port? Why, I don't know... :) But if anything it would be a Really Neat Hack... Take a look at http://aros.fh-konstanz.de/~digulla/index.html

While I'm at it, whatever happened to those free AES replacements, oAESis and xaAES or somesuch... (StuDly CapS, eH? :) No one seems to be talking about them anymore, did these die off?

If for nothing else but hack value you wanted GEM on an Amiga, I would think porting MiNT to the Maiga (hey, neat typo, for some strange reason I'm compelled to leave it there...) wouldn't be that* hard... (famous last words? :) Then you could plop xaaes on it and poof! GEM on an Amiga... Its just that easy! <heavy sarcasm? your soaking in it!>

3693. Bill Gates' False Analogy - Coke as Microsoft

Newsgroup: comp.sys.atari.st
Date: 1998-05-20 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <35625062.0@diana.idirect.com>
Source record: 100528

Just for fun, let's start a round robin....

you may have heard about Bill Gates' reaction to the lawsuit lauched by the US Justice Department and the 20 States regarding anti-trust action against Microsoft. When told that one of the conditions of dropping the suit was to remove Internet Explorer from within Windows '98 and include Netscape and another browser to the package so the consumer would have a choice, Gates angrily said "that'd be like Coke being required to add three cans of Pepsi to their six-packs".

well, I've thought about Bill's rather weird analogy, and these are some of the reasons I feel they don't wash:

1) no company has ever forced their employees to drink Coke and only Coke while at work

2) If Coke bailed out Vernors with a cash loan, they wouldn't require Vernors to put only Coke in all their future bottled and canned product as part of the deal. (a)

3) Coke would never feel threatened enough by Pepsi to want to use tactics like giving away all cans of Coke for free (and if they do, where's the line?)

4) Coke would never put out a product as bad as Microsoft "Bob" (hey, even New Coke wasn't THAT bad......)

5) Coke's help lines wouldn't charge by the minute as you explain to them you found a dead mouse (or even a live mouse) in a bottle of their product.

6) Coke doesn't make the requirement for satisfaction of their product be based on their customers' speed and onboard memory.

7) Coke doesn't put chemicals in their product that cause those who then drink a Pepsi to have a case of the green-apple quick-step.

8) Microsoft, no matter how hard they try, will never, ever make a product as cool as Cherry Coke.

any more? don't be afraid to jump in......

a) for those in Europe and other Vernors-free zones, a soda made by a small company in Michigan that is a rather interesting cross between ginger beer and cream soda; it can also clear your sinuses in seconds flat.

Daniel-
Just had this same discussion with a colleague. Gates had the right ideas but old mad 'Greed' seems to have taken its toll on him. Kinda like the analogy of Rockefeller at the turn of the century with Standard Oil dominating the oil industry using cut-throat tactics and Gates behind the scenes 'gotta get those guys', stop the competition at all costs attitude in the OS/software industry.
Gates flagrant belligerent notion of simply comparing Coke to Windows in the hope that everyone will 'buy it' oversimplifies a rather complex issue of monopolistic practices.
Power corrupts especially those overcome by greed.

I have no problem with them including Internet Destroyer on the Loss98 CD,
(this goes for 95 OSR2 and newer too...) I do* have a problem with the fact
that it silently installed WHETHER YOU LIKE IT OR NOT!! And you can't even
(easily, at least...) uninstall it afterwards! This is like, ummm... going
to buy breakfast cereal, and only being able to find the kind with the
cheap toys inside. And after you've eaten the cereal, you're not allowed to
throw the toy away! Your stuck with it! Whether you use it or not, its
still worthless trash taking up space for no reason!

Personally, I'm sticking with my original release Win95 floppy version for
as long as possible. Its less than half the size of that evil OSR2, and has
almost no ms-crap-I-don't-want-but-can't-remove-so-its-sitting-there-
eating-disk-space...

There is nothing in that OSR2 that can't either be easily added to
'original'/OSR1 or is just crap you really don't need... Actually, USB
support is the only possible reason I can see to use OSR2. And even then
OSR2 has to be patched to OSR2.1, and MS has even said that the upcoming
(is it?) OSR2.5 is still going to need a seperate patch for USB...

Start->Settings->Control Panel->Posting->Ranting->Stop Rant

ahhh, I feel better now...

Howdy Eric,

Ok, I can do that. First, I must say that Peter's FAQ's are very good, so they do the job. One of the problems I'm seeing is that some ISP's give their Atari clients the wrong info or point them in the wrong direction for a fix. If you don't have much experience, this can cause you to run in circles. This is one of the reasons I voluteered to help those in the USA. I just found it easier to "do it" than try to explain everything.

For example, a fellow was refered to me from a club member, and I spent several hours over the phone trying to explain the setup in detail. He then would call me back when it didn't work. Several phone calls later, he finally got it working, but he was getting *very* slow downloads with CAB. He had used Atari computers for some time and wanted to do it himself, which is fine. I understand that very well. Finally, he gave me his ISP info and I setup the files and had STinG/CAB working with good download speeds. It took me about 15min. I think you see my point.

Also, I think I need to get more experience with some of the major USA ISP's. I would like to connect to MCI.Net, ATT.com, SPRINT.com and MSN.com (ugh).

With CAB, you can't even download MSN.com's WebSite because they use FutureSplash Animator. I have a friend with PC who has an account with'em, so next week I'm going to take my Falcon to her house and see if I can get STinG to connect using her account info. That, should_be_interesting.

One problem I will have in trying to write a FAQ is that I ramble on and on. Ahhh, I think this followup post shows that ;) Also, one of my "tricks" might be considered a hack by the ISP, so I'd need to run that by someone to see if it's legit. I think it's harmless, but I'll check it out.

CU,

Charles

From the looks of it I'd be suprised if it worked on anything but the original 68000 model line... (whatever that was... :) I tried messing with this on the school's video toaster box, didn't work, just got a white screen... It was an A2000, I'm not sure, but I think it was accelerated, for one thing Lightwave certainly seemed to render faster than the A4000/Toaster 4000 box I messed with at the local public access cable station. And I noticed a G-Force manual laying about... :) Actually, I think some system information thingy I found in there said something about it having an '030. What do A2000s normally have? :)

All I know (about Amigas) I learned from Video Toaster... <heh>

>

A bit late with this, I know, but I'm just catching up on some old threads.

I would wholeheartedly recommend Freedom to anyone (with enough memory, and preferably multitasking), although I have to confess that I still use version 1.x as I felt the upgrade fee for 2.x was waaay too much for what is basically the addition of a control panel.

Nevertheless, in my AES4.1 system I found it to be an enabling program that allowed me to work more efficiently than ever before. If I want to load that file that I can see sitting in a Thing window, I just drop it onto Freedom. Searching for files, no problem - I can even do severa searches smultaneously. After setting up the default paths and files, navigation to the most important parts of my hard drive have never been easier - so much so that I often just open another fileselector and do all my file copying and moving using just Freedom.

Which is especially handy when you're short of memory, and want to kill the desktop.

Also, I find that a common operation is "down one directory level and up into a sibling of the current one" - with Freedom this is incredibly easy. As is going back, say, four, six or eight directory levels in a single click.

Not to mention the ability to "cut" a long filename them "paste" it into Everest - saves on typos when putting in those long_filenamed.html files.

Oh, and the flexible masks, and filename and path histories, etc. etc.

Basically what I'm saying is that Freedom makes it desperately easy to find and open files, whether they're in a well used directory, in a less frequented place, or just in another application's window (i.e. Thing) - which to me is what a fileselector is all about. Let's face it, it's an important part of the OS, but one which you generally want to spend as little time in as possible, as every extra second in the FS is one less second to actually work

on the file.

MyMAIL are using AV-Server or MultiTOS for the drag'n'drop
OLGA is not used for the drag'n'drop it is used for object linking.
I have not tested the program under geneva but i think
you need a av-server and/or do some settings for the av-server.

> tips appreciated. Thanks.
>

That desktop option does not "install" the application as understood
with Windows, it just tells the desktop that when you double click on
notator files (.SON I think) it should launch notator.prg instead of
showing the default "View/Print/Cancel" box.

So what you should do, is select your notator.prg file, choose install
application, select gem and type SON (or whatever it is notator uses,
not PRG anyway!) as the file type, then OK, then save desktop. Some
applications don't handle this anyway, so the normal method is to open
the application and then open the file.

Other that that, you don't "install" apps on the Atari like you would on
a PC. All you need to do is put the application and all the files that
go with it in a folder on your hard drive. If you're running from a
floppy, there's nothing to do.

Cheers,
Nick

Sure, but on the Falcon you have also got a DSP which should speed things up.
Maybe it's possible to rewrite the Aniga version into DSP assembler. :-)

> it, but someone else with a lot more energy might. :)

Interresting. The main part of this decoder was written in C as well so
maybe there is room for some improvments. The TMS320C3X is also a Floating
point DSP. With a accelerated Falcon with a 50MHz DSP the MIPS are about
the same but we lack those MFLOPS.

What about only decoding every second frame then? :-)

BTW. Are you being lazy now? There a a few days left to NAS98 so go and
do your coding! :-)

> disk. You could use dd (if you are a unix guy) or any DOS tool!

Unless your ST is a VERY OLD machine, it should have TOS in ROM,
therefore you don't need a boot disk. Just boot it up with a blank
formatted DD 720K disk in the drive. If you haven't got a formatted disk
then switch on and wait a few minutes for the desktop to come up.

If the disk doesn't come up, then you'll want to consider getting a set
of ROMs, which you can cannibalize from a dead machine.

It sounds like you're new to Atari ST computers, so I suggest you have a
look at the Quick FAQ, see below.

Cheers,
Nick

All information about everything you always wanted to know about
Okami is in the ST-GUIDE hypertext file, except for very specific
information pertaining to the set-up of configuration files: *that*
information is in the configuration files themselves. So, waht you do
is: You install the hypertext files "okami.hyp" and "okami.ref", while
in Okami you press "Help", which gives you the opening page of the
Okami help file, next click on the little icon that says "A-Z" for the
index, go to the letter "M" (it's halfway down the alphabet), click on
"Mailfold" (it's there because it starts with an "M"), and simsalabim!
you are presented with the above text. (ST-GUIDE help files are
written to make it easy on the user.)

>(argh!).
>
>
>Any ideas how I can solve this? Am I missing something obvious?

Yes, you are. The first line of any quote format sequence is the name
of the newsgroup you are posting the message in. Since mail groups -
and hence mail folds - are pseudo-newsgroups, you should put the name
of the *newsgroup* there. So, if you have a mailfold name "yamaha",
you will have a pseudo-newsgroup "Mail.hall.yamaha". *That* is the
name of the newsgroup which should be on the first line of the
quote format sequence.

For any mail group, moreover, you can specify an email address (with
wildcards) to further narrow the scope of the quote format. The email
addresses are separated from the newsgroup name by a "|". If, for
instance, you want to start all your emails to Norwegian addresses
with a Norwegian greeting (all Norwegian addresses end in .no), you
put the following in your quotefmt.inf:

```
Mail.hall|*.no
Norwegian greeting
\end
```

If a full email address is used (without wildcards), then the Norwegian
greeting only goes to that address, of course (so you can use
something special for your mother, or your girlfriend).

Etc., etc. Remember that the order of the quote format sequences is
important. The search is stopped at the first match found, so always
put the most specific first and the most general last.

From the excerpt of your quotefmt.inf file I gather that you want to
use one single format for all mailfolds (they're all the same). But
that is simple. Just put

```
Mail.hall.*
on %d, %r (%a) wrote:\n
\end
```

and you're all set.

Your ISP choses which groups it carries, there is no point in your ISP
downloading and storing tens of megabytes of news everyday that it
doesn't think anyone will read. Ask newsmaster@imag.fr to add the
groups you want.

There was some discussion about this recently here(?) and in a German Maus newsgroup - it appears that MagiC (4 & 5) contains /some/ of the functions of WDialog, but does /not/ have the printing dialog functions built in, for instance, so you still need it! Apparently WDialog recognises if any of its functions are already available, and only installs those that are not (it depends on the versions of both MagiC and WDialog).

h> Regarding "Selectric" -I've never had any problems at all with it,
h> and registered it a long time ago. I don't know if it's still
h> supported, but I hope so as this is a file-selector replacement I

It isn't supported any longer :-(I like it too, and use it a lot but I
/have/ had problems with it 'sticking' in a nested sub-directory when
changing drives. With CixRead this (?), on some occasions, results in
the remaining messages being written to the wrong folder after those
marked for deletion have been deleted on leaving a topic. At least I've
had no problems like that when I disabled Selectric for Comms.

One snag with Freedom 2, according to Uwe or Peter R(?) is that it makes
some illegal calls to the OS, if I understand him right - or accesses
things it should not really meddle with - that's why it's called a
Schweineprogramm (pig of a program) by posters in some of the
German Maus groups.

Hi there. I have the following atari hardware & software for sale:-

Atari 520STFM with 1MB RAM
& Autoswitch overscan board 35UKP O.N.O.
& Original Discovery Pack Software & Manuals
(STOS BASIC, First Basic, Outrun, Carrier Command,
Bombjack, also 2 boxes of miscellaneous disks & games)

14Inch VGA Monitor 20UKP O.N.O.

Star LC20 Dotmatrix Printer 20UKP O.N.O.

Alpha Data Hand Held B&W Scanner 25UKP O.N.O.
+ Touchup Software

Software:-

Protext V6.5 (full package with manuals) 8UKP
TCB Sound Tracker 5UKP
Master Sound II Software & Cartridge 6UKP

Games:-
Frontier:- Elite II
F29 Retaliator
The Hollywood Collection (Batman The Movie,
Indiana Jones & Last crusade, Robocop,
Ghostbusters II)
Flood
Populous
3d Construction Kit.
Sapiens
Epic
Robocop III (the 3d game)
Plus many others. All games 5UKP each.

Magazines:-

80+ STFORMAT & Atari ST USER 15UKP the Lot

All prices in UKP.

Sorry- the point I was trying to make was that you referred to v.7.10
and 7.11 as 'old', and 'fixed some time ago'. I was wondering whether
this was longer ago than September 1997 when I was sold v.7.02. I
do expect to pay for new features.

Any comments on my suggestion for a two-machine (one at a time)
licence?

Why do you keep your own mailbox forever? Mail is sent to an archive
group after expiration, not deleted. In fact you have this set in a
line further down (Mail\..* days=7 udays=-2).

>Mail\.rosco\.ruth
>
>## Mailfolds are treated as normal newsgroups

>## default:
>.* days=7 udays=7 msgs=100
>
>Mail\rosco\emusic is not being deleted. Everything else is being
>deleted as specified.

I don't know why Mail.rosco.emusic is not being deleted, but I know
the line is superfluous, because it is already covered by the next
line: `Mail\..*\..* days=7 udays=7 msgs=100', which of course
includes *all* mailfolds (i.e. groups of the form
`Mail.something.something'.

Oops! My mistake. I forgot that all mail groups are special in this
respect. No, what you have to do is:

Mail.hall|email-address-of-mailgroup

for each mailfold.

Hi Peter,

all I can add is: I'm running MagiC 5.01 (not the latest, but I'm now waiting for v. 6.xx in English...). When I tried to run the Jinnee desktop, it complained about something going wrong in the AES and bombed out. After installing the latest version of Wdialog (then around v. 1.97 I believe) it went OK. Note that the Jinnee docs said: If you don't use MagiC, install Wdialog; if you do run from MagiC, Wdialog is not needed :-)

And once again, I checked with Wilfried Behne about it, and all he said was "Eeeeeeeeeerrrrrrrrrmmmmmm................."

3719. motorola math coprocessor in an atari 1040 stf?

Newsgroup: comp.sys.atari.st
Date: 1998-05-21 00:00:00 UTC
From: stephen.harris@acm.org
Message-ID: <6k1cud$5ur$1@nnrp1.dejanews.com>
Source record: 100443

Hi all,

I just pulled a M68881 out of a dead Mac; can I use it in my Atari 1040STF? I'd rather not take it apart just to discover that I can't use it, so I ask here first.

Thanks in advance,
-Steve Harris

yes you can ive seen a instruction text file *somewhere*

if no one has this to hand, mail me and i will have a look on my disks

> I'd rather not take it apart just to discover that I can't use it, so I ask
> here first.

There's no socket or circuitry in the 1040STF to accept the FPU. Installation would involve some serious modifications to the mother board. Before undertaking major system modifications, you might first consider if you have any software that can even take advantage of the FPU. Of the few applications that do, most would not even be feasible to run on a 1mb 1040 system anyway.

Of course, if you're just looking for bragging rights -- to be able to say you did it, go for it. There were quite a few folks back in Atari's old 8-bit days who upgraded their 8-bit systems to 1mb of RAM. Other than bragging rights, and being able to configure a boo-koodle of RAM disks, there really wasn't much in the way of software that it was really useful for.

Of course, since most of us Atarians consider our systems as much as a hobby as a useful tool, bragging rights and being able to say we did something most people would say was impossible is enough of a reason. ;-)

NeoDesk combined with the NeoDesk CLI can launch any TOS or GEM-based
program reliably, with any version of TOS. It's all in the way the CLI
tells NeoDesk to run the program, rather than running it itself.

>me with a new one upon return of the old (now bad) disk. How can I make a
>backup FOR MY OWN USE, NOT TO PIRATE, in order to protect myself? Thanks!

You can't copy it. I've tried copying it for the same reason you want to,
but no program I've tried so far has been able to copy it. Not even on Amiga
or PC. However, I've been using CDRecorder 2 since it was released (can't
remember when, but it was about two or three years ago) and have never had
any problems with the disk. You can copy all the files to your harddisk and
then only the copy protection is read from the disk when you start the
program, so I wouldn't worry too much about it. If you want to be on the
safer side, there is also a version which has the copy protection on a
cartridge - but then you would probably need a cartridge expansion to switch
between the different cartridges...

Best regards,

YES it IS! I was Given the 550meg scsi drive I have in my TT/030
and I would formatt and partition it and reboot and the TT
would NOT even know it was there! I ended up calling seagate
and yes, I had to turn parity OFF to get it to work.

Why don't you keep it? I've still got a working ST. I keep it in order to make copies of Kozmic 4 and Zonk, two shareware (now freeware) programs I wrote in STOS Basic. I *still* get the occasional order!

I use my ST with an NEC Multisync monitor which works in all the screen modes. I've still got my BBC Micro as well. I actually sold my first computer, a UK101 with 6502 CPU.

I find Kobold as an accessory to be a quick and very handy back up
utility. I've created Kobold 'jobs' for specific tasks, such as
*.bak files, only changed *.inf files, etc.
Kobold is fast, easily accessible is an acc in single TOS, or any
time under multitasking, and ultimately configurable for backing up.

Hi

Some of the TT have active termination on the internal bus. I have the
same problem with some HD they work with an external drive pluged in
but not alone. The advice I got from the maker of HD Driver is the the
bus need a small mod to make one of the pins active on the port with
power aparantly a very simple job this cures the problem!

Ultra will be fine, I'm not sure about wide, the connectors are 68 pins
so you'd need an adaptor at least and I'm not sure if they would work
even then.

When my last hard drive died, I looked in Computer Shopper, and, with
irrelevant iterations, ordered from Mega Haus, which used to do business
as Drive Haus, in Texas, USA, the smallest (1.2G) drive that was Ultra and
not by Quantum, and that has worked fine, and has a five-year warranty that
I will probably collect on, since this TT030 is on its third one.

I too have seen that instruction sheet. The project is quite simple,
electrically, and basically means a piece of ribbon cable running from that
DIP 68000 pins to the pins of the 68881. The communication from the 68000
to the 68881 is direct, and need not involve a motherboard.

If this is not on Hallvards site, I would be surprised.

The only problem with Kobold, with versions before version 3, is it will
remove any long/lower-case filenames on any partition it writes to. This
is a real pain when you've got a few hundred mixed case and long names.
I found this out the hard way :(

3742. For sale: Atari ST, hard disk, monitor, &c.

Newsgroup: comp.sys.atari.st
Date: 1998-05-22 00:00:00 UTC
From: rrt1001@cus.cam.ac.uk
Message-ID: <6k4p5h$8lj$1@lyra.csx.cam.ac.uk>
Source record: 100346

Having not used my Atari setup much for some years I'd like to sell it (I now use Acorn kit).

The system consists of:

* 520 STFM (TOS 1.2, 720K floppy) upgraded to 1Mb RAM
(Xtra RAM card is upgradeable with new chips to 2Mb (total 2.5Mb))
* 85Mb SCSI hard disk (from Ladbroke) plus The Link adaptor
* Philips CM8833 14" colour monitor
* Replacement mouse plus Atari original
* Bolistic joypad, Ram Delta joystick
* STOS Maestro sound sampling cartridge (8-bit mono up to 32KHz)
* Forget-me-Clock II
* External 360Kb drive

Software includes:

* MagiC 2
* That's Write 3
* Timeworks DTP 1 plus the Timeworks DTP book
* Games including Damocles, Another World, Populous, ProFlight, loads more that came with the computer, Llamatron and Revenge of the Mutant Camels (registered), Andes Attack...
* DevPac 2
* Hisoft C
* STOS

I also have lots of copies of ST Format, ST Review, ST User &c. and loads of cover disks.

Since I've been away from the Atari scene for a while, I don't know how much to ask, so make me an offer!

I'm in the area of Cambridge, England if you want to collect; I can of course arrange carriage.

It's now called Oases and was reviewed in Atari Computing 3 (February 1997). At that point it looked like Amiga and PC development had stopped and it had the same crude apps as you remember with the addition of a multimedia authoring tool which was no use either (Frank Charlton, the reviewer, said "... you could create more stylish true cross-platform documents on a basic ST using HTML and CAB").

Looks like a waste of time, really.

Cheers,
John

Is there software avialable for the Atari (I have a falcon and TT)
which allows the user to create gif animations for use in web pages?
If so, where can it be acquired?

Thanx,
Mark S.

I can recall an article in the local Tariland News (February 1986, I think), which carried a reprint of an American review of the ST by one of it's owners. I believe it mentioned "July 8th, 1985" as the date it was launched.

(Disc-loaded TOS 1.0 had a date of May 29th, 1985. The ROM version of TOS 1.0 followed about six months later [November 20th, 1985])

The problem with backing up Newsie files is that the various index files (which are updated every time you download/upload/read/delete) relate to the current state of your data files. If you overwrite an old index file with a later one, you will lose access to all the corresponding data files. I save each block of data files with its corresponding index. Also, ISTR that MAIL reuses the filenames of deleted items, so that the usual method of overwriting files by later files of the same name would destroy data.

For newsgroups, you could try appending the index for each group to the backed-up index, and adding the data files to the archive- whether you would be able to read the result back again via Newsie remains to be seen.

I have also tried the new Freedom 2.04, and have also found some disadvantages with it. IMHO theese are the main disadvantages with it:

1) Maybe it isn't important to people with faster computers, but it takes a little bit to long time for it to appear on the screen after beeing called. (I use an STe, and find the sluggish display rather annoying since the fileselector is something you use rather often)

2) The Interface. When used purely as a fileselector I don't think Freedom has the smoothest shortcuts to get to the files you want. I miss a menu with all installed drives, without needing to mess with submenus.

3) It uses quite a lot of memory for beeing a fileselector I think.

So much for the complaints..
I guess it must be ideal for people using multitasking a lot, and the program has really got some *very* nice functions....

But I don't think it is the right choice for people who want a fast, and not so memory hungry selector. I still use the Little Green Selector, since it has the necessary features, and is way faster... ..unfortunately it's an old program which is not supported/updated anymore.

Hi

I have been using Freedom for a long time now up to 2.04 works great.
If you use a mixure of VFat and normal TOS partitions there is not

much choice. The file selector is also the control pannel soe one less
acc taking up memory. The perceived lack of speed can be due to nor
having the cpx load at boot. A few programs do not work properly with
freedom bur these cand be flaged also in Magic just disable it
temporaly. Diamond edge is one program where this is necessary.
Selectric is excellent but freedom is way in front. Files can be read
direct from the fileselector etc...

Hi

Most of the problem with Yaho and cab was due the ovl file not cab as
such. The crashing is mainly due to ovl file not handeling certain
calls and very very long file paths etc

I am wondering if Hasbro has any plans on developing any thing for Atari computers? Also is there any new hardware developments for Atari computers and new compatibles. Whats going on with the evolution falcon and phenix? Can anyone help?

>me with a new one upon return of the old (now bad) disk. How can I make a
>backup FOR MY OWN USE, NOT TO PIRATE, in order to protect myself? Thanks!

It *MAY* be possible to use the 'dd' command under unix on a PC or
workstation if you can find a mate with one to create an image to recreate
the disk whenever you want or straight to another disk:
If the machine uses linux and has 2 floppy drives use this with the original
in drive 1 and copy in drive 2:
$ dd if=/dev/fd0 of=/dev/fd1

To make an image file in the home directory:
$ dd if=/dev/fd0 of=~/Image-of-disk

To copy this back to disk:
$ dd if=~/Image-of-disk of=/dev/fd0

]-The Amiga was made before then and Jack left Commodore when the
]-BOD bought out the Amiga company. He then made the deal with
]-WB to buy Atari. I belive 85 was when the 1st ST came out.

No, the Amiga was being -developed-. The Atari 520ST beat the Amiga A1000
to market by around 6 months or so. Jay Miner (Atari 800XL) did leave
Atari and was largely responsible for the Amiga's developement. I believe
that their company was initially called "El Torro" or something like that,
and was changed because of confusion with a certain lawnmower companies
name. The Amiga originally was called "Lorraine"... ;-)

PS Did you know that it very easily could have turned out that Atari would
have owned all rights to the Amiga? ;-)

Tell me more, Malcom.

The 'T' configuration of the TT SCSI bus is not very easy to work out.

ATM the only way I can get satisfactory results is to leave the TT's terminator strips IN (!!) even though I have 3 more devices on the external bus. Even then I sometimes get errors on HD read/write.

At one stage I was wondering whether to extend the TERMPWR line from the internal bus (which has TERMPWR applied) to the external bus (which has a separate source of TERMPWR) but, as far as I could see, there were no spare pins on the TT bus outlet.

Okay, its that time again...we have another winner at The DarkForce! BBS.
This month its:

Al Horton (yes, of the Computer Dungeon)

Al won because he called at least one time last month and his name was
picked. You too, could be a winner of a 6 month/3 volume subscription
to Atari Computing just by calling the DarkForce! BBS at least once a
month. Isn't a $30.00 prize worth a phone call that would only cost a
few cents from anywhere in the USA? ;-)

They do nothing for atari computers.
They use the name 'atari' to made new releases of older atari games.
I think for PC, Playstation..

Not for any Atari Hardware.. ./

The one and only new hardware is the german milan project.
TOS based..

: external bus. Even then I sometimes get errors on HD read/write.

A SCSI bus should be terminated at both ends, IMHO

: At one stage I was wondering whether to extend the TERMPWR line from
: the internal bus (which has TERMPWR applied) to the external bus
: (which has a separate source of TERMPWR) but, as far as I could see,
: there were no spare pins on the TT bus outlet.

Where it goes is the middle pin in the bottom row, pin 26, on a 50-pin
connector. Did this exercise to an external drive to use with a Link.

If you mean the DB-25 connector, the only spare pin is pin 25. If
Uwe said to do it, do it. If the DB-25 can provide TERMPWR, that has
to be where it goes. This is being said with reference to the TT030
field service manual.

: 1.x /snip/

I heartily agree. The only problem I have had was due to somebody else's
typing problems. When reloading things after a sudden disk crash, Freedom
would no longer send multiple files to GemView. I do not know were I got
the configuration file that made that work.

After some serious study, it became obvious that Freedom can do one of
six things with an application, and all the sample configuration
files had GemView mentioned under at least three of these mutually-exclusive
headings. Putting that entry under VASTART and removing it from all the
others made it a non-modal file selector again. Hooray.

Hi everyone,

I am debating selling my mega 4, I have a 1040STE that I use more often that the Mega4.

Here's what I have and if anybody would like to make an offer on it, please do.

Atari Mega 4 ST
4MB Ram (duh!)
Megafile 30 (30mb external HD)
Atari 13" Color Monitor
Mousey
Keyboard
No software (I'm keepin' it!)

The only thing wrong with it is that the floppy drive (internal) needs to be adjusted. The floppy works great, except you must hold down the lever with your hand when inserting a disk. About a $40 repair to replace the unit, or if handy with a screwdriver, could be tightened.

Thanks,
Scott

Well, I put this 550meg drive in after removing the right jumpers
and it has run for almost 3 years that way. Not until I moved
over here and the airline trashed my 4meg ST that I hooked up
the 130meg drive with ICD host to the TT's Atari ADHA port, and
now it runs that way, with my BBS up at night and running off the
adha drive.

Does anyone know how can I find (on the net) the complete electrical
scheme of ny atari 1040st ?
Thanks.

Thanks for your sensible comments Harry but I think maybe I should have
twopenneth now.

I'd go further and say that the originator show themselves as one who is
impatient, ungrateful and down right rude!

q> He's taken upon himself WAY too many duties and as a result, we have
q> to wait for translations of everything:

If Joe hadn't taken on what he has, you wouldn't have had english RSC's or
docs for many programs for a long time now.

q> Freedom 2.04

> When commenting on this one, Joe immediately stated two important facts:

> 1) He doesn't actually support v2.x yet. Possibly because v2.02/2.04 was
far

> first one he will support after v1.15e. I guess most of the worst bugs

must
> have been sorted out (though I've neither seen or tried it).

Actually TransAction aka the author of this reply is translating Freedom V2.20e at this very moment in time, however, I and I'm sure it has crossed the minds of the other TransAction members, begin to wonder why we bother to do so when there are people who are all to quick to complain.

I wonder if the author of the original posting is aware that the translation work carried out by Transaction aka Joe Connor, Mick Lock, and Peter West is done for FREE yes! FREE. it is done in our own time for the benefit of those who wish to continue to use the later versions, the downside of course is that it actually take time to do a quality translation.

May I suggest that you enjoy what you have today, be expectant of what may come tomorrow,

BUT! never never demand because you're likely to loose what you've got!

q> Thing 1.26

> v1.20 is available in English to registered users. v1.26 has been around for
> about 5 minutes. Give the guy a break... or translate it yourself - docs and
> executable of course... <sheesh>

I wonder if the originator is a registered user of any of these quoted??

> q> In fairness, Joe's translations and user support is good, but it
> q> would be nice if resources files would be rushed out the door, so
> q> people could at least start using the VERY latest of everything.

> Feel free to withdraw that. I'll think better of you if you do...

It would also be nice to live in a world where everyone appreciated what they had, instead of whining about what they might have!!!

I speak as an individual not as a spokesperson for TransAction (but I suspect my feelings would be echoed)

Please, be patient! we are doing the best we can.

Regards

Mick Lock

Yes, that was some editor then.

The autor was Manfred Schulein, and it was Creative Computer Design in Eltville
who destribute it.

Don`t know if they still around?

Well, I put this 550meg drive in after removing the right jumpers
and it has run for almost 3 years that way. Not until I moved
over here and the airline trashed my 4meg ST that I hooked up
the 130meg drive with ICD host to the TT's Atari ADHA port, and
now it runs that way, with my BBS up at night and running off the
adha drive.

You don't need a boot disk! Just turn on the monitor and the
machine and wait, in a short time you'll get the desktop screen.

You've luck then. I've tried to use it on my Hades and TT. As long as
I don't access the cpx's everything goes reasonable well. But if I
access the cpx's things going really bad. For some reason Freedom is
messing around with the color palette giving me a wrong colored
desktop. Also I found that Freedom crashes and alter the timesettings
when I try to view everything (*.*) when I'm in the cpx modus.
Sometimes I can't see what I type. This seems to happen with minix and
VFAT partitions.

OK, heres a strange request:
Has anyone ever come across any kind 'speech synthesizer' program for the ST which allows one to export the results as any kind of sample file? Or even via midi sample dump?

I'd be grateful for any info you can give me.
Thanks,
P~

I have a selection of Atari ST titles for sale.

This List Updated 23/5/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^

Prices DO NOT include postage.

GAME COMPILATIONS

Hollywood Collection (5d,ni) 5
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins
and Space Harrier (20 levels)
The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'
Atari 520STE Discovery Xtra Pack 5
Language Disk DE1 (ds)

Thanks. I would have appreciated, however, if you'd sent me a message
when you started using the program. I ask for it explicitly in the
file readme.1st.

For what in the fuck?

4 simple solder points?
Latest ModChip costs 10 DM ..

By the way: That's a atari newsgroup, not 'playstation' spammer..
It's a simple job, if you can read group names.

SCSI is a standard way of attatching devices and allowing them to shift the data about, to the best of my knowledge it just shifts data about, the format of this data needs to be interpreted to turn it back into the filesystem and the data, thus you need something to turn the data streams into something your Atari will recognise eg Extendos. Just like you need a hard drive driver for hard drives you need a cd driver for CDs. Another way to look at it is with your modem, there are standards that allow them to connect up and shift data between eachother but without your SLIP/PPP software the data means next to bugger all sense to your machine.

Do you own an Atari computer and one of the following Yamaha synths:
FB01, DX100, DX27, DX27s, DX21, DX11, TX81Z, WT11,
DS55, YS100, YS200, B200, TQ5, or V50.

Then check out my website. The URL is:
http://www.telebyte.nl/~mt/yseditor.htm
You will find freely downloadable EDITOR/BANKMANAGER software, sounds,
Cubase mixermaps, and more....

By the way, has anyone succeeded to unpack binarie files from encoded mail,
using NEWSIE 0.88 ?? (I haven't yet)

STUFF FOR SALE OR SWOP
****

CONTACT ME ON 01935 425974 32 GRASS ROYAL, YEOVIL, SOMERSET, BA21 4JW

email: martin.w6@ukonline.co.uk

ALL PRICES INCLUDE INSURED POSTAGE SO REDUCTIONS IF YOUR
COLLECTING OR ORDERING MORE THAN ONE ITEM.

If your interested in doing a bit of software swopping or need
software email me for my list. Either 1 disk for 1 swopping or 75p per
disk and 75p for postage on whole order. Please note I use a PC for
the internet not Atari (I have tried!) So I haven't got software
available to upload a lot of the time although some disks will read on
the PC without problems it can be a bit hit and miss. I'm happy to
swop software via email but it can take a little longer to organise
because of this.

I'VE GOT LOTS OF OTHER STUFF TOO FOR VARIOUS COMPUTERS, TOO MUCH TO
LIST HERE.

This is an exercise in rationalisation. I still have a Falcon and STe
and have no intention of selling them. Always interested in swopping
and consider anything really computer/console or electronic related.

ST 15WAY D PLUG TO 15WAY D PLUG(ST HARD DRIVE CABLE) £5
NORMAL ST/FALCON POWER LEAD £4.50 INCLUSIVE
SCSI 25WAY TO 50WAY CENTRONICS(NORMAL COMPUTER TO SCSI DEVICE) £7

MOTOROLA 68040EC 33MHZ PROCESSOR (VERSION WITHOUT MATHS PROCESSOR
WHICH RUNS COOLER) SUITABLE FOR CERTAIN AMIGA/ATARI/APPLE ACCELERATORS
ETC £35

MEGADRIVE CONTROLPADS £5 EACH (VARIOUS) MEGADRIVE ARCADE
JOYSTICK(BUILT LIKE A TANK) £10 ATARI TRAKBALL £10 ATARI 130XE
COMPUTER(JUST COMPUTER NO PSU ETC) £20 VCS AND ABOUT 10 GAMES £20,
ATARI SUPER CONTROLLERS £5 EACH.

PANASONIC PORTABLE STEREO CASSETTE RADIO WITH BUILT IN SLIDE OUT
RECORD PLAYER. EXCELLENT SOUND, A NICE BIT OF KIT. SOLD FOR ABOUT £140
NEW ABOUT 6 YEARS AGO. EXCELLENT CONDITION. £45.

UFO 26MEG Super Nintendo/Famicom backup unit with 1.6MEG high density
floppy drive. Very reliable unit. Full feature trainer and game save
facilities. Run 100s of SNES games from disk. About 50-60 great games

included. About 1000 you can use altogether, easily downloaded from
the internet. Also has PC comm port but don't have lead. £105
including postage.

Vectrex boxed with 5 boxed carts (all filters) offers around £200

MEMORY CHIPS
****

STE COMPATIBLE 256K SIMMS FULLY TESTED 50P EACH (7 AVAILABLE)

ALSO ONE 256K 120 NANOSECOND SIMM (SLOW SIMM) 25p

4x1MEG 30 PIN Simms. Take that 1MEG STE upto 4MEG. Transforms the
system. Includes disk with utils, boot disk with TOS 2.06 ROM image
etc. Quite a few utils. I've upgraded my STe to 4MEG and love it.
Superb on its own but much better if you have a Hard drive. £14
including postage.

VGA PC 640K WITH MONO VGA MONITOR(COULD BE USED WITH FALCON), 2O
MEG HD £40 (yes a basic but competent hard drive PC only £40)

BASIC PC WITH 2OMEG HARD DRIVE, 640K AND MONITOR £25 INCLUSIVE.

AMSTRAD PC1640DD WITH EXCELLENT EGA COLOUR DISPLAY (640X350 16
COLOUR DISPLAY), TWO 5 1/4 DRIVES. LOTS OF SOFTWARE, MOUSE, MANUAL,
EXCELLENT VERSION OF ELITE (RUNS ELITE AND ELITE PLUS) £35

SOFTWARE
****

FALCON GAMES. ISHAR(LEGEND OF THE FORTRESS) £10.

ST GAMES.

BLOODWYCH BY MIRROR IMAGE £3 highly reviewed Dungeon Master type game
F19 STEALTH FIGHTER (VERY HEAVY) £8 Classic flight sim
FRONTIER £10(SPARE COPY) The best ST game
SENSIBLE SOCCER £6 superb football game
SENSIBLE SOCCER 1992/93 SEASON £4 (NO BOX) updated version of above
SILKWORM £2.50 sideways shoot em up
SPACE QUEST 3 £8 Monkey Island type adventure
STARDUST £7 Highly rated and great looking STE asteroids game+3D
tunnels
WAR MACHINE £1

ST GAMES (JUST DISKS):

JOE BLADE £1.25 (easy to pick up explore and collect game)
SHADOWS OF THE BEAST 2DD £2 (impressive multiscroll adventure)
R TYPE £1.50, (brilliant horizontal scroll sh/up)
TEST DRIVE £1.50, (3D car race on mountain roads)
POWERPLAY £1, (excellent trivial pursuit game, upto 4 players)
GAUNTLET II £2, (overhead multiplayer sh/up, classic)

MARBLE MADNESS £1.25, (playable but a bit stale)
AFTERBURNER £1, (zero playability, honest ain't I)
SUPER HANGON £1.25, (very good 3D motorbike game)
STAR RAY/STAR GOOSE £1.75, (two classic formula sh/ups very polished)
RETURN TO GENESIS/ZYNAPS £1.50, (Zynaps is a classic sh/up)
MICROSOFT FLIGHT SIMULATOR 2 £2.25 (believable flight world)
ARKANOID 2/WIZBALL £1.50, (arkanoids great, wizball is hopeless)
BEYOND THE ICE PALACE/THRUST/THUNDERCATS £2, (3 classic games)
STARQUAKE/XENON £1.50, (xenons very good, starquake is dull)
ELIMINATOR/NEBULAS/ PACMANIA £2, (3 classic games)
CHOPPER X/ROADWARS £2, (two good games)
SPACE HARRIER £1, (I didn't like it)
STRIDER £1.50, (ok conversion but not a very large screen)
BLACKLAMP/QUADRALIEN £1, (blacklamps ok)
HATE (RAINBOW TOS ONLY)+AMIGA VERSION ON SAME DISK) £1.75,
DOUBLE DRAGON £1.25, (crude but playable beat em up)
SUMMER OLYMPIAD £1, (good quality game)
SECONDS OUT £1, (funny boxing game, very well done)
BUGGY BOY/IKARI WARRIORS £2 (two brilliant games)
BOMBUZAL/BOMBJACK/XENON £2, (3 very good games)
STARGLIDER/OVERLANDER/SUPER HUEY £1.75, (2 good plus dire Super Huey)
BLACKLAMP/OUTRUN £1.50, (Outrun is a good conversion of an ok coin
op)
OUTRUN £1.25,
DOUBLE DRAGON 2 DISKS(SS VERSION) £1.50

ATARI VCS 2600/7800 CARTRIDGES (CART+INSTRUCTIONS UNLESS STATED
OTHERWISE)

BOWLING(ATARI) £1.50
BREAKOUT(ATARI) £2REQUIRES PADDLES
CALIFORNIA GAMES(EPYX) £3 later larger cartridge with better graphics
COMBAT(ATARI) £1.40 still good for 2 players
DARK CHAMBERS(ATARI) £4 later larger cartridge
FROSTBITE(ACTIVISION) £2 frogger variant
GALAXIAN(ATARI) £2 very good sh/up
GORF(CBS) £2 nice multistage sh/up
KEYSTONE KAPERS(ACTIVISION) £3 excellent platform game
MIDNIGHT MAGIC(ATARI) £2
OUTLAW(ATARI) REQUIRES PADDLES £1.40
PHOENIX(ATARI) £2 good sh/up
STAMPEDE(ACTIVISION) £2.50
STAR MASTER(ACTIVISION) £2 star raiders clone
SUPER BREAKOUT(ATARI) REQUIRES PADDLES £2
VIDEO PINBALL(ATARI) £2
WARLORDS(ATARI) REQUIRES PADDLES £2

Pirate/illegal console with 127 VCS games built in. Names removed but
you can see its VCS software like; Empire Strikes Back, Keystone
Kapers, Pitfall etc. £30

3808. internal scsii install?

Newsgroup: comp.sys.atari.st
Date: 1998-05-23 00:00:00 UTC
From: Curt Johnsen <cjohnsen@delphi.com>
Message-ID: <Zrcl+yw.cjohnsen@delphi.com>
Source record: 100378

What type of hard drive will work inside the falcon?
and is instalation obvious? When I got the falc there were no
printed docs. This would be for a a scsii chain as I have
an external conner drive, Iam looking for another gig or
two and would like to use the internal space.
thanx fir an suggestions.
curt

3809. New MyMAIL version

Newsgroup: comp.sys.atari.st
Date: 1998-05-23 00:00:00 UTC

Message-ID: <6k6ntb$9a1$1@minox.tripnet.se>
Source record: 100379

```
Hi all !

You can find a new version (0.61) of MyMail at my homepage.

http://www2.tripnet.se/~erikhall/programs/mymail.html

Bugfixes and new things
-----------------------

**** 23.05.1998 ****
Rev: V0.61

- Fixed a fileattachment problem related with mail from MS Outlook Express
Outlook express is sometimes sending gif files with no name
this files are now named msjunk.gif to be able to decode the file.
- It is now possible to blockmark a word in the editor by
a doubleclick in the word.
- Some blockmarking problems fixed.
- When a address and the name together is too long in the To: field
the name is removed and only the address is displayed.
- TAB kay was not working
now it works but it will NOT insert a tab
it inserts 8 space chars.
- It is now possible to mark many mail items in the current mailbox
by holding down shift when clicking in the mail item.
- Turning off the animation of iconbar was not saved.
This is now fixed.
- Incorrect bubble help in editor icons are now corrected.
- Docs are partly updated.

You can add or remove yourself from MyMAIL mailinglist.
The add/remove page is found at:
http://www2.tripnet.se/~erikhall/mymailupdates.html
The mailinglist are handled by MyMAIL automaticly.

If you find any problems with MyMAIL please let me know.

Thanks to all of you for all the help i get from you all.

Best Regards

Erik Hall

If yours is a standard machine, you will only have room for a 2.5"
device. There is already an IDE connector on the motherboard for this.
You will get better disk speed with current IDE drives, and unless you
plan to use the internal disk with Cubase Audio 16, really shouldn't go
through the trouble to modify the internal SCSI termination pack to adapt a
SCSI cable. It's not worth the effort, and the risk of rendering your
machine usless is high. If you wish to really hack and cut, fitting a
3.5" drive is possible, but not very easily done.
Go to your local PC dealer and see what type of 2.5" IDE laptop drives
they carry. If you get a large capacity drive, you'll probably need to
purchase HD Driver to partition it (IDE drives do not require
formatting, and it isn't recommended as it could damage the embeded
information that the drive requires to operate).

Hi!

There is a PD program called QUASSEL which is availble on most atari ftp sites. Try umich. I worked with it a little. basically..you put in a word, and it synthisies a computer voice for that word. I do not know what kind of save/export funtion it has.It is mostly for fun, but I am sure you can do more with it.

The only speech synthesizer program I can remember is "Phone Voice"
by Dave Bagetta, (I think it was hin)?

It had no export options. But you can record what it says.

3819. Fine Tuning STing

Newsgroup: comp.sys.atari.st
Date: 1998-05-23 00:00:00 UTC
From: phantomm@eastky.net
Message-ID: <6k7k3e$k6p$1@ns1.sols.net>
Source record: 100389

Hi Atari Folks,

I am using STing with PPP as one way to access the internet with a
Falcon. I usually don't have any problems using STing, but I am
wondering if I am getting the maximum speed possible when using
programs like CAB 2.5 and Newsie. Especially when it comes to
downloading software and Web pages from the Net.

Below is part of my Default.Cfg that I use with STing.

```
#
# This is the STinG relevant stuff.
#
ALLOCMEM = 2000000
#
THREADING = 50
FRAG_TTL = 60
#
ICMP_GMT = -60
ICMP_AD = 10
ICMP_FLAG = 0
#
TCP_PORT = 1024
MSS =
RCV_WND =
DEF_RTT =
DEF_TTL =
TCP_ICMP = 1
#
UDP_PORT = 1024
UDP_ICMP = 1
#
```

This works fine on my Falcon but I am not sure what each command is
for and what these commands should be set to for maximum speed.
Maybe they already are?
So can someone explain what each Command does so that I can get a
better understanding and fine tune STing for my Falcon?
I usually keep up with all the Sting upgrades and etc. So I should be
up to date on the latest releases.

Also recently I upgraded from a 14.4 modem to a 56K modem. The overall
speed increase isn't what I expected it to be. So I think something is
not setup correctly. And for some reason I can only get a working
connection on the Falcon with STing at 57600 or below. I can dial
and connect to my ISP at 115200 but can do nothing else with the 56K
modem. Anyone know what the problem is?

(The 14.4 modem will not dial at 115200)
Another strange problem is that with the 14.4 modem I can connect at 57600 in 256 color or TrueColor mode and there isn't a big difference in speed. But with the 56K modem if I connect at 57600 in TrueColor mode. CAB v. 2.5 will time out or lock up because the speed is so slow. However if I set the Serial CPX to 38400 in TrueColor mode with the 56K modem. Everything works fine and the overall speed of everything is about the same as using the 14.4 modem at 57600 in TrueColor mode. Anyone know why??

Any help with any of this is appreciated. And if you post any replies, also send me a e-mail of the posting. As this ISP doesn't always pickup replies to postings as it should.

Message-ID: <01bd869e$55d1a7c0$LocalHost@default>
Source record: 100390

I have just put up a page about my program Fretcalc. It runs on Atari computers but it is possible to use on pc:s and Macs via emulation. This latter will require some computer knowledge though.

The main use for this program is to seek the best way to adopt instruments with movable frets to historic temperaments. I have also included the possibility to hear the results direct via MIDI and to analyze how well different chords will sound.

You can read more and download the program at:

http://www5.tripnet.se/~kennethm/FRETCALC/FRETCENG.HTM

>i take extendos for granted but have thought latey
>if the cd_roms are scsi why do we need these programs?

It's not just a matter of scuzzy, it's
also about differences in how the media
is setup and read. A CD is one thing, a
harddisk another.

Ask Uwe Seimet, he's probably the most
knowledgable to speak with in these
matters.

Source record: 100299

Cory Bonnett wrote...

>How can I make a backup FOR MY OWN USE,
>NOT TO PIRATE, in order to protect myself?

You could try an analog copier, like the
Blitz cable, which requires two diskdrives
and a special program. There are (were)
similar solutions on other platforms as
well. You could also ask a crafty hacker to
crack the program for you.

You needn't worry about the legal implications
of such actions. Once you're the owner of
this software you can do whatever you want to
it. Just remember what John Lennon did with
his Rolls-Royce...

In fact you can make 10.000 copies for your
amusement, but if you start reselling it,
well, then I don't know...

3826. ST web browsing

Newsgroup: comp.sys.atari.st
Date: 1998-05-24 00:00:00 UTC
From: Max Luburich <luburich@NOSPAMyahoo.com>
Message-ID: <6k7tkh$905$5@zingo.tninet.se>
Source record: 100300

screenstyles@hotmail.com wrote...
>How practical is it to use an ST for web browsing?

Not very practical compared to a PC or Mac. But it
can be done. If you're on a null-budget and want to
use the ST for this, then OK.

>Whats the best browser/modem combination?

CAB is a usable browser. You can use almost any modem
there is. Don't go under 14.400 bps.

>I have a 1040 stf with 4 meg ram. Are any hardware upgrades required?

A harddisk is strongly recommended. MagiC does wonders too.
You could consider a RS232 speedup to 38.400 bps with
a simple hardware modification. And an overscan would
enhance the resolution for you. Try Lacescan.
Although my heart beats for Atari machines I can't
recommend any (even souped up) ST computer over the
ordinary and very cheap PC systems for this task.
A TT with a graphics card is the least one can use
satisfactorily for browsing the Internet.
Some Falcons are OK too.

If you like Telnetting for your Internet needs, then
I'd recommend Connect, a real non plus ultra!
In that case an ST becomes interesting again...

Good luck!

3827. STBook owners?

>machine in general. Please contact me :)

Don't have an STBook but I know it contains
a built in ROM disk, 256Kb large with .PRGs
for file transfer and harddisk formatting.
If I remember right the ROM disk is unit P.

I have tried to install such a ROM disk in
an ordinary STE and it works without any
problems. The software is also duplicated on
a system disk. Of course, the idea is that
you should connect a standard ST/E to the
Book and thus you need the software on disk
as well.

I have such a disk myself.

3828. Program to load TOS Image?

Newsgroup: comp.sys.atari.st
Date: 1998-05-24 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6k89sb$7v2@news.Hawaii.Edu>
Source record: 100302

Greetings,

Does anyone know the name of a program that will load TOS image files on an ST? I have a machine with German TOS 2.06, and due to the configuration of the TOS ROM (1/2 square chip) I have as of yet been unable to locate a US version (and doubt that one exists).

I tried Quicktos, which promptly crashed with the TOS 2.06 US image that I found on the Internet, and can't remember the name of the other TOS loader that I once saw. Any help would be greatly appreciated.

Any other suggestions as to how I can get this machine to display English text would also be welcome.

Aloha,

>Below is part of my Default.Cfg that I use with STing.

Hi Phantom,

I don't really know about all those settings too, what I do know is adding proxy servers (when available) helps enormously. Wasn't it Charles who wrote about this some days ago? I added lines for a www-proxy in my case (since Demon don't use proxies for FTP or News) and the transfer rates went up by 50% at least. On good lines I download items up to 2200 bps (sometimes more) with a 14K4 modem. I've been thinking about a 56K modem too, but look at what's happening on the web: congestion all the time, it's a waste of money, IMHO.
Just add the lines in your Default.cfg for the proxies, then click "default" for use of them in CAB and there you go.
If others know how to set "better values" to gain speed, I'm more than glad to hear from them, too!

Fascinating, thanks Martin.

I would also like someone to explain to me why data on the reverse side or adjacent tracks of a high density disk gets dcurrupted in a DOUBLE DENSITY drive and why a DOUBLE DENSITY disk DOESN'T get currupted in a HIGH density drive.

Why do the majority of disks I have to sort out are people being told that they can use HIGH DENSITY (the ones with 2 holes in) in DOUBLE DENSITY drives, and the disks get corrupted. It's funny but I've not come across many cases the other way around.
Cheers! for now

Agreed, but what happens on a 'T' configuration? The terminators are effectively in parallel which halves their value. Am I thinking straight or does this sound like looking for excuses why my term. config. is so peculiar ? :-)

Ah!! pin-25 IS spare, isn't it. I hadn't noticed. What I really need to do then is to connect this to the TERMPWR line on the 50-way bus inside the TT which would then give a common TERMPWR line with the rest of the external kit. I'm going to need to have a good look at the TT PCB.

Copyright laws are complicated, some times hypocritical and
contradictory.

I had a disk sent me, Microprose Soccer, and it had a bad disk. I
contacted Microprose and they refused me consent to actually make the
disk good by copying another copy of the disk (both originals) on the
the duff one.

On the other hand when you buy a product, you in a way buy the
copyright to use that product.

The right to make a back-up of software that you use on a regular
basis is a very strong point. Most serious applications take note of
this and allow backups to be made for personel use. I have come across
some games that write to a protected disk, and the disk cannot be

backed up by traditional methods. I was playing a game, adventure type, had to have a write enabled, copy protected B disk; I can see the game in my head but can't grasp the title. Anyway something happend during the game that completely corrupted the disk beyond recovery.

Because of the state of computer games being very old and deleted from the publishers catalogue, I prepared to make BACKUP copy of ANY software on condition that you have the ORIGINAL DISK & MANUAL etc...

I will NOT REMOVE the protection. If a friend wants a copy, then they should buy a copy for themselves.
Cheers! for now
Steve

3836. FOR SALE 4MB STE

Newsgroup: comp.sys.atari.st
Date: 1998-05-24 00:00:00 UTC
From: COMPRESSION MAN <dazzaroo@global.net>
Message-ID: <6k8u6l$q7o$1@heliodor.xara.net>
Source record: 100310

I have for sale an Atari STE with 4mb installed and a STFM 512k.
The hardware extra's are Mastersound II sample cartridge, Playback Stereo output cart for STFM, Synchro Express disk duplication cart 4x 256k SIMM upgrade for STE (1mb) and 2X1mb SIMM for STE(don't know where the other two went?) and an external floppy.
Serious software is Hisoft Devpac ST assembler/debugger, Quartet sample sequencer, STOS, ST Sprite Factory and Chameleon, Canvas art package and Falcon and Mission disks 1&2 and a spectrum emulator.
There's also an assortment of games. Vroom, Head over Heels, F29 Retaliator and more but some games are missing boxes and instructions.
I've also got the Atari STE Turbo pack software but at the moment I can only find games disk 5 of the games disks, complete set of Atari Power Pack STFM software.
Cover disks , ST Format :-5,8,15,17,20,22,24,25,27,34,35,42,44,56,62,64,65,67,69,72. and additional disks with Spectrum 512, Write on, GFA Draft plus 3, STOS, Protext v4.3, Interphase game, GFA SPECIAL (basic 3.5, assembler & raytrace), Knife ST and Personal Pascal.
Atari ST User Jan (STOS 3D), Apr (Hisoft C), May, July ,and Sept (STOS again) and a few disks from other magazines.

There is other games, hardware and software but I have not sorted it out in the attic.

£120 plus postage, I'm Darron at dazzaroo@globalnet.co.uk

>
Hi Charles,

well, I changed the settings in my CFG and SCR files accordingly:

ALLOCMEM = 300000 (was 65000)
TCP_PORT = 1024 (was 1024)
MSS = 1460 (was 2000)
RCV_WND = 2920 (was 5000)
DEF_RTT = 60 (was 50)
DEF_TTL = 128 (was 128)
TCP_ICMP = 1 (was 1)

Note: according to the info from my ISP, they state
MTU size = 576 (I set that value in Dial.scr, now changed it to 1500)
MRU size = 576
TCP MSS = 536

So what's the difference: fetching articles (news) no significant change.
Getting binaries from newsgroups: these used to get in at around 1600 cps,
according to Newsies log. Now went up to 1670.
Getting binary files in CAB was only 800 bps, but just did one file and perhaps
it was a bad connection. Have to try that further the next days.

I'm just wondering, regarding those problems some people have with the later
TCP.STX modules from Sting, could they be related to the settings of those
values too??? If one thing is just "fat coffee", it's all those values.
So far I used the settings from the files in the Sting package, but it looks
like changing them could upgrade anyone's links.

Who's the wizard here???

Yo Charles again,

who sets the standards? No one, so the guys with the "most sold browsers" can
do it. If Alexander Claus/ASH hadn't put in all those new HTML-tags in their
updates, we'd been nowhere browsing the web...

I just visited Micro$oft.com yesterday to pick up a couple of new truetype
fonts, but the ones *with* the new Euro-character are only W-95 ones. The old
ones for Win 3.11 don't have it...
Now Mr. Gate$ may have had the SEC all over him about this Netscape/Internet
Explorer stuff, but he'll keep on going... who'se gonna stop him?

BTW: you tell me who's surfin' the net with a 10+ year old DOS-machine?

Hi non-wizards,

I was just wondering on my day-off, what's up with all those values?

Reading docs and other stuff, I came gradually under the impression that at least one "standard" is: MSS should be the MTU value minus 40. Correct?

Peter R. suggests in his docs (look at the info in Dial.scr) that MTU would be safe on 576, and puts the default value for MSS in the Default.cfg for Sting at 2000!
What am I missing here? My files were set to the values I got from the packages, but it looks like resetting MTU to 1500 (although my ISP "swears" at 576) and MSS to 1460 did some trick increasing the speed. Could give it another try with 576 and 536 respectively, and so could give it another try now with the new TCP.STX module... Maybe it would deliver hi-speed now...?

Then the other hieroglyphs: DEF_RTT, DEF_TTL, RCV_WND, could they influence tranfer rates? I still don't know whether the increase in speed (see my previous msg) came from resetting MTU/MSS values or changing the others, or both, or... just was another mishap??? :-)

Oh boy, I wish I had one of these fancy W-95/W-98 machines, just plug 'n play, no more problems whatsoever....

As I stated previously, there ARE other people available and interrested
in helping translating. I personally emailed several authors on this and
most of the time, the reply is: it's Joe Connor's call.

Kellis had previously released a quick RSC translation of Thing 1.xx
at a time when you were busy with other things and it turned into a
turf war over the newsgroups.

So, those are facts:

TransAction/Interactive OWNS the rights to translate/distribute many
aforementioned software. This means others cannot get involved, even
if they feel qualified to handle the translation.

>I wonder if the author of the original posting is aware that the
>translation work carried out by Transaction is done for FREE.

Yep. VERY much aware.

>I speak as an individual not as a spokesperson for TransAction (but I
>suspect my feelings would be echoed)
>
>Please, be patient! we are doing the best we can.

I am VERY patient. ;-)

Side note:

having contributed to Atari Computing in the past and registered
my copy of Everest, I must say Joe is a good bloke, so to those
who thought my post was a Joe-bashing: DON'T. YOU are WRONG.

3841. The Nordic Atari SHow 1998

Newsgroup: comp.sys.atari.st
Date: 1998-05-24 00:00:00 UTC
From: atari@ebox.tninet.se
Message-ID: <6k9ltqmuo1@cubacola.tninet.se>
Source record: 100315

Hi all!

Here's some info about our show:

T H E N O R D I C A T A R I S H O W '9 8

Where: IOGT-NTO, GOTHENBURG (A floor below Computer Club West CCW)
The address is F�rsta L�nggatan 20.
When: 12th -- 14th of June 1998.
Opens 12 pm on Friday, closes 18 pm on Sunday.
What: Exhibition and seminars,
Internet cafe and much more.
Cost: 100 SEK for three days, 50 SEK for single days.
Info: More updated info at http://www.tripnet.se/sak/nas and
http://welcome.to/nas98
E-mail: atari@mail.bip.net

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

We arrange the show for the fourth straight year we hope to fulfill
everyone's expectations and that this will result in the best possible
atmosphere.

WHEN AND WHERE?

This year the show will begin on Friday, June 12 and end on Sunday,
June 14. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 12 p.m. on Friday and close at 6 p.m. on
Sunday.

NAS98 will be hosted at the IOGT-NTO (International Organization of
Good Templars) quaters located in Gothenburg, just below The Computer
Club West (CCW) and between two places called J�rntorget and
Masthuggstorget, just where the Stena Line ferries goes towards
Denmark (not Germany).

At the exhibition you can see:

Thorsten Butschke (Germany)
As last year, Thorsten is here and showing and taking registrations for
shareware products and the magazine Atari Computing.

16/32 systems (England)
Nic Harlow has always been at NAS, so why any different this year?
He's showing CD:s for Atari, games and more.

SAK and SAK/Skane
The Swedish Atari Users' Association and the local department in Skane are
here too, to show different programs and computer systems in action.

Kockens Atari Support will sell products from RDT, SoftJEE och Dark Knight Games.
Portfolios, Jaguars and Atari utils.

The SEMINARS will be held from 12 p.m. on Saturday

- Erik H�ll
- About MyMail and GEM-programming
Erik is the author of MyMail.

- Jonas M�ller Nilsen
- Shows a Hades computer, Internet access.

- Mille Babic
- ASH Internet packages.
Swe versions of CAB, Fiffi and Emailer.
Also demonstrating Hompage Penguin Pro 2.5.
He also gives a lesson about going through the net,
practically, with you Atari.

more to come...

Best Regards

Mille Babic

: TT PCB.

Close, but not exact. According to the circuit diagram, pins 26 and
25 on the 50-way are both unconnected, and guarded on both sides by grounds.

What seems to be necessary is a nearby connection to the +5 volt line.

This can be easily found with a little careful work with a voltmeter.
Pin 8 of each of the three socketed resistor packs that the board
layout drawing says are right next to the DB25 SCSI port are connected to
+5 volts, if the mechanical connection is possible. One could tack solder
a piece of wire-wrap or similar to that pin of the resistor pack, and
re-insert it. Pin is probably towards the right edge of the mother
board as viewed from the top.

Last time UTSI was about 785 indexed programs, now we have 867.

Thank you very much to everyone who keep me aware of all kinds of
url available programs.

Don't forget to send me your comments but ABOVE ALL send me your links
to new and older programs which are not yet inside the UTSI ... it's
always a pleasure to add new links !

NEWS:
Let's have a look at the PERGAMON german company ... they sell very
well done software ... let's hope somebody will take time to translate
them ! All theur demos programs are linked from the UTSI but here is
their url:
http://www.pergamon-software.com/

Didn't the C-Lab Falcons use an internal
SCSI hard drive, while the Atari Falcons
used an internal IDE drive?

-- George Crissman

Well I can copy almost all DD PC/ST/Acorn and a few other formats on
my old Syncro Express on my STe. Unfortunately it doesn't do High
Density. I recommend you look out for a s/h one as there really useful
nowadays with software getting on 10 years old.

I've been caught out by software companies that won't replace faulty
disks after 2 or 3 years. .
PCs are great its Windows that's rubbish.

<Bzzzt!> There IS a Standards Committee responsible
for the Hypertext Markup Language (currently at
version 3.2). The problem is non-standard variants
that violate the spirit of HTML (like frames) that
are implemented anyway.

The problem is most-likely caused by companies
attempting to repeat the experience of Borland
International and their non-standard Turbo Pascal,
which became a de facto standard when it's market
penetration hit 65%.</Bzzzt!>

Well said Mick, although I'm pretty certain the original poster didn't mean
what he said to come out so abruptly! :-)

It's the same with Atari Computing magazine, we do it in our spare time for
the benefit of Atari users wherever they are.

Speaking of AC, issue 9 is currently at the printers and should be
despatched to subscribers very soon.

We're actually now working on AC#10 so that we can get back on schedule and
get this issue out in late June/early July.

Kind regards
Mike Kerslake

Fine tuning your TCP/IP bits and bobs.

> Reading docs and other stuff, I came gradually under the impression that at
> least one "standard" is: MSS should be the MTU value minus 40. Correct?

Yes, and MTU should normally be 576, it depends pretty much on what your
ISP uses and how much data normally needs re-sending.

> Peter R. suggests in his docs (look at the info in Dial.scr) that MTU
> would be safe on 576, and puts the default value for MSS in the
> Default.cfg for Sting at 2000! What am I missing here? My files were set
> to the values I got from the packages, but it looks like resetting MTU to
> 1500 (although my ISP "swears" at 576) and MSS to 1460 did some trick
> increasing the speed. Could give it another try with 576 and 536
> respectively, and so could give it another try now with the new TCP.STX
> module... Maybe it would deliver hi-speed now...?

They should be Maximum Segment Size and Maximum Transmission Unit, one
needs be 40 bytes less than the other because ~40 bytes will be the TCP
overhead. Set them to whatever your ISP says, MTU is most likely to be
576 or 1500.

> Then the other hieroglyphs: DEF_RTT, DEF_TTL, RCV_WND, could they influence
> tranfer rates?

Possibly, ata guess, Default Round trip time, Default time to live &
Recieve window. I don't see that the 1st 2 should need messing with,
increasing your recieve window may help, I wouldn't recommend you
increase it past 8000 bytes though. The optimum settings mostly depend
upon how much data tends to be folowing down your line at a time and how
often packets need be resent.

> I still don't know whether the increase in speed (see my
> previous msg) came from resetting MTU/MSS values or changing the others, or
> both, or... just was another mishap??? :-)

The effects to most people are likely to be minimal, in general if it
works, leave it alone.

> Oh boy, I wish I had one of these fancy W-95/W-98 machines, just plug 'n play,
> no more problems whatsoever....

I spot a touch of sarcasm but for anyone interested that isn't true
atall. These are settings that are essential to your TCP/IP connection
no matter what your platform is, the only difference is that on Windows
much of it tends to be hidden from the user in the registry or something
and you end up getting charged $30 by a shareware authour to let the
machine change them for you!

I'm not competing with regards to my replies, but I have a HD drive
and use the Happy Discovery Cartridge (ultimate back up hardware), and
so should be able to make a back-up for you then as a one off:)

Just let me know.
Cheers! for now

: answer

If there is a problem with Diamond Mirror seeing 1gig partitions, it may be with the way that the drive was formatted (sector size, etc...). What version of DM are you using? I'll have to do some testing to be certain, but I'm fairly certain that DM is installed and functioning on my Falcon and 4gig, 1gig partition scsi drive.

From: Stephen Angelini <trax@cedep.net>
Message-ID: <3568B293.4FDB36AE@cedep.net>
Source record: 100333

Hello Atari users!

What I am about to ask is totally unethical. But then, I have been treated totally unethically.

In December of 1996 (no misprint: the 12th month of 1996...6...6..) I purchased a monitor switcher from Toad Computers USA. A week later I decided to upgrade to MagiC 5. As I was a MagiC 4 user, I had to return my MagiC 4 disks as well as the first inner page of my manual. Toad acknowledged reception of these and told me they would be sending me the new version as soon as they received it.

I received a defective switcher a few weeks later without Magic 5, which I returned to them for replacement. Meanwhile my credit card was debited twice. I decided to forgo the switcher, and told Toad to put this money towards my upgrade of Magic 5. (The total paid was $44 USD; since I paid for the defective switcher return, they agreed this was enough for the MagiC upgrade.)

But as of May of 1998, I STILL HAVE NOT RECEIVED MY UPGRADE!!!!

I've phoned them every few months, and they keep telling me that the matter would be settled "shortly". Seems to me they have a quite mysterious definition of "shortly".

In the interim I have contacted System Solutions, who had no solutions for me: they told me that since my disks were at Toad, there was nothing they could do. I believe Ash (the makers) also told me the same, but it's been so long...

AFTER A YEAR AND A HALF, TOAD'S COMPLETE DISREGARD FOR ME AMOUNTS TO THEFT. This is my justification for what I am about to ask:

++++++++++++++++++++++++++++++++++++++

Can a generous soul possibly zip-up their Magic 5 disks, along with their key?

++++++++++++++++++++++++++++++++++++++

I realize this might seem to some as a ploy to get MagiC for free. I will gladly mail or fax a photocopy of several pages from the manual to Magic 4 to anyone who can help me but doubts my sincerity. I have no transactional record for the purchase of MagiC 5, since the transaction was never completed. But you could contact Toad (if you can) and ask about transaction # 66819, established on January 23rd, 1997. The previous monitor

transaction was order # 65789, established on December 17th, 1996.

It's just a desperate shot in the dark.

3860. problem with Logic

Newsgroup: comp.sys.atari.st
Date: 1998-05-24 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <3568b439.0@diana.idirect.com>
Source record: 100334

I'm having this very strange problem with EMagic Logic on my Falcon - whenever I go into the mapped instruments area and try to move the instruments around I get two bombs and Logic is booted out of memory! And then when I try to relaunch it the system hangs. It's Logic 2.1.

I'd like to be able to move instruments around so I can come up with layered instruments to use in my compositions, this problem prevents me from doing that. I never had this problem when running Logic on my STe.

Anyone ever had or heard of this problem?

-cut--

As I'vr mentioned before I am having what appears to be similar problems - trying to use a 33.600 modem with STinG 1.12 (is there a 1.15 now?) and dialler 1.15 with PPP on a 1040STe with port upgrade to handle 33.600 except that I can only use it when switched to 19.200. Set to 33.600 the speed drops to the point that mail retrieval can take an average of 2 minutes per 2k item on Popwatch and 0 bytes on Newsie.

Switch board and settings to 19.200 and everything works properly. I'm using CAB 1.5, Newsie and Popwatch.

I have tried all sorts of things in the last 4 months since going on line and this really is the final enquiry before I send the machine away for a "level 1 diagnostic" in case the upgrade board is the problem. I am using a proxy server.

>>Below is part of my Default.Cfg that I use with STing.
>
>Yo Dude, use this (if MTU=1500 in dial.scr) in your default's instead of

>MSS = 1460
>RCV_WND = 2920
>DEF_RTT = 60
>DEF_TTL = 128
>TCP_ICMP = 1

Would these defaults work on STe though? My default.cfg is:

ALLOCMEM = 100000
THREADING = 50
FRAG_TTL = 60
ICMP_GMT = -60
ICMP_AD = 10
ICMP_FLAG = 0
TCP_PORT = 1024
MSS = 2000
RCV_WND = 2898

```
DEF_RTT = 50
DEF_TTL = 128
TCP_ICMP = 1
UDP_PORT = 1024
UDP_ICMP = 1
```

The MTU = 1006 (dial.scr)

I have all the STX's coming up on opening screen, should I delete all except for serial, tcp, udp and resolve?
-cut--

HSModem is set up OK in the Auto folder. Drivin, mfp and STinG, assume OK as on 19.200 all seems fine.

Any last ditch ideas would be more than appreciated!

Thanks

Trevor

3866. MEGA 2 update

A replacement loader for issue 2 is avaliable. E-mail me if you want it.
Mega issue 2 is at update V1.3, Hold CONTROL while booting and see what
version you have. If you have taken notice of updates or had sence to join
the mailing list you should see V1.2 near the bottom of the screen.

This means you have the latest updated files, SImply then copy the new
loader onto disc 1 and overwrite it.

Dont forget to support issue 3 !!!

Hi,
I can recall receiving any recent emails from you, but in any case,
to answer your question about Mplayer:
Due to the extensive amount of time it takes to upgrade mplayer
(i.e.,
for each registered user, a new executible must be generated, now
imagine several dozen users, and there is an upgrade almost weekly), I
am
afraid that it is not time permitting to do so. So I would suggest
contacting the author (Guillaume Tello) and requesting an upgrade
directly from him, or requesting a means for upgrading.

I am sorry about this apparent delay.

> downloading software and Web pages from the Net.

It's easily calculated from the connection speed. The speed of the
connection as shown by the Dialer in bps (14400, or 33600) divided
by 8 gives you the maximum speed in bytes per second. There is some
loss due to protocols overhead, but that's the same order of magnitude
as you will gain due to modem compression. So if you get up to 4 kB/s
with a 33600 bps connection, you're well off.

Fine-tuning with Internet is very difficult, since network loads
fluktuate too much generally. So only 2.5 kB/s with a 33600 bps
connection is often *not* due to configuration problems.

> Below is part of my Default.Cfg that I use with STing.

There is very little one can do in that file for fine-tuning.

> Also recently I upgraded from a 14.4 modem to a 56K modem. The overall
> speed increase isn't what I expected it to be. So I think something is
> not setup correctly.

You'll need a 115 kbps serial link to the modem, so make sure the serial
port is set to 115200 bps.

> everything is about the same as using the 14.4 modem at 57600 in
> TrueColor mode. Anyone know why??

Sure. The data speed is quite a fair load for the system. Trouble is the
Falcon's video hardware isn't designed very cleverly. It steals too
much bus bandwidth from the CPU, and this amount increases with greater
resolution or colour depth. So basically the CPU has trouble coping with
the speed, and in greater resolution the video hardware additionally
slows down the CPU.

> Any help with any of this is appreciated.

Install HSMODEM. That eases things a little, but can't cure it completely.
You'll need to stay either with a moderate screen resolution / colour depth
or with a moderate modem speed. For a proper cure, you'll need some
accelerator hardware.

Cheers Peter

> 2000!
> What am I missing here?

You're missing that MSS is a system global value, while each link has it's
own MTU. So a machine can have an MSS of 2000, with three links to other
machines with MTUs 576, 1500 and 2040.

If the link to be used does not support an MTU >= MSS + 40 then the
effective MSS is lowered automatically. No reason to worry about the
setting in DEFAULT.CFG, it's just an upper limit.

As long as memory permits (and it does for the few connections at once an
Atari will normally have) a larger receive window will only improve things.
So lowering RCV_WND is a stupid idea.

Increasing the initial retransmission timeout value DEF_RTT also hardly
changes anything concerning the connection speed.

From the values posted here, the only sensible thing is increasing the
amount of memory for STinG. But that must be done depending on how much
memory is there in total. An 520ST owner will tell you to piss off if
you recommend the setting posted here.

> Oh boy, I wish I had one of these fancy W-95/W-98 machines, just plug 'n play,
> no more problems whatsoever....

You're kidding ! What do you dream of at night ? (No problems, with a W-95
machine, very interesting notion)

I installed STonX on my Linux box recently. Now I'd like to try out
MinT and the whole GNU software suite for the ST.

I've FTP'd the basic KNARF-package and read the docs that say that the
target partition gets Minix formatted during installation. Is there a
way to avoid the formatting like useing a pre-formatted disk?

Does anyone have some experience with MinT under STonX?

3880. mouse questions

Newsgroup: comp.sys.atari.st
Date: 1998-05-25 00:00:00 UTC
From: Dan Olson <dano@agora.rdrop.com>
Message-ID: <Pine.BSF.3.95.980525154949.5312D-100000@agora.rdrop.com>
Source record: 100157
Cross-posted to: comp.sys.cbm,comp.sys.atari.8bit,comp.sys.atari.st

Hi,
I just bought a Commodore Business Machines mouse today, I had searched a little in comp.sys.cbm before trying it out and all I found was simply that an Amiga mouse was incompatable with other earilier Commodore machines. Sence there was no other information on this mouse other than a serial number, I decided to try it on my Vic-20, and as it turns out it simply works like the joystick, for example, moving the mouse up in a game is gives the same affect as moving the joystick up. I also tried an Accutrack track-ball I got and found it did the same. I got to wondering if there was something special in the Commodore doing this, or if the mouse truly looked like a joystick to the computer, so I tried both on my Atari 600XL and then my Atari 2600, with the exact same results. I know that the Atari 1040 ST we used to have had a mouse that used the joystick port as well, but for some reason I thought it sent it's data through the two pins used for the paddle controllers, do the Atari mice work the same way as this Commodore mouse does? I thought I had read that Commodores used a different mouse convention, were there other types of Commodore mice for their 8 bit machines as well? I'm just wondering if what I have is something weird that's supposed to be used just for joystick-based software, of if the same interface is used on other Atari/Commodore mice. By the way, the mouse works great on games where you move something around the screen, I tested it on the 600XL using Centipede, and it worked very smoothly, much better than the joystick even. Please e-mail me a copy of any replys. Thanks.

Dan

> Can anyone help?
>

The only interest Hasbro has in Atari is to use the name, logo and old
VCS games to reedit them on CD-ROM for PCs and Playstation.

There will be no more Atari computers. Hasbro Interactive is not a
hardware company.

A possibility might be for them to licence the Project X console or some
other stuff, but that is nothing more than speculation.

The future of the TOS platform is with the clones. Only the Hades/Medusa
are reality, but an expensive option at the moment. The Milan si
supposed to start shipping within less than a month. Anything else is
still vapourware at the moment, especially the Wizztronics machine and
the Centek Phenix for which there are not even prototypes yet. The other
option is MagiCMac.

It is possible, but it's piracy. Don't count on people here to help you
do that.
There are plenty of people trying to sell old software, maybe you could
contact them if you want some of the old games.

> Can the ST read IBM 720k floppies?

absolutely, but make sure the floppies are real DD ones, not HD, and
it's usually safer to format them on the PC. Do not use long filenames
or folders.

Hi Paul,

and tks for the explanation. Well, I had my set up running but... ya know, always looking for improvement. So I saw those settings from Charles and thought, let's just give it a try. As I've told already, transfers on longer files went up some 5 percent. Have to check things in CAB the next few days, since these are less stable (depending on congestion, most of the time).

>--
You spotted a touch of sarcasm, it was meant as one BIG lump of it... :-) Maybe I should have added a smiley, but I just didn't. I went to my brother-in-law the other day, he'd bought one of these Multi Media Machines, you know, Pentium Blah II with the whole alphabet spelled out on it, W-95 (of course) and this whole bunch. 24 speed CD ROM drive (doubling as a kitchen mixer). So he'd had it only for a week or so and was yet learning to work with it. Everything ready-installed, a Navigator on the desktop with some fancy pictures. It appeared to me they (Microsoft etc) think of users as little kids, presuming the user is DUMB and have no better brains than a 5-year old kid... I bet this is impressive to one having seen nothing else than his grandfathers typewriter, but good lawd, am I glad I chose for Atari 10 years ago... OK, guess I'm lucky with a decent TT with (still only) 20 Megs, a very decent GFX card on a SVGA monitor, operating with MagiC/Thing etc... (wouldn't have even considered going on the net using my old faithfull ST)... but probably next year I'm gonna look for new hardware: this will certainly NOT be a PC, nor a Mac, but I hope Centek will have their machine up and going by then. If not, maybe a Milan or Hades, preferably 68060 for more speed. I still got some time left to watch things developing...

Have you tried the obvious ?

http://ftp.lip6.fr/pub/atari
http://www.umich.edu/~archive/atari/

There should be several chip music programs in there...

Usually, a tracker refers to .MOD files, which use their own samples,
not exactly chip music.

Cheers,
Nick

> Thanks !

What do you want to do exactly ?

Satellite is used to store sysex data such as sound banks, setups,
etc... for later use or to transfer to another sysex compatible machine.

BNK is probably the proprietary format for Soundbanks with satellite.

What program do you want to use the .SND files with ?

I have the feeling that what you are trying to do is to save the samples
from the 303 to play them on the STE. This is not possible AFAIK.

I don't use satellite, since it's all a bit complicated for what it
does. I suggest using MIDIAN which is a freeware or shareware program
that can be found on most FTP sites.

Yes but it was the 25-way SCSI connector I was thinking of.

>What seems to be necessary is a nearby connection to the +5 volt line.

Yup. But as most of my SCSI devices can supply TERMPWR to the bus I
could leave it to one of them to arrange this. All I really need to do
is to connect line 26 (of the 50-way internal SCSI bus) to pin 25 of
the TT SCSI port and then arrange that this pin 25 went to line 26 of
the external SCSI bus which would mean all SCSI devices would operate
from the same TERMPWR. At the moment the internal HD's TERMPWR is not
common with the TERMPWR used by the external SCSI chain and I'm
guessing that this might contribute to the termination 'funnies' which
I get.

Does this make sense?

If so I would tack a bridge from a convenient point on line 26 of the
internal bus to pin 25 of the DB port.

Yes, Smurf was released at the recent German Atari show.. the English
version should be with us soon - and CyberSTrider will be bringing
this for you.

It is a commercial graphics program... there is a demo version around
but I'll upload t my web site soon and inform everyone here when done.

Hi,

Can WINX run with MiNT & Thing (AES 4.1)?

I've been messing around and no such luck.

btw MiNT 1.14.7, Thing 1.20 and both WINX 2.2 & 2.3

Or is there another program that gives windows that Window Shade effect?

Thanks all,

Rich

Hi Seb! You could try going along to the ST Sound Pleasuredome site at
http://www.informatik.uni-freiburg.de/~knaus/stsound.html . In the "Tools"
section there's a couple of good chip msuic editors, including the
mighty Chip Mon 2! Also try doing a search for MegaTizer, as that's the
one the Senior Dads use, because we find it's also compatible with the
Falcon!!!!

Actually, there isn't, amazingly enough!!! The best place I can find is
http://www.informatik.uni-freiburg.de/~knaus/stsound.html !!!

> Usually, a tracker refers to .MOD files, which use their own samples,
> not exactly chip music.

Yeah, they usually do, but most of the chip music editor programs I
have seen are done in exactly the same style as the sample-based
trackers, so they bascially *are* trackers, except they're chip music!!!

I probably have it buried somewhere. My kids used to like that program,
but I haven't used it in quite a while, as the kids are using Wintel
games. I'm not sure, but it may have had some compatibility problems
with some of the later STs.
It was basically the first virtual pet. You had to feed it, play with
it, etc.

Can anyone tell me what the differences are between CD Recorder Pro, and the newer CD Recorder Pro 2 from soundpool?

Does the earlier version support red book com pliant audio CD Recording?

Does the earlier version also support Data recording and CD-ROM production?

Does the earlier version support multisession recording?

I have the opportunity to buy a used copy of the earlier version (CD Recorder Pro) at a good price, but first I need to know what it does/does not do?

Thanx much,
Mark S.

3912. FS: Accusoft Clip Art Library (U.S.)

Newsgroup: comp.sys.atari.st
Date: 1998-05-25 00:00:00 UTC
From: "Sheldon H. Winick" <s.winick@worldnet.att.net>
Message-ID: <6kcag4$8p9@bgtnsc02.worldnet.att.net>
Source record: 100273

For Sale (U.S.): My Accusoft IMG Clip Art Library of high quality IMG line art images for use with desk top publishing programs. All images were scanned by Accusoft at 300 dots-per-inch for high-quality results on matrix, ink-jet or laser printers.

The files tend to be quite large due to the high degree of detail, which means they can be used effectively over a large range of sizes. Each disk includes the ACCUVIEW utility which runs in HIGH and MEDIUM resolution to allow you to view IMG files of any size, pixel for pixel, through a scrollable window, OR reduced to fit on the screen. It shows pertinent file information including size, the dots-per-inch at which the image was scanned or created, and image size in pixels and inches. A slide-show function allows you to view, in sequence, all files in any directory, on any disk drive or on all disks that are on line, with variable display times. Any screen can be saved in DEGAS uncompressed format. There is a built-in HELP function.

You can have my entire library of 107 disks for $65.00 (free shipping) or individual diskettes for 75 cents each plus $3.00 for shipping per order (regardless of the number of disks you take). Here's a listing of the disks in this library:

I Tried using the latest Infitra .12b and the same thing happens. I waited 25 seconds before the mail got sent. At timeout counter started after about 20 seconds and then counted
down to 18 seconds before the message was sent. I did this a couple of times and it was consistent.

Hi,-
Yes there is a demo of that program.

You can get it at this ftp site:

ftp://ftp.cs.tu-berlin.de

Thomas Raukamp did a 4 page reviev in ST Computer Atari Inside # 5/98.

cheers Joergen

Also the local district attorney's office where Toad is located could help.
Toad is quite busy with PC and Music business, so they could help you if they
wanted. A complaint to the DA would encourage them to do so!

Yes, the ST version by Batteries Included was released. Since the Giga pet craze started, I too have been thinking how far ahead of it's time it was.

I am after the full Budgie Uk disk collection.

Budgie UK used to be Licenceware software, but due to the disbandment
of the programmer they have been puit into the public domain.

Thanks
Cheers! for now

Hi Magnus,

I have just been in touch with Christian Eyrich, one of the
programmers, about it. Smurf is really an excelent piece of graphic
software, especially for webdesign.
In short I can tell you this:
On April 4th they have released the first full (commercial) version
to the world. It is still in German, but an English version is coming
soon.
A demo can be found at ftp.cs.tu-berlin.de/pub/atari/incoming
(or: /pub/atari/graphic) and is named smurf103.lzh. It still has some
bugs, but Christian said that they were working hard on it and allready
killed some of them since version 1.03.
BTW the full version costs 69.-DM.

Ciao,
Karsten

A 2.5 inch IDE disk fits your Falcon; you need the ribbon cable that runs
from the motherboard to the drive and the cradle that mounts the drive into
the case.

Same here. Infitra 0.12b, Newsie, Antmail, MyMail (latest version) all
suffer from a time out of about 25 seconds before sending. STiK does
have this problem. The timeout is the time involved for STinG to
negotiate the link.

> Is there a driver?
> Thanks.....

Hi Jeff,

What harddisk driver do you use?
If it's AHDI, make shure that it is the latest version (6.xx I think).
You then have to configure AHDI so that it scans the scsi-ID of your
Zipdrive (this ID can be 5 or 6, check what it is in your setup), as it
normally only scans scsi-ID0. To do this you can use AHDICONF.APP. This
program can you find on most FTP-sites and some Atari specific CD-roms.

Hope this helps you,

Karsten

Trevor,

This might sound like a dumb one, but have you checked the port speed using the "Serial Ports" CPX that Peter includes with STinG? If 33.6 is really available, the CPX should report it as such.

Hi Karsten,

just checked ftp.cs.tu-berlin.de/pub/atari/incoming: wasn't listed.
Checked the /graphic directory, but that went wrong. So I grabbed SMURF09.LZH
from Maus-HH for a quick check:
certainly NOT faster than Gemview or Graftool (of which Graftool IS the
fastests, at least on a 24 bit system).
So far I found:
no decent output on my Matrix card. Kinda same as MGIF, this one won't give me
any decent output too on my card.
Corrupt JPG's not loaded, just a rejection. Graftool loads these, but won't
catalogize them. Gemview loads them too and creates some decent file from it,
which can be saved again (or: Gemview is good enough for restoring corrupt JPG
files, when the corruption is in the end of the file).
No support for PNG files. I know Gemview doesn't either, but 1st Guide,
Graftool and Stella do support PNG.
OK, this was with version 0.9, maybe things improved, but thusfar Graftool
stays my main viewer.
Looks like Smurf has lotsa options, but I need a decent output on my Matrix
first...

Message-ID: <896176720.349.0.spot.c3adfca1@news.demon.nl>
Source record: 100164

Hi Smurfers!

OK, just for the record *AND* the real TRUTH:

This on a TT030, 16 megs TT-RAM, 4 megs ST-RAM, Matrix TC1208, MagiC 5.01, Thing 1.26, NVDI-for-Matrix 4.12, Freedom fsel etc etc etc.

Clocked some speeds for 4 viewers, times are from selecting the file (clicking OK) till picture displayed on screen, mode 832x608 Truecolor (Matrix mode 24 bit + 8 bit overlay).

Pictures: JPG 150 kB, GIF 320 kB, PNG 330 kB. Note: the GIF and PNG files were only 256 colors.

Times in seconds

Graftool Gemview Smurf 1stGuide
latest version 3.18 (?) 0.9 latest version

JPG 16.5 25.5 18.0 12.0

GIF 7.0 18.5 8.0 9.0

PNG 12.5 NS NS 12.0

Note: NS = not supported

I may change the viewer for GIF/JPG in CAB to 1stGuide instead of Graftool :-)

I recall having done a review on Graftool for the dutch "ST" magazine in 1996, comparing Gemview, Graftool and Speed of Light in TT-medium:
For GIF's SOL was (by far) the fastest, for JPG/IMG Graftool was marginally the fastest. Working on the card Graftool beat Gemview on the 3 formats, SOL wouldn't work on my card.

How's that for the Truth?

The only version of ghostlink that I found is in, among other places,
the umich archive :

http://www.umich.edu/~archive/atari/Network/Local/ghostlnk.zip

It does work, but it will only run on the PC under DOS, not in a windows
DOS box. You really have to use the "restart in MS DOS mode" option, and
then launch the .exe on the PC.

Cheers,
Nick

I am not sure, Stephen, but perhaps they have some information on the
Postal Service's web site. Go to http://www.usps.gov.

Hope this helps and best of luck. It is so sad to see this formerly
respected company treating Atari users so terribly. Does anyone remember
David Troy's last article for Current Notes? I have little respect for
them now.

It's new to me that 1stGuide would support the GIF format ;-).
1stGuide deliberately does *not* support GIF because it's an obsolete
format and is actually surpassed by PNG as portable graphics standard
(particularly on the Web, see http://www.esc.de/homes/guivol/1stguide/snaps/
for example which is a 100% GIF free page :-). So the entry above must be 'NS'.

1stGuide does support the extended (X/T)IMG format, however. This is less
efficient than PNG regarding compression results, but it's much easier and
faster to decode and has comparable and advanced features (more bit depths
supported). And it has free portable source code, of course (img2png
conversions performed on a Linux box).

Regards,
Guido

Well, I don't know where they put it now.. I just checked this morning
and can't find it either. Sorry!

> So I grabbed SMURF09.LZH from Maus-HH for a quick check:
> certainly NOT faster than Gemview or Graftool (of which Graftool IS the
> fastests, at least on a 24 bit system).

Well, nobody said it was faster than Graftool. Actually I wouldn't buy
Smurf if I wanted a fast picture viewer, because it isn't. BUT the
reason why I think Smurf is interesting, is because of the many filter-
and effect options you can't find in other Atari apps. It looks like it
can do many jobs for wich I'll have to use Paintshop in Windoze at the
moment.

> So far I found:
> no decent output on my Matrix card.
As Smurf will be part of the Milan software package, I think
graphicscards are/will be handled better. (or am I saying something
stupid now?)

> Corrupt JPG's not loaded, just a rejection.
--snip--
> No support for PNG files.

I think this is still a problem :^(But it CAN read progressive JPEGs,
which Graftool can't read. :^P

Probably not.

It can't even be used with a Falcon, let alone a Mac.

Cheers,
Nick

GEM-View supports PNG through a separate module, which isn't included in
the main GEM-View archive.

> Looks like Smurf has lotsa options, but I need a decent output on my
> Matrix first...

You really can't compare Smurf to these other programs, since it's more of an
image processor than a viewer/converter. But I see your point.

>
> Any info would be greatly appreciated.

According to BigConvert's (bc177pd.lzh) guide to graphic file formats, PIC is from a program called PC Paint. Based on BigConvert's menus, it doesn't support the PIC extension, though. Maybe the guide meant PC Paintbrush instead of PC Paint, in which case you could try an Atari converter that supports PCX (like BigConvert, Imagecopy, GEM-View, GrafTool) -- a longshot but you never know. To add to the confusion, there's also an Atari-based monochrome format called PIC (obviously not the same format). If you want, e-mail me a sample PIC and I'll see if something can load and view it.

g> graphics standard

I've no doubt that PNG is the better format, but it's silly to call GIF obsolete when the web is filled with GIF pics and virtually no PNG pics. I guess you think VHS is obsolete compared to Beta, too.

JPEGTRAN does a good job of fixing many JPEGs that are corrupted at the end
(i.e. premature EOF). And unlike resaving the pic with, say, GemView, the
fixed pic is lossless. Just one of the many very cool things that JPEGTRAN
will do.

Replace the internal 40 Meg MFM with a bigger sized MFM device.
If you need a SCSI device you can use the same case, the rest is not
possible to use for SCSI. Also you need a DMA->SCSI adaptor
SCSI flatcable an last but not least, a better driver as AHDI.
And a nice harddrive..

LINK adaptors are a good buy ;-)

Spectre GCRs with manual, driver software, cartridge case and cover,
floppy cable & NO MAC ROMS - $50 each.

With MAC ROMs, please ask, as I have a very limited supply.

Eureka Clock Carts with driver software - $10 each.
If interested in a quanity of these, we can make a deal.

Also still have -
Toad's Atari Compendium CD - $10
Suzy B's Software Treasury (2 CDs) - $20
Ultimate Cubase CD - $30
Midi Thru Cables - $1.50

Well, actually, the official explanation was always "The OS", even though it
really does sound like the name was probably started as some kind of private
joke.

The initials "ST" also ring a bell, but Sam Tramiel always said they stood
for "Sixteen Thirty Two". I never really beleived that either...

Cheers,
Nick

I don't think there is anything as specific as this.

It will be a standard switched-mode power supply so you would diagnose
it and fix it as you would any other. If you are not confident about
this it would be better to take it to a TV repair shop.

Take care! Even the +5v/+12v power supply will have 350v DC in its
primary circuit.

The usual causes of failure (apart from blown fuse) are aged
electrolytic capacitors which will ususally show signs of 'bleeding'
onto the circuit board. But .. when these fail they may also cause
other components (switch transistor, primary rectifier) to go down.

>Switch board and settings to 19.200 and everything works properly.
>I'm using CAB 1.5, Newsie and Popwatch.

Forget the modem (DCE) speed of 33k6 - this will look after itself
depending on the quality of the phone lines and the speed of the ISP
modem.

You must set the port (DTE) speed to 38k4!!! Modems are very particular
about their input rates - they usually go: 9k6, 19k2, 38k4 .....
anything else will confuse them.

>I have all the STX's coming up on opening screen, should I delete all

Can't say for sure that they are still in business but the second
cd of the set was just recently released, I believe. And I thought
I remembered seeing that the husband of the team (their names escape
me at the moment) was going to appear at an Atari meeting/show in
Canada (TAF maybe) in the very near future (or maybe just this past
weekend.) Sorry for the vagueness of my answer but maybe it will
ring a bell with someone else. Wayne

Well back along I used ECopy to make DIM images of disks which appear
to be the same as the ST images as I used them with Pacifist.
Hopefully it should work the other way round.

Enjoy your STF it may not be Pentium 2 but there are some really
playable games for it.
PCs are great its Windows that's rubbish.

Having used an Atari ST some years ago, I noticed a Dutch ST magazine.
I was very surprised to read a short review of TOS 6.0 ((c) 1998) by
Atari Corp. ???
Also some new computer was mentioned 68040, up to 512 MB Ram, ...
Since I didn't find anything on the web, I think I'll go out and buy it
unless somebody has some links to Atari Corp

>

Hi Guido (and Magnus)

oooooooooops, soon as I read Magnus posting I thought: "F.ck yes, it didn't..."
I have been using 1st Guide some time ago and then recalled it just wouldn't
work with GIF's... so what happened: I did the test again with the same GIF and
after somany secs the picture displayed again...! Checked better, and instead
of 1st Guide, Graftool had kicked in... (Graftool's my installed app for lotsa
graphic formats in Thing). 1st Guide only displays a window with the header
shown as GIF87a or so and some cryptic stuff. Guess I'll leave Graftool as the
viewer for CAB then on these formats :-)
Don't worry about the other statements, I rechecked everything, times still the
same for all files on all prgs, except for 1stGuide with GIF.

BTW: I agree with Terry on the term "obsolete" for GIF; it's still widespread
being used, on Webpages etc. Personally I prefer PNG too, it can handle 24 bit
color too without being lossy, but takes quite some space then too...
Usually I do catting in PNG/256 colors, since the files are smaller than when
doing them in GIF.

Tks anyway for correcting me!

>

Hi Karsten,

as far as I've looked at it (that wasn't too long, mainly because I couldn't get a decent output on my screen) it looked some kinda similar as Photoline (got a demoversion of that one here). I still haven't bought Photoline because I simply don't know nothing about recent support/upgrades. It was mentioned by one of the dutch Atari dealers, I should say "dealers" - ACN in this case - which I don't trust. It's not listed in recent issues of their magazine and I never bothered to check with the makers/publishers (wasn't it ComputerInsel?)

As for the screen output of Smurf 0.9, which looked a lot like the output of MGIF on my card: unusable. MGIF's some program, I first came across it running my old ST on a SM144, it was still a TTP then but it managed to add two gray shades on top of the black and white output and thus the screen looked like a photograph (OK, maybe I *was* drunk then, but still....)
The problem with MGIF is: I can't get a usable output on my card. So the program still sits on my HD, but isn't used at all anymore. Real pity...

In the meantime, Eric DaCunha focused my attention on yet another program, which I'm gonna fetch from a site, so Smurf is loosing my attention for the moment at least. That's the problem with modern stuff, I once tried out an AVI-player, which required a Novacard. Well I don't have one and I wouldn't trade my Matrix for 5 Nova's either... so too bad for the programmer. Since Aniplayer works perfectly here I don't give a sh.t either.... Sounds harsh, but isn't the computerworld a harsh one (hello to Mr. Gates here).

Putting words in my mouth again...Using the Limbaugh tatics I see. I never
claimed of CompUSA's marketing superiority.
I can go on Wintel newsgroups and web sites and find complaints from CompUSA,
Sears, OfficeMax, Computer City, Circuit City, Fry's and Radio Shack.

Whats your point? This is a low margin/high volume business. If you want
your hand held, goto the mom/pop dealers and MicroCenter. Expect to pay a
little more for the service.

Most people don't and expect service for free.

As for Computer City...the situation is different in the mother country.
Computer City was not willing to support Apple like CompUSA did. So Apple got
out of Computer City, Sears, OfficeMax, Circuit City and Best Buy due for the
same reasons. CompUSA will be the only nationwide retailer carring the imac.
Plus there are the strong regionals such as Fry's, MicroCenter, ComputerTown,
ComputerWare and plus the thousands mom/pop and VAR's..

I think Jobs knows his business than you ever will. What he has accomplished
in ten months has been out standing. Even I had doubts about him early on.
Thats been erased.

Apple has increased their sales from Q2 over Q1 with out those retailers
because of what CompUSA has done according published info by CompUSA and
Apple. Plus realized savings from not supporting those retailers currently.

Hi Geert,

was that the Magazine from ACN? Just wrote about them....
Oh Gawd, if it ain't the Tramiels, it will be ACN launching vapourware again...

They did the same a year or two ago, stirring up rumours about the Atari Microbox.... now they're launching TOS 6.0 by Atari????

Geert, *IF* any new TOS goes to the market, it won't come from Atari Co... it ceased to exist. Might (repeat M-I-G-H-T) come from Germany, where people appear to have licenses to develop on TOS (from what I gathered).

There's new hardware alright, NOT from Atari but there's the Milan (coming up), there's the Hades/Medusa, MAYBE the Centek and something from Canada.

Don't trust ACN - they sell Gemulators... the makers don't see their fees and appearently they're selling illegal remakes of the boards or something. Fishy is for sure!
Also they bought the last few pallets with parts from Atari Nederland when it went down and still pretend they're official Atari Agents/Distributors in Holland...
They keep up their Magazine... with reviews of 5-10 year old programs! (or vapourware, whatever).

|> ...
|
|According to BigConvert's (bc177pd.lzh) guide to graphic file formats,
|PIC is from a program called PC Paint. Based on BigConvert's menus, it
|doesn't support the PIC extension, though. Maybe the guide meant PC
|Paintbrush instead of PC Paint, in which case you could try an Atari
|converter that supports PCX (like BigConvert, Imagecopy, GEM-View,
|GrafTool) -- a longshot but you never know. To add to the confusion,
|there's also an Atari-based monochrome format called PIC (obviously not
|the same format). If you want, e-mail me a sample PIC and I'll see if
|something can load and view it.

Thanks Neil... I'll send a pic along to you tonite. I'm not all that
hopefull, but you never know.

The thing that's always impressed me about MGIF is its display on a
monochrome monitor, using flicker mode. Absolutely astounding. I remember
years ago when Macs were mostly mono (and so was my system), I blew away a
Mac friend of mine with the MGIF display. Don't have that need anymore, but
anyone using a monochrome monitor would be well served to have a copy of
MGIF. (Not to say it's not useful for color users.)

Source record: 100224

Hi George,

>Didn't the C-Lab Falcons use an internal
>SCSI hard drive, while the Atari Falcons
>used an internal IDE drive?

Only the C-lab Falcon MKII have internal 2.5" SCSI drives as standard. In the MKX, internal SCSI is an option (though almost all are sold with SCSI) and in MKI you have to mount it yourself. The solution can be mounted in all Falcons and be bought from any Atari retailer since it's also sold separately from C-lab.
You remove the termination resistor packs in the Falcon and replace them with a small PCB which has a cable for the harddisk and contacts to be soldered into the holes that previously had the termination resistors in them... I seem to recall there is a single cable that's soldered somewhere else too (maybe for +5V supply to the drive?), but I haven't had the opportunity to check it out. The termination is provided by the internal drive instead of the original termination resistor packs, which means you can still connect external SCSI-units without any problems.
This solution is in fact very good (in spite of the fact that you have to do some soldering) since it enables you to have a very light-weighted music studio to carry around (if there is an SVGA monitor already present where you're going ;)) and when you need to, just connect external SCSI-devices for backup or CD-recording. All Falcons, including all the C-lab models, have a connector for an internal 2.5" IDE-drive, so if you can find the space for them, you can use both IDE and SCSI internally.

Source record: 100225

Hi Mark,

>Can anyone tell me what the differences are between CD Recorder Pro,
>and the newer CD Recorder Pro 2 from soundpool?

Which version is it?
If it is version 2.x, you can update it from the homepage www.soundpool.de,
free of charge :)))
If it's version 1, I wouldn't buy it - however, SoundPool may have some sort
of upgrade price that would make it worth the money anyway. Maybe you should
contact them about it before you buy.

>Does the earlier version support red book com pliant audio CD
>Recording?

All versions have been Red Book compatible, so you shouldn't worry about it.

>Does the earlier version also support Data recording and CD-ROM
>production?

The Pro version has two different programs provided, where one is for audio
only and one is for both audio and data. Previously there was an Audio only
version available, but they stopped shipping them separately after a while.

>Does the earlier version support multisession recording?

Not all versions unfortunately - even though they seem to support it :(
On the current version everything works very well.

Greetings!

Getting ready to move and need to start clearing out my unused items. I've never managed to get around to finding software and stuff for this so much as I hate to say it, time to say bye-bye!

Atari 520STFM in perfect shape cosmeticaly and functionaly. With manual and an Atari CX77 Touch Tablet (which came with it and seems to work though I'm not sure it's intended for an ST). Sorry, no mouse, software, etc.. Does have a TV adaper box and cable.

I've been trying to follow the newsgroup for an idea on price but haven't really seen much so I guess I'll just let it go to the best reasonable offer.

Thanks and please reply by email not in the newsgroup,

That would have to be Cubase. Maybe not too user friendly, but probably the
most solid.

In short, no.

But I've just registered this myself with Antony Lacey in England, and
received v2.76 registered and v2.86 unregistered. What version are you
trying to get atm?

4010. Atari ST on my Mac?

Newsgroup: comp.sys.atari.st
Date: 1998-05-26 00:00:00 UTC
From: jason@zero.abel.co.uk
Message-ID: <jason-2605980237500001@abel-159.abel.co.uk>
Source record: 100234

Hi, I once had a STFM and it was stolen on me.
I was then given a Wintel386 which served me well enough for a while, but I hated using MS. The monitor blew up and then I decided NO MORE!!!

By this stage, the ST looked dead, and the falcon seemed to fail to take off. I bought a Macintosh to replace my Jackintosh.

Anyway, it's good - very good - but I miss my ST. Is there an emulator available? I've tried www.emulation.net, but the ST emulator won't download & comes withour TOS roms.

Any ideas on what I can do?

Thanks,
Jason

Most likely you're loosing data somewhere on the path. This could be due
to lacking handshake (do you use a proper modem cable, and do you have
hardware handshake enabled, i.e. RTS/CTS setting), or due to CPU time
consuming background software started from AUTO or as accessory.

Check out the Dialer statistics.

Cheers Peter

Does it ? Interesting. I've been told by some people that the problem went
away when they switched to Infitra.

Try to observe the send/receive LEDs of the modem. When you hit the send
button, the send LED should flicker shortly. Does the receive LED flicker
(almost) immediately afterwards ? Or is there that 25 sec delay until the
receive LEDs does it's flicker ?

With some modems the flicker can be *very* short so watch carefully.

Well I called Seagates Tech support, as I had tried all the normal
jumpers on the front for drive ID, and the one digram I had just
showed them. The guy at Seagate asked the drives Ser. number and type,
and what machine I was using, when I told himan Atari TT/030, he said
to look on the back side at the 'PARITY' jumpers and to remove the
jumper cap and leave it OFF. This I did and it has been working
every since, he stayed on the phone with me as I formatted and
partitioned it. I have not touched anything else inside this TT, and
it had to have the parity OFF. The guy knew right away what was needed.

If the Atari Host card is in working shape, you can do away with the
mfm card and put a scsi drive in there, I've done that with about 4
or 5 old sh204's, I've got one hooked up to this TT that blew the
Atari host, So I replaced it with an ICD host and it has an 130meg
Maxtor scsi in it.

I know you just Love all these questions of mine! ;}

Is there a List Server program I could run on my TT?

Right now I'm running 4 lists off a server on the Muskrat Den BBS,
If I could have the software and run it myself manualy, I could do
as good as that one. Anyone know of any out there for the Atari?

Also, is there a web page or ftp that has an Atari IRC program?
I asked last week and got one realy stupid answer. I'id like to have
it and try it out on an IRC this friday night.

I had always heard that it was "16/32" because the 68000 was a 32 bit
processor, but Atari ran it on a 16 bit bus. When the TT came out, I
just assumed it was "32/32" because of it's 32 bit bus. At least that
was what was reported in STart Magazine way back when.

s> This frustrates me as well. Is there any way to find out what
s> the modem _really_ connected at (did it connect at 56.6 or did it
s> drop down sometime in the negotiation to a lower speed) instead
s> of just seeing what the speed of communication from my computer
s> to my modem is?

Assuming your modem provides the DCE rate in your CONNECT string, the STinG
dialer will show your connect rate. Of course, high speed connections are
subject to fluctuating up and down, so just because you connect at a certain
speed does not mean you'll stay there.

Yes! One of the biggest amusement parks in Sweden is located in Gothenburg.
Its called "Lisseberg". And there is a hotel right across the street, but its rather expensive :-/

Sounds like you have a C=1350 mouse. This was Commodore's original mouse, the "rolling joystick" as it is affectionately known. It sends standard joystick up, down, left, right, and fire signals (don't know how it does the right button). Commodore then came out with a true proportional mouse, the C=1351. This uses the POTX and POTY lines to feed an analog signal to the computer, and fire for the left button (I don't know about the right). These are the mice for the VIC/64/128 series. I believe there is a C=1352, but that's an Amiga rodent.

FS(UK) - Atari Portfolio

Atari's DOS based portable computer (slightly smaller than a VHS
video cassette). Runs for up to 6 weeks on 3 AA batteries. Lotus
123 compatible spreadsheet, text editor, calculator, address
book, appointments diary and phone dialler in ROM. Plenty of
other software from the usual Atari FTP sites etc.

Atari Portfolio - excellent condition, OS v1.072
Serial Interface & serial lead
128k memory card & brand new CR2016 battery
Full Manuals
& Book "The Complete Beginners Guide to the Portfolio"

** NB **
I can't seem to get the memory card to respond, so please
consider the memory card dead.

*** OFFERS BY E-MAIL PLEASE ***

Thanks

>
>Does the Serial CPX set both of these at the same time?

You should ALWAYS get a DTE (port->modem) connection at the speed you specify in SERIAL.CPX provided that the modem is capable of that speed (see modem handbook).

The DCE speed (modem->phone line->ISP modem) is determined by negotiation between your modem and the ISP modem and will depend on both their capabilities and the quality of the phone line. Normally you would expect to connect at the highest speed common to both modems.

If you want to monitor the DCE rather than the DTE (boring because you have already set this) add the line SUCCESS = CARRIER to DIAL.SCR either with a text editor or by using the Config/Modem Specific path in the dialer.

I have a complete Mega ST4 system and a TON of software for sale. Sale is open to all. I would prefer to sell the whole package as one lot, but will consider offers for individual pieces of software.

Package Price: $500 (US)+freight, or best offer. Inquiries should be directed to

WFChris@aol.com

The package includes the following:
Hardware
1 Mega ST4 & Keyboard
2 Monitors; 1 SM124 momchrome & 1 SC1224 color
1 monitor switch box
1 mouse
1 joystick
1 MouseMaster switch box
1 ICD 44 mb Syquest drive
1 SF314 external floppy drive
1 Cannon BJ10e bubblejet printer
1 Supra Modem 2400 (ok, its not very fast, but it was good enough for GEnie)

Software
Applications
Calamus
Flash
Clean Up ST
Word Perfect
Degas Elite
Data Manager
Word Flair
various utility programs such as NeoDesk
Games
Maniac Mansion
Empire
Star Wars
Gauntlet
Warlock
ArcticFox
King of Chicago
Thunderbirds
SimCity
Ancient Art of War in the Skies
Steel Empire
ShadoWorlds

Balance of Power (1990 ed)
Rorke's Drift
Railroad Tycoon
Storm Master
Populus
Power Monger
War in Middle Earth
Defender of the Crown
Lemmings
Hitchhiker's Guide to the Galaxy
F-16 Combat Pilot
Star Glider
Jeanne d'Arc (in German)
The Secret of Monkey Island
Autoduel
Hard Drivin'
Civilization
Realms
Their Finest Hour: The Battle of Britain
Frontier: Elite 2
Thrid Riech
Pirates!
Chronoquest

From: marksimp@com.com.net.com.net.com
Message-ID: <356c982e.0@205.238.18.7>
Source record: 100009

I tried to attach a binarry file to e-mail i was sending to a freind. If I select "none" as the encoding choice, and then select edit, it tries to place the binary file in the editor as a text file, (which doesn't work). If I try to edit my mail first, and then attach an un-encoded binary file, I'm cant select a file to attach. If I try to send a binary file without any letter along with it (un-encoded), it tries to send it, and then during the sending process the program crashes (68000 exception).

Is there a trick to this that I'm missing or what?

Thanx,
Mark S.

I hope the original poster takes Toad to the cleaners. They were
a lousy company. I got totally ripped off with the Gemulator emulator
that I bought from them. They sent it without registration cards,
and then outright lied to me, saying that they had registered the
program for me with Derrick from Emulators Inc.

Of course he has no idea what I'm talking about and I am not eligible
for the updates to the latest version. I must repurchase the program
from him in order to get any support. My version of Gemulator is old
and buggy, I really needed the promised updates. Well, I just
gave up on the Atari scene alltogether after that. I just visit
the NG's out of nostalgia from time to time. I've got an Amiga 060/50
now, and the whole setup cost me about $800 dollars.

Used A1200, w/ SCSI controller: $125 dollars (private seller)
060/50 accelerator, brand new $400 dollars (www.paxtron.com)
2.5" HDD 80 megs $30 (www.hi-tech-reno.com)
16 mg ram $30 (Wal-Mart)
Zip Drive, SCSI $150 (HH Gregg, department store)
NEC Multisync 3D $75 (www.auction-depot.com)

Not a bad setup really, and the same setup could be had today from many dealers... Although, if that Milan is going to support the PPC go with that. The 060/50 may be a new level of processing for an Atari, but its hardly fast compared with a modern pentium, or Mac. Don't get lured into paying a lot for it...

Now the Amigas have had ppc cards for a while, but to date no software runs on that, so why bother?

I wish the Atari market the best of luck, but Milan computer better be prepared to release some good development tools and recruit software developers.

phase5 says there are no 060 cpu's, but Motorola says they are
available, and they make the chip. Btw, Motorola has come out
with a new 75mhz version of the 060 chip, that chip is not
currently available, but the 66mhz and 50 mhz are, and they
are even available on the 'recycled' market for less than
$200 each.

I just bought an 060/50 for my Amiga just two weeks ago.

on 27 May 98 @ 23:43:02:

c> Well, you want to connect with the highest baud rate your
c> Falcon/modem will support, thus, 115200 for your Falcon.

That's not necessarily true. 115k2 on a stock Falcon is subject to an
increase in CRC errors, especially when multitasking and/or when in high
color. I've found 57k6 to be much more stable.

4041. FS: Atari 1040, Hard Drive, Ext Floppy, Software, $150.00(US)

Newsgroup: comp.sys.atari.st
Date: 1998-05-27 00:00:00 UTC
From: Stanley Nowak <snowak@pacbell.net>
Message-ID: <356CEECF.A77BF538@pacbell.net>
Source record: 100015

After 12 years of reliable service I must regretably sell my Atari ST. When I bought this machine in '86 I had to decide between the Mac (b&w monitor), Amiga (512K and memory upgrades were external port) or the Atari (REALLY, who considered the overpriced, underpowered PC?). I'm still convinced that the Atari was the best all-around machine.

I'll sell for $150.00 US (OrBetterOffer, of course) and you must pick up or, if you live nearby, I will deliver. I live in Daly City, California, which is just south of San Francisco.

These are components of machine:

Atari STF
1224 Color Monitor
210 Meg External Hard Drive, ICD connector (about 6 years old)
External Floppy
Epson EX-1000, 9 pin with sheet feeder (12 years ago sheet feeder cost as much as printer!)

Software

All the software disks and documentation are in excellent condition, but many applications, especially games have been transferred to zip lock bags.

LDW Power (Lotus 1-2-3 clone)

GFA Basic 3.0
Mark Williams C
Cambridge Lisp
STAC

DBManager

Flash II
First Cadd
Degas Elite

Extra Special trivia item: Original 1985 Atari ST demo disk

Let the games begin:

Gauntlet
Universe II
Breach II
Barbarian
Rogue
Shanghai

Checkmate
Battlehawk 1942
Dungeon Master (best game ever released on ANY personal computer)
Chaos Strikes Back
Balance of Powere
Star Fleet
Imperium
Fire Brigade
Railroad Tycoon
Star Flight
Empire
Sim City
PowerMonger
Populous
Borodino

There's probably a few more apps and games out there. I can't spend too much time doing inventory! Whatever I have, you get.

About 10 books, almost all related to programming in Atari or GFA Basic or C.

PLUS: about 60 Start and STFormat magazines and/or disks. For about 30 magazines I've only saved the pages that describe the software on disk but these pages are neatly organized.

Thank you for your attention,

Stanley Nowak.

You're talking about the Milan. It does look like a decent machine for
the price, considering that it's an Atari clone.

Greetings atarians!

If any of you are musicians or are studying music (like me),
maybe you are interested to know that I've written a (very simple)
GEM-program (in GFA-basic) that will help you improve you ability to
hear intervals.

If I just get a little positive feedback, I'm considering to add some
rhythm, scales and chords as well. 8)

But, I really have to say I'm *not* a very experienced programmer! What
I know now I have learned by making this program, so don't expect
something very fancy. 8)

If you try it, please let me know what you think!

Thanks!

4048. ATARI TO MAC MIDI COVERSION - Sugeestions Please

Newsgroup: comp.sys.atari.st
Date: 1998-05-27 00:00:00 UTC
From: hadman@my-dejanews.com
Message-ID: <6kfnkv$f3u$1@nnrp1.dejanews.com>
Source record: 100094

For years I have been using Notator w/Atari for sequencing, but recently I have changed to the Macintosh platform. Does anyone know how I can save my songs written on the Atari so that I can upload to the Mac? A way to save as standard MIDI files?

I appreciate any help you can offer!

Many Thanks,

Hadman

Source record: 100095

Hi Jeff,

>Does anyone out there know how can I use the Iomega Zip drive with my
>Falcon?
>I can format the disk, but a drive icon will not appear.
>Is there a driver?

If you use HDDriver, your problems will just fly away... ;)
The problem may be that you have to specify how many partitions should be
available for exchangable drives.
If you use AHDI, you may have a version that doesn't scan all SCSI addresses
and therefore needs to be patched. I'd go for HDDriver anyway - it's well
worth the few bucks it costs.

Best regards,
Claes

hello Dwight!

What a question! There are several "veratile" sequencers, each with there own stregnths and weakness. The standards (my opinion) has been Stienbergs CUBASE and Emagic's LOGIC/Notator /Creator. Then for something completly different there is Dr T's Omega II KCS, which is a midi heads tweeking dream! Then there is the EDIT TRACK series which a lot of Atari musicians swear by. Then there is the fairly new SWEET 16, which is still sopported(Roni music)., which has some very nice features and easy to use.If you are into Algorithmic stuff, then Intelligent musics 'M" and Hybrid arts 'Ludwig" would be worth looking into.Another program, though not a sequencer, but great fun is BAND-IN-A-BOX. Once you start creating your own styles, the real fun of the program begins. So which one to get?..HOW ABOUT ALL OF THEM! Just use the standard Midi File to go from one program, tweek it, then export to the next to create a very unique result!

yes, they are still in business - as a matter of fact, Michael
showed up for last week's TAF meeting. I'll forward this message to
Michael so he can get in contact with you.

Thanks for the advice J!! We (The SD!) can now check our brilliant site (http://seniordads.home.ml.org/) now works fully with our favourite platform!! (Anyone else want to help checking it???)

BUT!!!!!!!!!!!!!!!!!!!!!!!!!!1

We looked at the docs... AND!!!!!!!!!!

NO JAVASCRIPT SUPPORT!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!(!!!!)

This means the brilliant scroller which appears in the status bar of Netscape won't work with CAB!!! Argh! (Well you can look at the source code of the page, I suppose...)

Old Fart!!!

Do you happen to know if any of these sequencers you mention
allow you to input lyrics/chord symbols into a midi file which
will then show in real time on a keyboard LCD whilst the
midifile is being played? I can't do this with Cubase Score 2.

Cheers

LCD display is not supported by any MIDI standard. You can probably do
it with sysex messages, though you'll have to do that yourself. You can
certainly do it with Cubase Score 2 with the list editor.

Cheers,
Nick

1- Format some DD disks on the mac in MS-DOS format (720K).
2- Save them as standard midi files from the ST onto these disks.
3- Import the standard midi files from these disks onto the Mac.

How complicated did you think it could be ?

Cheers,
Nick

TOS 6.0 will be released by Falke Verlag, not Atari, with the new Milan
clone.

> Also some new computer was mentioned 68040, up to 512 MB Ram, ...

The Milan, will be either 040 or 060 powered, have standard PCI slots.
Have a look at this page:

http://www.milan-computer.de/

Wasn't it just "SixTeen" for the ST and "ThirtyTwo" for the TT as the ST was a 16-bit computer and the TT a 32-bit? Not that it realy matters....

Sounds like TOS 6 which the Milan guys are working on and the computer sounds
just like the computer Milan which the same guys are doing. I realy like this
Milan thingy and their webpae is excellent! One of the best and most interresting
I have found in a LONG time. I'm almost glad Atari Corp. is gone as Milan Computer
Gmbh looks to become what Atari Corp. should have been. If they continue like
this they will become the new Atari Corp, no doubt about that.

Take a look at: http://www.milan-computer.com/

I guess you are talking about Digilab (or something similar) which does look very
interresting. It has got a few problems though and that is that it crashes
from time to time. I do belive it may has to do with that I use realtime moving
of windows and Digilab is not very fast on moving dialogs because of all those
nice looking dialogs with textured backgrounds. Looks nice but make the program
crash when you try to move dialogs and windows about. Also, they could work
a bit more on the interfaces.

Well Guido has some funny ideas. The lack of GIF support is a major setback
for 1st-guide if you ask me, but I do not expect it to change either.

Well I'm sitting just a few room from Arne and Lars, if it were those you were visiting. I will say HI the next time I see you, or you could come by if you are down here.

BTW. Do you know if GNAT has been ported to MiNT?

4071. Re: Falcon and Iomega zip scsi 100mega

Newsgroup: comp.sys.atari.st
Date: 1998-05-27 00:00:00 UTC
From: Jacques Rypko <rypko@lal.in2p3.fr>
Message-ID: <356C3D52.789@lal.in2p3.fr>
Source record: 100117

hello !

I want to buy a zip Iomega scsi 100mega
to connect it to my Falcon.
I've got HDX and HINSTALL drivers.
Will the Falcon recognize the zip like an ordinary HD,
and it will ask me about format and name ?
Or I need special drivers ?
The Iomega society does not want to answer to my question !

thanks a lot,best regards RJ

4072. FS (UK): MegaST4 & Falcon030 with Developer Tools

Newsgroup: comp.sys.atari.st
Date: 1998-05-27 00:00:00 UTC
From: grh@hinton.demon.co.uk
Message-ID: <B191A3B29668509FF3@0.0.0.0>
Source record: 100118
Cross-posted to: comp.sys.atari.st,comp.sys.atari.sy.tech

1) MegaST4, TOS 1.04, keyboard & mouse.
Fitted with AutoSwitch/OverScan for 25% more screen area on standard
monitor.
9600Bd Fax Modem included with Calfax software for Calamus output.
No monitor or hard drive.
Original Diskettes & Manuals:
XBoot 3
Diamond Back 2 + Diamond Edge
Ease
Kobold 2.5
Calamus + Fonts + Font Editor
Imagecopy 3
Fontkit Plus
MagiC
KAOSDesk
NVDI 3
Pure C
Interface + MyDials
Tempus 2
Avant Vector
Border Bundles
and more.
250 GBP the lot. No splitting.

2) Falcon030 TOS 4.04 4Mb, 65Mb internal hard drive. ScreenBlasterII.
Atari and VGA video adapters.
Complete with official Atari Developers documentation with *circuit
diagrams* and other difficult to obtain technical info.

XBoot 3
NVDI 3
MagiC 4
Extendos Pro + SCSI adapter cable
Ease
SpeedoGDOS
Kobold 2.5
DSPDebug + ASM56000
Pure C
Interface + MyDials
and more.
There are C sources and examples on the hd for full GEM applications
including DSP so this system would suit anybody interested in serious
development.
350 GBP the lot. No splitting.

(15" AOC multisync colour monitor if required 200 GBP)

Courier delivery within UK: 14 GBP

Ok... I'll probably be down there now and then, at least during the
rest of May and June.

> BTW. Do you know if GNAT has been ported to MiNT?

I don't think so, but I think there is a port for amiga so it should
be doable. You will have to cross compile the first time, though. When
I buy another disk I might try to build a cross compiler on my ppc and
play around a little.

I just upgraded my old HDs to a newer one, so I have an ST251, ST4096,
and a 157N if you need them. The first two are 40 and 80 meg MFM
drives. I also have an OMTI RLL/SCSI converter I used with an ICD
STHA that got those drives up to 65 and 120 megs respectively.

Hi Magnus,

tks for that URL. I once tried out something like ...www.milan.de and got to a site alright, but nothing on what I was looking for... will give it a try again.

The main point of my posting was this miserable way of "bringing news" by these ACN people. About two years ago they created some "shock" by coming up with an article about "some Atari people having been working secretly on new hardware", referring to it as the "Atari Microbox", telling their readers they'd "seen documents/photographs of the hardware but had been threathened by Atari NOT to release these".... in fact it turned out to be even older information about the "then new Sparrow stuff".
So now they're previewing TOS 6.00 "from Atari Co"...???

I recall some time ago they reviewed the "all new Papillon 2.5", which (quote again) "was able to run in 24 bit colour instead of only 256 colors"; so I grabbed the demo from ASH's site and found it didn't run in Truecolor!!!

Lots of their information is misinformation, lots of it is plain bullshit.

Apart from that I came across this info about their way of handling Gemulator.

Referring to yet another posting: I recall ST stood for Sixteen/Thirtytwo, the processor being 32 bit, the external stuff (bus? etc) being 16 bit.
So the TT was Thirtytwo/Thirtytwo, being 32 bit completely.

obviously his anger at being made a fool of AGAIN has led him to cross-post his last message to just about every computer-related USENET group in a pathetic attempt to smear me (if you'll notice in the header of his last message, he sent the same message to comp.sys.amiga.advocacy and comp.sys.mac.advocacy) - which. BTW, is in violation of section 2.9 of his user agreement with Earthlink (it states that he can't post off-topic subjects in chartered USENET groups), which adopts a zero-tolerance policy towards such behaviour, as well as a violation of any agreements he has with DejaNews to post with.

In any case, I've gone to a number of the newsgroups and apologized for the intrusion.

There is actaully two "Falcon" project from Atari which were never released.
Both sounded rather nice. One was the MicroBox and the other was the Falcon040.
Both reached prototype level and some prototypes are even floating around. To
bad Atari never finished them and released them. They both looked great and
had good specs at that time.

The best rumour were TOS running on a IBM PPC computer.

> So now they're previewing TOS 6.00 "from Atari Co"...???

Well, it's not very easy to write news about Atari development nowdays so I
guess they take whatever they can get.

I doubt the availability of a 060 Milan as Phase5 currently doesn't
deliver any 060 accelerators for the Amiga as there are no CPU to buy.

Also Wizztronics say that they will release a 060 computer but it's
realy hard to do that when there are no 060 CPU to buy!

The ST has a 32 bit 68000 with a 16 bit databus, hence the term
"Sixteen/Thirtytwo", while the TT has a 32 bit 68030 with 32 bit
databuss ("Thirtytwo/Thirtytwo").

Yo Charles...Thanks for sending this information.
I changed my settings to the ones above and it seems to double my
overall speed now.

However the STing TCP.STX and UDP.STX that was released before the
ones that is on Peter's Web Page now seem to be faster.
TCP.STX 10707
UDP.STX 4878
These are the ones that seem to give the best results for me.

>
>Sure, you're setup is probably dropping to 19200 baud ;)

The computer to modem and modem to ISP speed is getting me confused.
What ever I set the Serial CPX baud rate to is what shows up when I
connect to my ISP. So how does one know what the actual modem to
ISP speed is?

Does the Serial CPX set both of these at the same time?

>

>your problem. If you can't decent downloads with this info, I'll "Optimize"
>STinG for your ISP so that it "smokes" on the Net as it should.

I went back and set the buffers in scc.prg to 4096 also. I do notice a big increase with Cab v.2.5. I will have to do some more testing though to see just how much of an increase I have now with other Net programs.
I'll e-mail/post the results after I do some more testing. I want to find out what my average is for downloading software with Cab and etc. with these new settings.

Thanks for your help with this.

With all due respect to both the atari and amiga platforms when I
originally wrote Amiga/Atari users unite , I meant a cross development
library since there are programming languages that are the same for both.
It would be nice and beneficial to both platforms for any software written
on one system to be easily ported to the other using extensive libraries.
Having the best of both worlds respecting the differences and similarities
of both systems. I remember when it was this way, now we need it more than
ever to compete against the Wintel dominance.

The milan is very impressive indeed. I have read that they plan to use the
68060 later this year and are also working on a PowerPc version as well. I
plan to buy one myself as soon as they release the name of the dealer in
the U.S. who will carry it. However I am not happy that Atari is gone. I
would like to see Atari release new computers as well if Hasbro would let
them, but I would want them to honor and support any compatible such as
the Hades, Medusa, DirecT40/T60, and Milan. Apple and the Amiga also have

compatibles, I would have expected Atari to do the same. The Milan looks like it could be the system to bring back the idea of" power without the price". I would still like to see the Phenix falcon compatible released as well. The more systems and emulators to run Atari software the better since it should bring back some of the best developers of hardware and software.

Hello all,

I have some Atari STe/ST items for sale. They are:

1040 STe with 4 megs of RAM, TOS 1.62
SM124 Monochrome monitor
ICD AdSCSI adapter with cable, disk and manual

I'd like to either sell these items or possibly trade for an Atari
emulator (preferably Magic PC or Gemulator 97/98 for the PC).

I have no problem breaking this package up.

E-mail if interested.

PowerPC??? Sure? That would be nice if it's true. Maybe a Milan with both a
PPC and 040 as on the Amiga accelerators to let you run old software on the
040 and new on the PPC. Regarding the 060 there might be problems as there
apparently isn't possible to buy 060 CPUs from Motorola, atleast Phase5
can't do it for their Amiga cards. Well, I belive it when I sees it.

Well I don't realy care if the company Atari exist or not as long as Milan
Computer Gmbh does a good job.

Well that would be nice, but I doubt it. They have their new ColdFire
family which is replacing the 68k family but only the first CPU from
this family is 68k compatible. It could ofcourse be an alternative for
the Milan to change architecture in the future.

It's called "Liseberg" not "Lisseberg". ;-)
I think it's even one of europes biggest amusement parks, atleast north europes
biggest. I guess Disney Land in france is bigger. :-)

There are lots of hotels in Gothenburg but there is also youth hostels which are
cheap. Some are good and some are better. I don't know where you can find them,
but try (for youth hostels):

http://www.stfturist.se/ or

http://www.stfturist.se/vandrarh/GSearchResults.asp?ID=Gï¿½teborg

It's all in swedish but there are telphone numbers to call. It might be hard
to get a hotel room as Volvo has reserved most of them this summer. :-)

> >was what was reported in STart Magazine way back when.

The 68000 data bus and ALU were 16 bits wide. The CPU had enough "brains"
to fetch two 16 bit words when a 32 bit value was needed.

The instruction length in the 68k family is 16 bit (or integral multiples
thereof)

The first 32 bit 68k processor was the 68020 (1985). The 68000 (1979) and
68010 (1982) were 16 bit.

> What would they have called it if they'd used a
> 68008 -- a 32-bit processor with an 8-bit data bus?
> (Yup -- four fetches per word!) Bonus points
> awarded if you can avoid any "phone home" comments.

Depending on where you were educated, a "word" in computer terms would
mean ALU width or data bus width. I prefer the former (ALU width), which
determines the maximum amount of data the CPU can process in one go.

In this case, the 68000 was a 16 bit CPU with 16 bit ALU and data bus, but
with a 24 bit address bus (a 16 meg *physical* RAM limit). (In reality 23
bits, as byte fetches/writes used a separate pin to specify which byte of
the word was being acted upon)

The 68008 was a "budget" 68000 with 8 bit data bus, 20 bit address bus (a
one meg *physical* RAM limit). I *think* the ALU was 8 bit (must reread
the comp.sys.68k FAQ to confirm this)

> No, I don't know why I brought this up.

And I don't know why I followed this up

>Is there a trick to this that I'm missing or what?

Yes and yes!

You cannot send binary over a mail channel as it contains
non-printable characters which upset the server (as you've noticed}.
The only time 'None' makes sense is if the Attached file is text only.

Do this:

At the first Post/Followup dialogue select MIME or UUE depending on
the capability of the recipient. You will usually find that MIME is
the best choice as not all PC systems can cope with UUE.

Click in 'Attached file@ to select the binary you want to send.

After filling in any other fields you require ckick 'Edit'. There will
be a busy period during which the binary will be encoded and stuck in
the message you want to send.

The mail including the encoded binary will then be dispalyed and you
can stick any accompanying message at the beginning (preferably) or
end.

Proceed as usual for 'Save', 'Quit', 'Queue/Send'.

4106. Papyrus Problem

Newsgroup: comp.sys.atari.st
Date: 1998-05-28 00:00:00 UTC
From: james.pirie@zetnet.co.uk
Message-ID: <6kjlbh$cc5$1@irk.zetnet.co.uk>
Source record: 99952

Hi Atari people,

I am stuck! I'm planning a move to Papyrus as my word/document processor from Pagestream, which is good but a little slow on the printing and screen updating side. I downloaded the Demo copy of Papyrus 5 from Hisoft' web page and started playing.

When I print out the reults of my experimentations a very strange and frustrating thing is happening. Papyrus seems to randomly exchange the letter d for the letterb. there is no pattern or obvious reason for this but still it persists.

I am using a Falcon with Nemesis board, 14Mb RAM, MagiC V4, NVDI V4. I have tried it with a bare system (and Nemesis disabled) but the problem persists.

Anyone seen or heard of this one? It's a shame because Papyrus looks good!! It works really quickly and prints out about twice as fast as Pagestream with the added bonus of GDOS support.

Help Appreciated as always :))

Regards

James K Pirie.

I think that's a demo "feature", just to make it unusable enough while
you can still test print quality and import features.

Cheers,
Nick

In my experience you have to save the files under DOS. Not a DOS-box,
but exit Windows (also with 3.x) and save it to floppy from there. If
you do it otherwise there is something done with the FAT. Maybe a
smart guy will write something to bypass it? It would be nicer to work
with the filemanager.

There is such a system, it's called Linux.

I have done a complete CD with KCS Omega II and would say it is pretty
solid. It has crashed while changing modes (track/sequence/song), though.

>
>Not really the most user friendly.

Yep, it is annoying that you have to switch between different modes while
putting the song together. Also, choosing options usually pauses the
playback.

I have upgraded to a Falcon and also got the Notator Logic (v. 2.5). It is
also very versatile and I like the fact that you can change things while the
music is playing. I think that Logic might be a bit too slow (screen
refresh) on a standard ST (get Notator SL instead) - it runs fine on the
Falcon, though.

I have also checked out Cubase but I like Logic more because you can
customize your working enviroment.

To sum up: KCS Omega II - cheap (no dongles needed), versatile (even
"exotic") but hard to use.
Cubase - solid, relatively easy to use, not as versatile
as Logic or Omega.
Logic - ease of use between Cubase and KCS, versatile,
customizable.
(I haven't tried Notator or Creator)

Logic Atari v. 2.5 is just about the same MIDI-wise as
the newest versions of Logic for Mac or PC.
And some say the timing is better on the Atari.

Greetings, Jouni

c> singleTOS(4.04)/STinG or MultiTOS/MiNT/STiK. AFAIK, a baud rate of
c> 115k2 doesn't cause me any problems. If you have a 56k Modem and a
c> 56k supported ISP, you'll be cutting off any compression by using
c> 57k6. This was explained here before. IIRC, it was recommended, if
c> possible, to use a serial port baud rate 2x-4x above your modems
c> listed baud. I'm not an modem expert, by any means, so I defer to
c> other's. However, I'll give it a try and see.

Oh, I agree that 115k2 is preferable, if your system can handle it. Mine
can't. But it also has to do with what kind of programs you have in memory,
what comm programs you're using, what res you're working in, etc., so your
mileage may vary.

c> BTW, where do you get these quotes? You seem to have a lot good
c> one's <g>.

I pick them up from many different places (e.g. TV, messages, the web, the
newspaper, etc.).

I am not too familiar with linux, so could you please help me out with a
couple of questions? I am curious if it is possible to run Uae and STonX
on linux as to be able to run atari software on the amiga and amiga
software on the atari? Also what software is available for linux that both
platforms use for cross platform development? Thank you in advance.

Thanx Roger,

I guess I was accidentally doing it right the first time (by not selecting "none"), without knowing it. And I guess the webmaster at my ISP misunderstood my question. I thought I was clear.

So if I MIME files when I send them, recipients using PCs who don't understand what a MIME'ed file is, will be able to use them, as their browser will automatically interpret whats happening, and decode the file. Is this correct?

If not, being completely PC illiterate, what do I tell them to do?

Thanx again,
Mark S.

Source record: 99973

Hi all,

especially to please Eric DaCunha (well, he asked for it) here's another test
on speed with this time Graftool, Gemview, 1st Guide and Digital Lab.
Since D.Lab won't run from MagiC here, the environment is slightly different,
running from TOS 3.06 without NVDI.
Just checked the GIF and JPG this time

Digital Lab Graftool Gemview 1st Guide
GIF 320 kB 13 secs 8 secs 19 secs NS
JPG 150 kB 15 secs 16 secs 27 secs 13 secs

also again in 24 bit + 8 bpp overlay on the Matrix.

A little note: D.Lab version 1.05 plus the Parx.sys plug-ins, the JPG import
module is a demoversion (conversion to grayscales only), for Falcons there's a
special import module using the DSP.

(Satisfied, EriC?)

Hi Magnus,
I have a Solton MS50 keyboard which plays midifiles
straight from the disk. If the midifile has Lyrics and sometimes
chord symbols recorded in time with the song, the keyboard LCD will
show them in real time as you say like a karoke file.

I would like to be able to add lyrics to some of the midifiles
I have, but Cubase doesn't want to know about it. Notator can do the
job, but as I have Cubase which I have found to superb in every other
aspect, I was wondering if anyone knew of a more basic sequencer
package that was capable of inputting lyrics. I understand that
Cakewalk can do the job also, but AFAIK there isn't an Atari version.

I don't have a Falcon. I use a Mega STE for music etc. and an
STFM for the internet. I've got the same gal/pal problem as Ross on
the Mega STE which caused me no end of problems. I never did find out
how to overcome the problem, so I just keep it well away from the
modem now.
Thanks for your interest.
Cheers

Hmm!! Actually I am quite glad to hear that, you have no idea how many
variables I have tweaked within NVDI drivers and printer settings, you
would think that this would be documented just as the one page only
printing limitation is. It's also a pest being unable to import
anything but *.IMG format Pics as well. Still can't have people
stealing your software I guess.

Thanks for the help.

#The real thing doesn't do anything like this.

Like I said to Nick, I am relieved to hear this, even though I have
spent the last 24hrs frantically tweaking everything in sight and
dissappearing in a pile of discarded printouts :)) You'd think Hisoft
would point this little limitation before people wreck their setups in
an effort to cure it?

It's a great life this :)

Thanks again.

#
#I'm sure you will find that this is just one more of those crafty
#tricks in the Demo version, James :-))

It's certainly the general opinion in here and, as I said before, I'm
greatly relieved to learn this. Now what can I sell to make the money
to buy the full version. Anyone want a well used STFM?? :)

#
#Which demo have you got? There is a v5.05 around somewhere. It
#probably has the same annoying 'demo-habits' though.

I'm not entirely sure, the archive was just called Papyrus5 but it
could be 5.05. I got it yesterday from the Hisoft Web Site, one would
imagine it would be the latest version? But you are right it will
probably have the same limitations. Not really a great demonstration
when there are no Docs and little support for images however I suppose
you do get the idea

Thanks for the reply Roger, speak to you later.

Linux is a new OS, to replace TOS and AmigaOS respectively.

It is _theoretically_ possible to run Uae and STonX in Linux on both
Atari and Amiga, but it would be very slow, at least on most of the
common Atari/Amiga machines at the moment. Uae and STonX also emulates
the CPU, which takes a lot of time.

Why I mentioned Linux, is that it uses the same binaries on Atari as
on Amiga. You can't however directly run neither TOS or AmigaOS
binaries in Linux. There are projects (dead or alive) to emulate the
two from Linux. I'm involved with the project, called OSIS, on the
TOS/GEM emulation in Linux, but it's not really useful yet.

I realized that Linux was probably not the answer you wanted, but
rather a kinda of layer on top of TOS/AmigaOS in order to run the
other one. I don't know how easy that would be, if possible at all.

Hi

I think that this is a problem with the demo I am up to 5.3 which is
very smooth. The german demo off rom's home page works fine with no
problems accept for the print limitations to two pages.

ROM page is http://www.rom-logicware.com/defaulte.htm There is a V6 in
the works which has some very tasty features such as word 6 native
imp/exp format etc.. The RTF of V 5.3 works really well it will open
word 6 docs but with a bit of rubbish at ate start and the end.

Any try the Version at rom eventhough it is in german it is easy to
work out.
Regards

i would agree with the microsoft/coke comparison
but i do not agree that geting them to put netscape on the win98 cd
would be like requiring coke to put 3 tins of pepsi in a sixpack
pepsi are just as corupt as coke. but microsoft is a money company and
netscape is a technology company.

microscum and coke are the same thing as disney and macdonalds are,
and that is corupt capitalist scum. they don't care about their customers (and
definatly not their employees), they care only about money, not just having
enough money but having *all* the money

allthough it could be argued that we need to have buisnessmen
there is no reason why any one should be able to have *all* the money
just like bill gates wants, he even gave apple computer financail support so
that he wouldn't be the only software vendor and hence keep the government off
his back.

a few weeks ago i put an advert in the localpaper asking for an st
and i got about 10 people phone up the very day that the paper came out
and the phone didn't stop ringing for about a week afterwards, no one wanted
more than ï¿½40-50 and i ended up getting a 520ste with an extra flopy drive and
a tv for ï¿½50
and iv' since upgraded to 4mb, i got all 4 simms for ï¿½8 at a shop that does pc
upgrades (the simms are 30pin 120ns or faster, parity doesen't matter)
much easier than buying online or mail order

don't settle for less than an ste, because you'll need an expensive upgrade
(ï¿½30) for a stfm/stf to be able to add memory

Martin.w6 wrote:
>
> If so email me with details.
> PCs are great its Windows that's rubbish.
>
> Email: martin.w6@ukonline.co,uk

nah pcs are rubbish to, you won't beleive the trouble one of my mates has had
with his pentium and cubase vst, first of all he couldn't vst working with his
sound blaster card , it to about a month to sort out
and even then it wasn't proper full duplex, so he decided to get a darla audio
card ,which wouldnt install at first and then crashed at random intervals when
we did get it recognised, so now he's going to start again with a new system.
well, i supoes that windows is most likley the problem because it still
crashed when we sorted out the irq conflicts(they aren't great anyway...)

good luck with you atari search

c-lab should push their falcon as an alternative to all the pc audio stuff,
rather than not advertizing at all they'd, make a tidy living from cornering
the market in pro audio, that is the only way that i can see atari comuting
developing in any way.

i spent about ï¿½70 on an atari ste and pro 24 and now i have a working computer
setup in my studio.
my friend spent about ï¿½1800 on a pc with vst and darla and he doesen't have a
working computer in his studio

thats why i use an atari, because it works now, if the atari world stays still
forever it'll suit me fine, it don't need tomorows technology next week when
yesterdays technology works fine today.

perhaps it would be worth using ppc and an emulator
rather than sticking with the 68k chips untill they end up as overblown as the
pentium, as you may have seen from the adverts in the times latley ppc chips
are beginning to pay off for apple as the new g3 "toasts" the aging pII's
crumbling 8086 heritage, mind you, i can't fault intel's marketing stratergy
(apart from the sickening adverts :-) just be the biggest manufacturer and
you can't go wrong..... or somthing.

whatever happens i'll still use my atari as long as it continues to work.

the computer might survive but the simm wouldn't
edo is 3.3 volt standard is 5 volt AFAIK
in my opinion it wouldn't be worth the risk, you could probably trade it at a
shop for one that would work, newer edo simms are bound to be worth more than
the older simms that you get in a 630

i've seen them advertised for over ï¿½1000 in music technology magasines like
futuremusic and the mix in trade adds and clasifiedes(inc cubase &fdi)

hang onto it i say...i don't think that the falcon will be dead in the studio
for an other to years or so yet. c-lab are still selling new ones for pro
audio workstations and they are certainly more pro than windows is.

is their any audio software for linux? can't say that i've heard of anything.

>(almost) immediately afterwards ? Or is there that 25 sec delay until the
>receive LEDs does it's flicker ?
>
>With some modems the flicker can be *very* short so watch carefully.

OK, here is my modem led information.
I press SEND and I see the TX light and immediately the RX light lights up.

No send yet.

About 7 seconds later the same thing happens TX and immediately RX but no send.

About every 7 seconds or so the cycle repeats.

When we get to about 25 seconds all of a sudden the mail gets sent.

Posting to the News Group happens immediately -- no waiting.

4155. VME Page: Take note MegaSTe/TT HW Hackers

There is a webpage with an online magazine for vmebus based computers. It's technically oriented and probably very good for those few that would like to create interesting hardware devices for MegaSTe/TT/Medusa/Hades computer's VME slot. I get the impression that there should be a way to connect a PPC to the VME. If the ATW(Atari Transputer Workstation) was basically a T800 computer on a card with the Mega ST as the I/O server for it. Can't this be done? They are doing for the Amiga in the form of the Picasso IV card.

Hi Nick,
I do know that Notator can do the job, but can't justify
buying it as well as Score 2. When I load a midifile with
lyrics/chords embedded in it into score 2, theres no sign of the text
in any of the edit screens. I was hoping someone might know of a
shareware sequencer program that was capable of doing this.

Complete Atari Computer System For Sale

Please make best offer on entire system or individual component(s):

* Atari Mega ST2 with 4 MB RAM (original 2 MB, plus 2 MB added)

* Spectre GCR cartridge with Mac ROM chips (emulate Mac Plus/read & write Mac disks)

* 48 MB Seagate external Hard Drive (in ICD FAST casing)

* Atari SM124 High-Resolution Monochrome Monitor

* VideoKey (converts RGB to composite color)

* GTS-100 3-1/2" Floppy Disk Drive

* Panasonic KX-P1080i dot-matrix printer

* Applications: MS Write, 1st Word Plus, Degas Elite

* 13 games

Please respond via email to rparker@slip.net as I do not frequent this newsgroup.

p.s. I am located in San Francisco, so sale would be easiest to facilitate to someone in Bay Area.

Dennis, No - none of the current verisons of CAB (commerical or freeware) support cookies. CAB 2.7 (coming soon to an Atari dealer near you) is suppose to and the latest CAB.OVL by Dan Ackerman has that support built in.

These items gotta go!!! I need the space!!! They goes
as follows:

Hardware: All with Manuals

* Atari SM804 w/Outburst..... $225
(Needs new drum and toner)

Hardware: No Manuals

* External disk Drive (Needs Power Adapter, Radio Shack) . $ 10

Software: All With Manuals

* Easy Draw ..... $ 10
* Degas Elite ..... $ 10
* Typesetter St ..... $ 10
* Stalker/Telecommunication Software ..... $ 20
* G+Plus ..... $ 10
* Migraph OCR/Optical Character Recognition Software ..... $ 10
* Mr Boston Official Bartender's Guide ..... $ 2
* The Juggler ..... $ 5
* Geneva/(Multi Tasking Program) & NeoDesk(Desk Top Prg .. $ 50
* Hyrid Arts Semte Track w/sync box ..... $ 75

Software/No Manuals:

* Hybrid Arts Ludwig Music software ..... $ 3

Games: All with Manuals

* F-15 Strike Eagle Flight Simulator ..... $ 10
* Elite/A Fantastic Voyage ..... $ 10
* Defender Of The Crown/Knight Fight ..... $ 10
* Knightmare/Knight Fight ..... $ 10
* ShadowLands/Barbarian Fighting ..... $ 10
* Barbarian/Fighting ..... $ 10
* Lemmings/Maze and Building ..... $ 10
* Ultra V Warrior of Destiny/Knights ..... $ 10
* Baby Jo/Baby Super Hero ..... $ 10
* Drakkhen/Dragons ..... $ 10
* The Pawn/Good and Evil Fight ..... $ 10
* Dragon Of Flame ..... $ 10
* Breach ..... $ 10
* Time Bandit ..... $ 10
* Quest Glory ..... $ 10
* Romancing The Throne ..... $ 10

Games Disk only:

* Dragon Master ..... $ 5
* Rambo 3 ..... $ 5

Programing Software & Book Combination:

* Mark Williams C Compiler/4 Disk/ and Update (2 Disk)
Mark Williams C For The Atari ..... $ 25

* CSD C Source Debugger1 Disk
Mark Williams CSD C Source Debugger For The Atari ST ..... $ 20

Programing Books:

* Prospero C, Language, AES Bining, Library, VDI Binding . $ 25
* Atari ST Internals/The Authoritative Insider guide ..... $ 10
* Atari ST Graphics & Sound/Mastering Capabilities ..... $ 10
* Peeks & Pokes/Hidden Secrets with in the Atari ..... $ 10
* Atari ST Application Programming ..... $ 10
* Atari ST Gem Programmer Reference ..... $ 10

Software Books with no Disks:

* Mark Williams resource Editor For The Atari ..... $ 3

Willing to work on package prices. Buyer(s) pays postage!! All reasonable offers will be considered!!!

You should format the disk on the PC. Do not use any folders or long
filenames on the disk.

Try formatting and copying the files in DOS mode rather than Windows.

Nick

Win95 writes something to the disk to make it take long file names. Even if you
just read the disk under Win95. Do your transfers under DOS and you should be
fine. Formatting under DOS is a good idea too. Just beware the Atari can't tell
if the disk was changed or not with DOS formatted disks.

I think he meant as a Karoke midi file. Midplay displays the lyrics in these files, and some keyboards can play midi files directly from disk. I don't see why they couldn't display the lyrics too. Modern keyboards you know.....

If you want to be able to play Karoke midi files and has got a Falcon you can
get MIDPLAY from SOFTJEE. MIDPLAY can play regular midi files and Karoke
files and display the text for you to sing. :-)

Take a look at: http://perso.wanadoo.fr/softjee/

Hi Charlie,

You'll see a few other familiar names around here too. Steve Hammond posts here often, as does Neil Roughley. I've seen a post or two from Sax, and I'm sure there are others in "lurk" mode.

You might want to alter your e-mail address when you post here. See how I added nospam to my name. You can alter it in any fashion you choose. This way the spammers won't get you onto their lists. They have programs that cruise the newsgroups looking for e-mail addresses to spam. You can change the address as you are editing the text of your letter.

Welcome to the newsgroups. Do a full group download 400-600k and you'll get a full list of all the newsgroups your ISP supports. There are some useful ones, and some rediculous ones. I can't believe what some people spend their time talking about. There are many that are nothing more than people calling each other names and arguing like a bunch of three year olds. It's amazing.

See you around.
Mark S.

4174. CAB 1.5

Newsgroup: comp.sys.atari.st

I used the demo cab 2.0 and D/Led the CAB 1.5. Today I decompressed it and set it up. I tryed going online with it, I connected to my isp with STinG and then in cab 1.5 I tried to open the URL http://www.yahoo.com

I get a dialog box saying error in read file '\'

what is this??? looks like I'll have to stay with 2.0, 1.5 doesn't even know I'm hooked up.

No, its true, sort of... the next batch of 060's will be based
on a smaller die size, because I suppose thats the technology
they've got in use these days. Not a new generation 68K chip
just a lower voltage part that consequently will be rated at 75mhz.

And as far as phase5 goes, I don't know why they are running out of
060 chips, I suppose they are mad at Motorola for changing the
distribution methods (must buy direct from Motorola now)... but
noone seems to be out of 060's here in the states.
GVP-m sells 060 accelerators. Quikpak has got them.

Want a used 060? Try http://nrex.net/dimensions/

Hi.

>Sounds like TOS 6 which the Milan guys are working on and the computer sounds
>just like the computer Milan which the same guys are doing.

Just to clear this: The German Milan GbR holds all the rights for the TOS, yes.

The version that will be delivered with the upcoming Milan (Start: 15th June)
will be version 4.5, which is a special version for the Milan's hardware (it's
full of features that are nearly unusable on other machines like the
Falcon (PCI-support, support for graphic cards etc.)).

But TOS 4.5 is certainly not the end of the line, a new TOS 5 or TOS 6 will
be available even for TT and Falcon with lots of new features. Please don't
ask for a release-date, I don't know one.

Also delivered with the Milan is the Milan-MultiOS. It's a multitasiking OS
that needs MinT.

Also: Smurf is great, I'd get a demo, if I were you ;)

And: The English website will be up soon.

Thank you Thomas for all of these informations. But somes questions come to me:

- Now that atari is in fact over, Milan-computer can be considered as the new TOS leader, able to release a TRUE officially TOS version (with a reference number) as Atari did ?

- Does milan and Hades are very different, for the PCI, ISA, etc...In fact, drivers, and 68040 applications could be run on the both machine ?

- Magic 5 could be used with milan ?

- when Milan will be available in Germany, France,....?

4181. Apple LaserWriter Pro 600

Will these TOS updates for the TT and Falcon support the Nova graphics card as
well so there will not be any need for that emulator.prg? I guess you will fix
a few problems with AB040 cards in Falcons as well while you are at it?

> >Also delivered with the Milan is the Milan-MultiOS. It's a multitasiking OS

Hi Atari Fanzz... :)

I would like to use my atari 1040 STE to do a little RTC server.

Is anybody know or have informations about how doing a bell detector cable
on the joystick port of the atari for using software like the
excellent Stut One server from F.Planque ???
->http://www.planete.net/~fplanque/Stut-One/index.html

Thanks ...

4185. Articles/Programs wanted for ST Informer

Newsgroup: comp.sys.atari.st
Date: 1998-05-29 00:00:00 UTC
From: stirrell@portland.com
Message-ID: <stirrell-2905980847010001@portland15.portland.com>
Source record: 100059

Hello all,

First of all, please be sure to check out the ST Informer web page starting on the first of next month for the new issue. It has been significantly improved over the first issue in terms of presentation (not hard, I know).

I just want to encourage people to submit some articles to the magazine. Some rgeat people already have (thanks so much!) and more have promised to do so.

We really need:

Reviews of new products (if you are an author of a product, consider sending us a review copy to let people know about it!)

Atari Portfolio, Lynx, 5200, 2600 material

News (again, send your press releases to us)

Letters (please tell me what you think)

Tutorials

A Milan (anyone want to donate one ;-))

A few other ideas I had were columns for programming, HTML, etc. I'd also like to see a monthly review of Atari web pages (maybe one or two).

Thanks a lot for any help.

Sincerely,
Scott Tirrell

Errmm .. I'm not totally sure what happens at their end but at least
PCs understand MIME. They may have to press a button to cause the
decode to happen.

> If not, being completely PC illiterate, what do I tell them to do?

Perhaps someone else will say what actually happens on the PC but the
recipient may need to say 'OK' to an 'Extract' or 'Decode' dialogue.

Apart from the 'PC compatibility' argument I think it a good idea to stick with MIME as I have had troubles occasionally getting a file UUE-encoded. It appears to go through the motions but then the message pops up with zilch appended.

Who knows? :) Using PC File Exchange on Spectre, I find it helps to let
the "Mac" format DOS floppies.

Cross-platform floppy use is 90% voodoo. The rest is "just what works". :>

Pah! Amateurs stuff. Why, when I were a lad (well, about 8 years ago), I had to trigger some samples in a sequence I was running on Notator. Just one teensy weensy problemo 0- no sampler.

What I found, however, was that by hooking up the audio output from the STe to the amp, and using softlink with Replay 8 in a different "partition", we could hook the MIDI leads through the THRU on the keyboard, and back into the in on the STe. By starting the song in the Notator "partition", then switching to the Replay one (song carries on playing - no glitches at all), we could actually trigger Replay. And it worked.

Now _that's_ solid timing for you.

BTW, to add something to the original question - I use Logic on a Falcon, and am very impressed (though it can run slow at times, but the MIDI output is pretty stable). However, I also still have a copy of Notator (with the dongle), which I use on an old ST sometimes because I also have Unitor and Human Touch. I.e. I have the wonderful ability of making my MIDI stuff synch to the drummer, rather than vice versa.

In fact, for stuff I've written in Logic which uses Logic features, and won't transfer well as a SMF, I've even been known to synch Logic to the ST running Notator as master clock, which in turn was derived from the Human Touch input.

I guess this is all a vote for Notator/Creator. Or Logic. If an ST handles it okay.

The original palmtop computer! Atari Portfolio runs MSDOS programs and has built in organizer software to manage your contacts and appointments, as well as a text editor and lotus-compatible spreadsheet! This package includes:

* Atari Portfolio and manuals
* Portfolio AC adapter
* Portfolio Parallel port adapter (allows you to connect to a desktop PC or Atari and xfer data)
* 64k RAM storage card

All in excellent condition! Functional and collectible, this is a must-have item!

Buyer pays shipping. Payment to be made in advance via certified check or money order; no COD.

I'm surprised to hear that. I've never had it crash on me in almost
10 years of use (staring with the original KCS). I almost never use
the Song editor though.

>>Not really the most user friendly.
>
>Yep, it is annoying that you have to switch between different modes while
>putting the song together.

Maybe, but the different modes are what gives it such amazing
flexiblity. I always work in Open mode with a control sequence after
laying down the basic tracks in Track mode. I'll use Tiger to tidy up
individual tracks.

The open mode control sequence method provides wonderful control over
your material in a compact work space. Often a whole composition can
be laid out on one screen or less.

There's a steep learning curve with KCS. The reward is virtually
unlimited manipulation of your music.

The LaserWriter pro 600 has got an centronics parallel interface so you
can plug it to your Atari. It can interprete PostScript Level 2 and PCL
4+ so you can use NVDIï¿½s PCL driver (HP LaserJet 4P/5P) and print your
documents with 600dpi.

Enjoy this fabulous printer!

Hi Bernd-Paul!

b> Organization: Technical University Berlin, Germany
b>
b> Does anyone know a possibility to connect and
b> SLM804 to a 68040 Macintosh ?

You cannot connect the printer directly, but if you still have an ST then you
can print via that using either a null modem link or from a disk file
(assuming an HP 300dpi driver that can have its output diverted to a file or
to the serial port on the Mac).

Get the necessary file MagicSLM from http://www.cix.co.uk/~derryck/

p> ISP speed is?

I set my modem to report the actual connect rate rather than the serial port
speed - this should work for you too.

p> Does the Serial CPX set both of these at the same time?

No, the serial CPX sets the port speed, the modems negotiate the best speed
possible between themselves during the handshake period.

You should try to set the serial port speed to be 4 times the top speed of
your modem for the best results but that is a counsel of perfection! ;-))

Sorry to butt in, but I didn't see the original post. According to
Wizztronics, Hasbro still holds all the rights to TOS. The claim that
German Milan GbR holds the rights was made before the JTS/Hasbro sale.
Ummm. What other posibility is there? Maybe, Atari Germany let go of
the rights to the German version of TOS? Does that mean that the
machine will only be available with TOS/G? But Atari Germany and Atari
U.S were one in the same as far as ownership goes, right?
Whatever the case, U.S. legal or not, give me one with an 060 and
drivers for a PCI digital video card, firewire and supporting
software, and i'll take it. While they are at it, they should also look
into supporting Quicktime. This is definetly going to play a factor in
the future of digital imaging, digital audio, and other forms of
electronic expression.

On a Falcon, the video mode is much more relevant to this reliability than
the choice of operating system. I guess you're not using the True-Colour
mode, or the highest available resolution ?

> ISP speed is?

As usual, there is a question/answer for this in the "frequentlay asked
questions" part of the docs. You didn't read it, did you ? Whom do you
think I wrote that for ??

Most modems can be configured to either report the DTE (computer)
or the DCE (phone line) speed. See your modem manual on how to switch
it to report the DCE speed. (Ah, a manual again, do you remember what
you're supposed to do with it ?)

> Does the Serial CPX set both of these at the same time?

No. The CPX sets only the DTE speed. The DCE speed is negotiated by
your and the ISP's modem each time again.

>>With earier versions of STinG, 115200 was not stable, but that's ancient

Which speeds are "stable", and which are not, is entirely up to the machine.
It does not depend on STinG. An ST is to slow for reliable 115200 bps (the
serial port can be upgraded to that speed). For Falcons this is the same
if they are used with high-performance screen setups (resolution and colour
depth) since the CPU is slowed down. 115200 bps does not give problems on
TTs, Medusa / Hades / Milan can do 230400 bps easily.

This is assuming proper serial reception routines (for instance HSMODEM)
are installed.

>>history. I have no problems with a 56Flex at 115200 using STinG on my Falcon,
>>except my phone lines drop me to v34 (33600 baud). I do get the compresson
>>to kick in, however, so I can get downloads with CAB v2.5 up to 7000cps
>>(nominal) with one of my ISP's. That's the equivalent of 56k baud. My
>>home wiring is thirty years old. To get 56k to work properly you need to
>>be within 2 miles of a SO (switching office). Nasty, eh? Ahhh, your using

Even more, the other side needs to have the corresponding kind of server for
56k modems. Chances are they haven't got any, or the wrong kind (up until
very recently there were two incompatible standards for 56k modems). The
age of the wiring on the other hand plays a very minor role in this.

Cheers Peter

Ever tried Altavista or other search machines ? Try
http://www.altavista.digital.com

When asking Altavista for Infitra, it tells me to go to
http://www.studio9.demon.co.uk/infitra/index.htm

Greetings;

I have 2 systems and misc. stuff for sale as follows:

1 Mega 2, Tos 1.4 colour and mono monitors
sh204 hard disk

Works great! - $150 for the 4 items.

1 Mega 4, Tos 1.4 16mhz accellerator mono monitor
2 megafile 30's

Works great! - $250 for the 4 items.

Pick up preferred - located in Owen Sound, Ontario Canada.
Some software bundled in - email for details

Regards,

Willard.

The 060 is no great shakes. I have one in my Amiga. It just isn't
enough. I would keep an eye on their PowerPC developments, then
maybe you'll have a machine to do Quicktime justice.

Good news about PCI slots though. My Amiga doesn't have that, and that
is part of the problem...

Hi,

There are hundreds of programs for making music and listening
to music which you can download at
http://www.hitsquad.com/smm/atari/

There is mainly ST software but there's also some for the
Falcon.

The site has software for midi, MOD, audio, recording,
multi-track, MPEG, soft synths, drum machines, guitar tuners,
samplers, patch editors/librarians, mp3 players, sequencers,
algorhythmic composition, and heaps more.

cheers,
jason.

> ^^^^^^
>PNG 12.5 NS NS 12.0
>
>Note: NS = not supported

^^^^^ = "we know about this one, now"

Hi again,

just fetched GVW-PNG from this belgian site, and to satisfy everyone (this time, before complaints start pouring in) I ran the test again with the Gemview PNG module:

So the time for Gemview reads 34 seconds.

About Gemview, what *was* the latest version? I've got this GVW_V317.PAX here (came from GVIEW317.ZIP), I'm sure I installed it, but my Gemview prg still says: version 3.16... Anyone knows the answer?

BTW, I'd like to add that in my opinion it's not very relevant to compare viewers vs. processors... let me explain:

The viewer I'm using is just to VIEW piccies. In the CAB set-up this one is linked as the external viewer. Everyday I fetch several weather pictures from various sites, these come in as JPG or GIF. Once in, CAB kicks in the viewer to display them, hence speed is important. So Graftool still is my choice, also because it supports lots of formats and the program loads faster than Gemview.

OTOH, stuff like Photoline, Digital Lab (and Smurf?) is not mainly used as a viewer, but as a processor, so the import time is not all that important...

When I'm gonna touch up/process images, I don't really give a sh.t for speed/better speed/still better speed; I'd like to sip my coffee every now and then or light up just another fag...

4228. FS: 520 ST System

Newsgroup: comp.sys.atari.st
Date: 1998-05-30 00:00:00 UTC
From: tuf@cyberspy.com
Message-ID: <3570ef70.70730585@ntserver>
Source record: 99903

For sale...a very weird 520ST system:

520ST (original version)
2 megs RAM on a 4 meg Newell upgrade board
TAB card installed (disabled..no 2.06 ROMS)
Slim Desktop PC case
ICD ST/HA + Clock
Omti SCSI/RLL converter
Seagate ST157N 150 Meg Hard Drive
SC124 Mono Monitor (if you need it)
2 720k internal drives

The system works fine..all the equipment is in new condition
(honestly). The 520 is stuffed full of upgrades. The case will
support many more devices (2 full 5.25 inch bays and 1 3.5 available).
The case is also wired up to support floppy drives. All connectors
are on edge cards so all wires can be disconnected from the case. You
add a 1.44 floppy or use one of the larger 720 (half height) drives.

Its a complete setup..the HD is loaded with software. Ill throw in
every other random piece of ST hardware I have (drive mechanisms,
cables, tweety boards, etc) with the deal.

Im interested in any offer so let me hear what youre thinking.

Thanks, Joe

Open the group window.
Click on the group you don't want.
Click on 'Unsubscribe' (either in tool bar or menu).
'Save' the group file. (A lot of people forget this step!)

4231. Help With Cubase Audio Falcon

Newsgroup: comp.sys.atari.st
Date: 1998-05-30 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6kp1en$fpm@news.Hawaii.Edu>
Source record: 99906

Greetings,

I purchased Cubase Audio some time ago, but have never gotten it
funtioning properly. The basic problem is that the Mixermaps for audio do
not seem to do anything. If I record a stereo audio file and want to play
it back in stereo, I cannot figure out how to pan one channel to the left,
and the other to the right. The Mixers for Reverb, Chorus, Graphic, and
Filter do not have any effect on audio playing back on any channel.

I've read the very old manual that accompanied CAF, although I
suspect it may be incomplete or at least not current.

Can someone help me? Any assistance would be greatly appreciated.

Aloha,
John Perez - jperez@hawaii.edu

4232. Adding GIF Comments

Newsgroup: comp.sys.atari.st
Date: 1998-05-30 00:00:00 UTC
From: Neil Roughley <roughley@HORMEL.unix.dsoe.com>
Message-ID: <FN_356ff226_roughley@news.dsoe.com>
Source record: 99907

Is there a program available that will add text comments to a GIF like wrjpgcom.ttp does for JPEGs?

I've looked at the official GIF 89a specification and read how comments are handled. Although I'm not a programmer, it seems to me that such a utility wouldn't be all that difficult to create (easier said than done, of course). If no program is available, would someone want to take on such a project?

Okay, I just got this E-mail from Anodyne Software (Roger Burrows).

Exciting news! ;-)

PS I cut out the binary attachment, but if you want me to I'll extract
it and upload it in a separate posting. You can get the same info from
their Website, however... ;-)

Dear ExtenDOS Pro user,
We at Anodyne Software are pleased to announce the immediate
availability of two new products, ExtenDOS Gold and CD Writer.

* ExtenDOS Gold is the follow-on to ExtenDOS Pro, with many
additional features for all CD-ROM users.

* CD Writer provides an easy-to-use interface for the creation of
your own audio CDs.

The combination of ExtenDOS Gold and CD Writer is the best way to
create CDs on your Atari!

Upgrades from ExtenDOS Pro are available at a significant saving;
please see the attachments for more details, or visit our web site at
http://www.cyberus.ca/~anodyne, or email us at anodyne@cyberus.ca
with your questions.

Your CD-ROM specialists,
Roger Burrows / Anodyne Software

Anodyne Software Email: anodyne@cyberus.ca

It should be possible, at least on a TT.
However, some providers might require an Ethernet card for this,
in which case you'll need a Riebel Ethernet car for the TT.

4239. Cubase Audio Mixermap Request

Newsgroup: comp.sys.atari.st
Date: 1998-05-30 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <6kp7q1$jf0@news.Hawaii.Edu>
Source record: 99914

Greetings,

After many many hours of experimentation, I have come to the conclusion that my Cubase Audio - Audio Mixermaps (Graphic, Reverb, Chorus, Filter, Sixteen) are whacked. I was able to set the outputs on each of the knobs and sliders in the Reverb map to DSP, and now it functions (it sends on channel 8?) In any case, I still cannot figure out what the correct object settings are for all of the rest of the maps (after setting the 80 plus objects in the Filter, along with all of the rest to 8 and DSP).

Would anyone be so kind as to email their working Audio mixermaps to me?

Aloha,
John Perez - jperez@hawaii.edu

Source record: 99915

Hi.

>PowerPC??? Sure?

I wouldn't say this is an impossible solution for the future, but first of all we have to develop a strong base for TOS-computing again, before looking further to a PPC (or whatever).

You're right when you say that the architecture isn't the biggest problem, I guess. But remember you have to develop a new TOS for the PPC and even the applications must be released in a special PPC-version.
The Amiga-market shows that this is a huge problem for a relatively small market. And even Apple needed a long run.
Noone will develop applications for a market which isn't strong enough to give back even the efforts for developping new software.

So our first target is to give the market a machine on which the existing applications run in a modern speed. If the market develops again, we can go on.
The Phase5-PPC-cards are a great possibility, in my PERSONAL opinion.

I have a selection of Atari ST titles for sale.

This List Updated 30/5/1998.

email: steve@steverosie.demon.co.uk

I'm looking out for the following, possible swap, part exchange etc...
Atari CD ROMS, 16-bit sampler cartridge/hardware etc...

All are on original media.

Key:
ds = double sided disks
ss = single sided disks
?d = number of disks
meg = one meg of memory or more needed
ni = no instructions
nb = no box
NSTE = Not STE compatable

Please Note The Key Codes Are Only There For Guidance, I cannot be
responsable for in accuracies.

>>>>>>>>>> All prices are in UK Pounds (sterling) <<<<<<<<<<
^^^
Prices DO NOT include postage.

**********>>>>> Disk Bundle <<<<<**********

Lemmings 2 (1d,ds,1 meg), Archipelagos (1d,ss,),
Black Lamp/Outrun (1d,ds), Test Drive (1d,ds),
Fantasy World Dizzy (1d,ss) & International Soccer (1d,ss)

All the disks are on original media, but have no instructions or boxes.

All 6 disks above for only 5 UK pounds INCLUDING postage.

****

GAME COMPILATIONS

Hollywood Collection (5d,ni) 5
Ghostbuster II, Indiana Jones and the Last Crusade & Robocop
TNT (4d) 5
Xybots, Toobin, APB, Dragon Spirit and Hard Drivin'
Finale (4d) 5
Paperboy, Overlander, Ghost'sn' Goblins
and Space Harrier (20 levels)

The Dream Team (5d, ds) 5
The Simpsons - Bart v' The Space Mutants, WWF Wrestlemania and
Terminator II 'Judgement Day'
Atari 520STE Discovery Xtra Pack 5
Language Disk DE1 (ds)
Final Fight Disks DE2 & DE3 (ds)
Sim City/Escape from the Planet of the Robot Monsters (ds)
9 Lives (ds)

SPORT TYPE GAMES

World Championship Soccer (1d,ds,nb) 2
Ballistix (1d,ss) 2
Superleague Soccer (1d,ss) 2
T.V Sports Football (1d,ss,nb) 3

>
version 2.7 of CAB (which according to System Solutions will have
its English version released fairly soon) does support cookies with the
proper CAB.OVL; Dan Ackerman's OVL for STiK/STinG has that feature, and
I would imagine the OVL for I-Connect will support that too.

Charlie,

While the newsgroups window is open in Newsie, I just clicked on the desired group, selected unsubscribed, and it disappeard from the list. I don't remember if I was connected to the host or not. You can try it both ways.

As you can see, this post is coming from Newsie88! <G>

Ken

PS - Sure is tough keyboard navigating here when you are used to ST Aladdin on Genie, isn't it?

No doubt it is a separate task. Thus it wouldn't surprise me in the
least to be told that as such it is making use of the pagefile!!!

Hi.

>- Now that atari is in fact over, Milan-computer can be considered as the new TOS
>leader, able to release a TRUE officially TOS version

We have all the rights to develop new TOS-versions, yes.

>- Does milan and Hades are very different, for the PCI, ISA, etc...In fact,
>drivers, and 68040 applications could be run on the both machine ?

Milan and Hades do use the new PCI-XBIOS, which makes it possible to
use the same PCI-drivers on both machines.

>- Magic 5 could be used with milan ?

No, not yet.
ASH would have to release a new version for the Milan, because MagiC really
depends on the hardware, just think about how long it took for MagiC to run on
a Falcon.
But I hope ASH will release MagiC Milan soon.
Drop ASH a line, if you're interested in a version for the Milan.

I've purchased and installed CAB 2.5 and PPP-Connect.

I'm confused - nowhere in the docs does it say that PPP-Connect only works with Magic, but I'm sure I've heard that somewhere?

I use Geneva & Neodesk. I have no problems connecting to my ISP using PPP-Connect BUT can't do anything after that! CAB does not seem to recognise the connection and if I run GET_IP.PRG it never ever returns with an IP address and I have to reboot.
[Yes, CAB.OVL is in the correct modules folder].

Anyone got any idea what the problem is?

Please?

(I have given up trying to get STinG to log on, for the time being anyway).

This great collector's item FREE for the asking:

Atari 800
Atari 800 5-1/4" floppy drive
Atari 410 Program Recorder
and all the transformers that run this stuff.

I found this computer under the bed while cleaning house the other day. Really hate to throw it away if someone would like to give it a new home. You only pay the shipping from Orlando, FL and it's YOURS!

> hesitate to tell me! Thanks in advance... ;-)

1. KGMD isn't in English - that's what KEMD is for. If you've found
the German version (hense the G in KGMD), you've found what you need.

2. I found out the hard way that if all you want is a Mint to run a
multitasking AES on, KGMD/KEMD isn't what you'd want. The KGMD/KEMD
sets up MintOS, which is a Unix type text-only environment. But if
this is what you do want, then great! You've got it!

Best of luck to you!

William, well one word, Congratulations. You've done a very nice job.
MIDI works very well, well under MiNT it gets cut every X msec, but
well. it does work.
I have looked for the GUS patches, A LOTSA them and in ARJ format :/

PPP connect does need magic i'm afraid. You will need to get STing up
and running if you want to use CAB with geneva. STing is not much
harder to set up than ppp connect and people here I'm sure will help
you if needed.

Cheers

Hi there Chris,
I too had given up on STinG and decided to use the PPP Connect that
came with the CAB 2.5 disk. I did indeed end with the same results that you
are getting. Never did to get it to work. I got ahold of Charles Silver on
the net and he helped me to get STinG to work. This is now what I am using.
If you would like, I would be more than happy to pass along the information
that he had given me and you should be able to place your user ID and
password in the correct places. That should get you up and running. I know
that trying to get this mess all setup is really the pitts. If I can help
you out please drop me some e-mail

Regards David Moore

4276. Problems with using CD-ROM under Magic

Newsgroup: comp.sys.atari.st
Date: 1998-05-31 00:00:00 UTC
From: dbolt@my-ste.demon.co.uk
Message-ID: <896649321.9130.0.nnrp-09.9e98f145@news.demon.co.uk>
Source record: 99858

-----BEGIN PGP SIGNED MESSAGE-----

I'm looking for help with a bit(?) of a problem that I've got when using Magic 5 and Spin v0.32. I've just got my hands on a NEC 3x CDROM (CDR 500) and got it nicely installed and accessible. The problem is that when using it to read the CDs I've got, I sometimes have Magic stopping dead with a 'System Stack Overflow' error, requiring a reset and restart of Magic.

The error occurs whether there are or aren't any other programs running at the time I access the drive. Sometimes I can access several folders, sometimes I only need to go into a single folder before it happens. Anyone have any ideas as to how to stop this.

As a side issue to this, anyone know how to get CD_Player 1.4 to recognise and play audio CDs on it. I've tried CD-TEST.TTP (from CDREC.ZIP) to see what it can come up with and it says no CD-ROM driver is found. This could be a configuration error, but I can access data CDs, subject to the above problem.

Just in case it it, here's my config.sys file for spin:

; Beispielkonfiguration f�r SPIN!
;
; List it as ASCI ID: 4.
;
*BOS, C:\AUTO\SPIN_SD.BOS, A:4
;
; Install it as logical drive Z:
;
*DOS, C:\AUTO\ISO9660F.DOS, Z:A

>you if needed.

Not true. PPP-connect *doesn't* need MagiC to work. If you've a
pre-emptive multitasking system like for instance N.AES it should
work.
Geneva is a co-operative multitasking system but if you run MiNT on
top of it you'll get a pre-emptive MS.
Some time ago I was able to use PPP-connect with a Geneva/Thing/MiNT
setup. Unfortunately for some dark reasons I can't use it anymore.
Sure I can still make a connection but like Chris Cab seems not to
recognise the connection.
I think you'll be better off with a Sting setup. Like Niall says it
isn't that difficult to get STing up and running.

>1. KGMD isn't in English - that's what KEMD is for. If you've found
>the German version (hense the G in KGMD), you've found what you need.

True. The KGMD package is all German but with the help of the English
docs of KEMD is isn't that difficult to get it working. I, probably
the greatest computer dummy on earth, could set up KGMD so ....:-)
The most Atari related ftp-site have this package. But be aware
it's huge package.

> The KGMD/KEMD sets up MintOS, which is a Unix type text-only
> environment. But if this is what you do want, then great! You've got
it!

Not true. You can set up KGMD so that one can work just like one
is used to do under normal TOS. Sure if you like you can use these
text-only utilities and I must admit there are some very good ones but
again you don't need to work with them.
A final note. If you only have 4 mb RAM it's better to use the TAF
package instead of KGMD. KGMD consumes lots of memory.

BTW: If you only need MiNT and not the MiNTnet part you may consider
to build the set up from scratch. Installing MiNT isn't difficult at
all.

Toad no longer has any Atari software! All was recently sold. What
you need to do is get a refund, as they will never get you the upgrade now.
Oh, you'll need your disks back too!

Aha, you use a Nemesis board. I'm sure a nemesised Falcon is fast enough
to cope with 115200 bps easily. Maybe I misunderstood, but your message
looked to me as saying "Look, my Falcon does 115 kbps without problems,
so should yours." which will create confusion for people without a Nemesis.

> I don't get any difference in STinG downloads with using TC than with
> other resolutions. I'm sure other Nemesis users can confirm this.

I'm sure they can. Does the Nemesis decouple the CPU bus from the video
bus ?

For ISDN ? You're kidding ! Maybe you're confusing it with cable modems ?
For those you usually indeed need an ethernet adapter.

An external ISDN terminal adapter (no it's *not* a modem) can be fitted to
any Atari machine. I definitely know STinG works well with it. That should
be true for other stacks too.

Cheers Peter

4285. EZ135 DRIVE NOT RECOGNIZD

Newsgroup: comp.sys.atari.st
Date: 1998-05-31 00:00:00 UTC
From: dave.gostl@i.hate.spam.com
Message-ID: <8F0240A.036300EF58.uuout@i.hate.spam.com>
Source record: 99867

Hi All! I'm having problems with my Falcon's int IDE drive. I've decided to just replace it. But all of a sudden I can't use the EZ135 SCSI drive. It spins up and down and ejects no problem. The green LED turns yellow for a sec at bootup, also normal. HDDriver 4.61 dosen't recognise it anymore. Can this be related to the IDE's impending failure? Or could it be a HDDriver problem? I didn't mess with HDDriver's setup before this happened.

Thanks for any ideas.

Well, the title says it all really. I've gotten the KEMD R2 archive, but I can't seem to find the English version of KGMD. Anybody know a good (do be exact please!) ftp/Web site where I can D/L it? Also, if you know of any other "necessary" files that I would need to install MINT please don't hesitate to tell me! Thanks in advance... ;-)

Sorry for the delayed reply - I've been doing impersonations of a gardener,
electrician, plumber, decorator ad accountant during holidays from work ...

Wrt this last bit, I take it that TransAction aren't only asking for help
with translations of shareware supported programs? Is that right?

Are all translations sent back to the authors for distributon or is there a
Web site from which we can obtain translations seperate from the programs
themselves?

Is there a TransAction web site at all?

I think I know what's causing your problem. I've been through it
myself a couple times. It will take a bit of typing to get you
through it, but you have to do a little editing of the mixer maps. I
don't have time right now, but send me some e-mail, or post this
question again to remind me in a day or so, if I haven't posted about
it, and I'll walk you through it.

I did such experiment many times - every time with the same result.
"Check mail" and "Get mail" starts immediately, "Send mail" with 30 sec.
delay.
May be it depends on the configuration of mailserver?
Or may be the reason is that I am connecting to my mailserver not
indirectly but by means of access server of Polish Telecom?
I can't check it because at my ISP I have only a terminal account and
if I want to use PPP-mode I have to use access by Telecom.

I don't think so. Most of the time I use a MiNT/mintnet setup for my
Internet connection. With this setup there isn't any delay. From time
to time I do use STing however and here I notice a send delay of
approciately 30 sec. indeed.
I only tested this with Popwatch and Mymail.

Hi.

>But here in the USA, the many ISP's I've
>connected to, STinG downloads faster with CAB

I see no big difference with CAB at the moment, but FTP is much faster
with aFTP than with Fiffi (comes with CAB). But I think that's a problem
of Fiffi.
I have to use STinG on the Milan, because MagiC doesn't run on it so far,
and so STinG is the best solution IMHO.
That's the biggest problem I see with I-Connect: It needs MagiC :(

>Does I-C support PAP protocol?

It does.

>Overall, I must say that Peter has done an marvelous job.

I totally agree, I would even pay for a commercial version ... but don't wake up Peter ;)

>Think about that for a second.

As I said: I do like STinG, but work with I-Connect on the Falcon, because it's
pre-configured for the German provider T-Online and works very well with it.

>Well, a Falcon compatitable TOS v6.0

TOS 6 will be available for TT and Falcon also. Believe it or not ;)

> Falcon060 Laptop clone

Interesting idea, but I think developing a laptop is an expensive thing to do.
I don't think we'll think about a Falcon-Laptop, maybe a Milan-Laptop would be nice.
But who knows, those plans belong to the future, so I didn't want to spread rumours
here ;)

>Better when I can read it in Englisch

I hope the English pages are up soon (should have been up already, but everyone is
too busy at the moment).
